It is no impossible claim that, in a wise and well ordered community, education should be the central interest. Nature has ordained that the care of the young should be the prime responsibility of parents, and it is recognized that among human beings this care should extend over a long period. In these days of highly specialized function, law and custom have provided that children should be handed over to the professional teacher for education. Some parents do this with joy, others with a sigh of relief, yet others with hesitation and regret. Long experiment has proved, however, that in the day school, at least, this is neither desirable nor possible.

The more clearly we see that education is not merely instruction, the more obvious it will be that nothing short of the united efforts of the whole community will suffice for the task of preparing the rising generation. No school, however liberally staffed, could ever hope to unfold all possibilities and give all the necessary individual attention. Parents and other members of the community are ready to share the task.

CORRESPONDENCE.

DETERMINATION OF THE RATES OF DIFFUSION OF GASES.

To the Editors of *The Journal of Education and School World*.

DEAR SIRS,—The absence from the usual textbooks of any method of quantitative determination of the rates of diffusion of gases is the chief reason for thinking that the following outlines may be of interest to teachers of science. Most of us have been in the habit of depending on experiments showing changes in pressure inside porous pots for the purpose of illustrating the general phenomena, and of quoting Graham's Law of Gaseous Diffusion without any serious attempt at verification. The method described here will, I think, show that this is unnecessary.

The essential feature of the apparatus is the glass jacket-tube surrounding the porous tube (made of the stem of a clay pipe), of which the portions projecting out of the rubber stoppers are rendered non-porous by shellac or rubber. The length of the porous tube within the jacket is about two inches. In the diagram the apparatus is shown attached to a voltameter containing dilute sulphuric acid, so that hydrogen and oxygen in known volumes can

AB, porous tube; C, glass jacket tube; D, E, graduated collecting tubes, containing explosive mixture of gases.

be passed through the outer and inner tubes respectively. A regular flow of gas through both tubes is necessary. The exit tubes are arranged so that bubbles of gas in them are as nearly as possible under the same pressure. This can easily be done by seeing that the depths of the ends of the tubes under the water in the collecting trough are the same. The tubes should also be as nearly as possible of the same cross-section and general form, so that equal facility of exit is offered to bubbles.

To set the apparatus working a current of about $\frac{1}{2}$ ampère is passed through the voltameter, and the evolved gases are allowed to pass freely through the two tubes till the air is expelled and a state of equilibrium in the composition of the issuing gases is reached. About fifteen minutes will generally be sufficient time for this to take place. Bubbles of gas may then be collected at each exit tube, and tested with a lighted splinter. Explosive gas will be found to be issuing from both tubes.

Without disturbing the positions of the exit tubes, place the graduated tubes over the issuing bubbles at the same instant, and allow them to collect. It will be found that more gas will collect from the tube connected with the oxygen generator than from that connected with the hydrogen generator of the voltameter. When sufficient gas has collected, withdraw the two collecting tubes at the same instant. Measure the gas volumes and record the temperature and pressure. The contents of one of the tubes may be analysed, and from this the contents of the other may easily be deduced, since the composition of the original gases is known, and the total volume of gas collected. (Alkaline pyrogallate is safer and quicker for the analysis than phosphorus.)

Example.—22 c.c. of gas collected from hydrogen tube and 39 c.c. from the other. Total = 61 c.c., of which $20\frac{2}{3}$ c.c. = oxygen and $40\frac{2}{3}$ c.c. = hydrogen. (Time taken, about 14 minutes.)

An analysis of the 22 c.c. gave 16 c.c. hydrogen and 6 c.c. oxygen. Hence $(40\frac{2}{3} - 16)$ c.c. of hydrogen diffuse in the same time as 6 c.c. of oxygen.

i.e. $24\frac{2}{3}$ c.c. hydrogen in the same time as 6 c.c. oxygen, which is nearly in the ratio 4 : 1, as required.

Other gases may obviously be used with the diffusion apparatus. Thus, when carbon dioxide and hydrogen were passed through the outer and inner tubes respectively, 10 c.c. of gas were collected

from the inner tube and 50 c.c. from the outer tube. On treatment with caustic soda, 6 c.c. of hydrogen were left from the former and 22 c.c. of hydrogen from the latter. Hence 4 c.c. of carbon dioxide had diffused into the hydrogen-carrying tube in the same time as 22 c.c. of hydrogen had taken to diffuse into the outer tube carrying carbon dioxide. Hence—

$$\frac{\text{Rate of diffusion of hydrogen}}{\text{Rate of diffusion of carbon dioxide}} = \frac{22}{4} = \frac{5.5}{1}$$

According to the Law of Diffusion the ratio should be $\frac{4.7}{1}$ and the difference is probably due to error in determining the comparatively small volume, 4 c.c., of carbon dioxide. If larger volumes are collected there will be less liability to this source of error. The water in which the gases were collected was saturated previously with carbon dioxide, so as to avoid loss by solution during the collecting process. Thus it can be seen that the Law of Gaseous Diffusion can be verified with simple apparatus capable of easy manipulation, almost as readily as Boyle's or Charles's Law. Burnley Grammar School. E. J. SUMNER.

READING AND EDUCATION.

To the Editors of *The Journal of Education and School World*.

SIRS,—Thank you for the friendly notice in your issue for August of an article entitled "A Liberal Education in Secondary Schools," which appeared in *The Parents' Review* for July last. Sympathy, with certain reservations, would a few years ago have been my own attitude towards the claims made in that article, for I did not fully perceive that we were acting on general principles until elementary schools took up the work indicated, and did "incredible things."

I am grateful for your sympathy with my plea for a course of wide and varied reading, and believe that you, too, would deprecate desultory reading as a means of direct education. "But," you add, "the necessary preliminary to such a course" (i.e., of wide and varied reading) "is, we think, the formation of the habit of intensive and concentrated attention which by no means comes naturally to the great majority of children, or even of adults." Now, what I venture to claim as a "discovery" is that attention— instant, concentrated, intensive—is not a carefully acquired habit, but a fully developed power, present, I think, in all normal children, and even in those who are stigmatized as backward or deficient. Practically every child is prepared to give the sort of attention a barrister gives to his brief (*trained* attention in his case), given the sort of "brief" proper to the mind at a given age.

This is so large a claim, that I should like to support it by reference to a unique pamphlet prepared by Mr. H. W. Household, (Secretary for Education, Gloucestershire). This gentleman has succeeded in introducing the work in question into between thirty and forty Gloucestershire schools. Early this year he sent out a courteously worded letter to the Heads of the twenty-nine schools then doing Parents' National Educational Union work, inviting frank discussion of the methods by themselves, their staffs, and even by children in their schools. Admirable letters *pro* and *con* resulted, and these, accompanied by his own comments, Mr. Household presented as a report to his Committee.*

This report sets forth the principles on which we work, as gathered by the teachers themselves, far more fully than I can venture to do in a letter. One point will strike readers of this pamphlet—that such work, even as modified for elementary schools, requires able and intelligent teachers, qualified for a higher rôle than that of the "forcible feeding" too common in the school-room. In the hands of the efficient teachers of secondary schools, it should bring about an educational revolution, for, in the last resort no doubt, everything depends on the teacher.

Again, exception is taken to the fact that, "up to the present Miss Mason herself has made the choice of books suitable for each age to secure the results she claims." This is an obvious objection and a regrettable fact, but a moment's consideration will show that a homogeneous scheme of education must needs proceed from a single mind. Even were the matter worked by a Committee, one member would necessarily act and the others be lay figures. The patchwork character of much educational work—a plan picked up here, an idea there, a good textbook elsewhere, is one cause of the futility which distresses us. At the same time I should say that teachers have the option of substituting another book here and there for the one set, but perhaps the more faithfully the programme is followed the more successful and delightful are the results.

The article, noticed in *The Journal of Education and School World*, is now issued as a pamphlet, which heads of schools seriously interested in the subject are invited to apply for (to the

Secretary, P.N.E.U. office). Thanking you, Sir, for allowing me to call the attention of your readers to a discovery in a region too little explored.—I am, &c., CHARLOTTE M. MASON.
House of Education, Ambleside.

R.A.F. CADET COLLEGE ENTRANCE EXAMINATION, 1920.

To the Editors of *The Journal of Education and School World*.

SIRS,—Is nobody going to protest against the relegation of science to the Optional Group in this examination? Surely the candidates could, without undue strain, add one more to the five essential school subjects required for a pass. They are to be lads of seventeen and a-half at least, and are competing for admission to one of the most scientific branches of the national service. One wonders if the science professors of the R.A.F. Cadet College, or any other scientific people, were consulted about this.

A HEAD MISTRESS.

A WARNING.

To the Editors of *The Journal of Education and School World*.

DEAR SIRS,—We wish to call your attention to a very unpleasant incident which occurred to the mistresses of a school at Halifax. Two separate callers demanded payment for an advertisement in "Methuen's School List." Both principals of the school denied all knowledge of the advertisement, and communicated with us. We were able to inform them at once that a fraudulent demand was being made upon them, but unfortunately it has not been possible to apprehend either of the men. We think it well to let you know of this at once, as you may be able to warn other teachers, who might otherwise become victims.

We ought to add that we publish no school list of any kind in which advertisements are inserted at any charge.—We are, dear Sirs, yours faithfully, METHUEN & CO., LTD.

36 Essex Street, London, W.C.2.

July 31, 1919.

FOREIGN AND DOMINION NOTES.

UNITED STATES.

Of the general "wonder and admiration" which, as Mr. Fisher lately said, our educational system is ultimately to excite we, well placed for seeing, have discerned abroad no germination. At home the evil effects of delayed reform grow daily more apparent. We ought to have had continuation schools long ago; and in them and in other schools there should have been taught that gospel of citizenship which America is now proclaiming with ebullient zeal. Thus, the *Historical Outlook* (x, 6) publishes a series of six articles on "Teaching Citizenship." In like manner *Religious Education* (xiv, 3), asking for the co-operation of the churches, treats of "Education for Citizenship in the Church School"; whilst five other papers in it relate to the "Education of the Adolescent for Democracy." The young, says the writer of one of them, must get training for democracy through training in democracy—they must have experience in the school of combined action, joint production, law-making, and graded activities. Again, the school as a miniature self-governing State is the theme of an article, "Morals by Rote?" in the *School Review* (xxvii, 6). Is such a use of the school to be contemned? In England we have put fiery torches into untrained hands and wonder now that the bearers threaten a wide conflagration. To a calm observer the shortage of discipline for democracy is as obvious as the shortage of coals.

Commercial rivalry between the United States and Britain will not affect their spiritual unity, to say aught impairing which were a sin against mankind. For the friendly competition, education to commerce is receiving fresh attention in America. Public commercial education was formerly offered at the close of the high school course (planned for the fifteenth to the completed eighteenth year of life), and, as few stayed to the end, the private commercial school waxed fat. It is now being placed at the beginning of the course, and adapted, stage by stage, to the maturity of the pupil. Salesmanship, the art of the shopkeeper, so despised in England, is to be promoted in the United States, as it is hoped, through "a new department of business education, with specially qualified teachers and with methods of procedure specifically adapted to secure the ends sought" (Bulletin No. 18, 1919, of the Bureau of Education). In older American books of arithmetic the metric system was treated

* Gloucestershire Report. P.N.E.U. Office, 26 Victoria Street, S.W.

as an exotic curiosity. To-day such organizations as the World Trade Club of San Francisco are making propaganda for its general adoption, so that international trafficking may be facilitated, and commerce brought into line with science. Even art education is affected by the general impulse, for in the coming contest America, for her industries, will need highly skilled designers, and she is resolved to train them for herself. With commerce as commerce this journal is not concerned; we approve well-considered measures of education to further it and—to ennoble it.

The Towner Bill (now before Congress), to create a Federal Department of Education, provides for a Secretary of Education, appointed by the President and ranking with the heads of other executive departments, and for an Assistant Secretary of Education. And the salaries? For the Minister, 12,000 dollars a year, and for his subordinate 5,000 dollars. "Not lavish," you say; but what State is lavish towards education?

"The University Register, 1918-1919," of Johns Hopkins University, indicates that the famous Baltimore academy is continuing, under President Goodnow, the prosperous activity that it developed under Presidents Gilman and Remsen. The assets of the University exceed 11,000,000 dols.; yet—for the principle of State aid to education is being extended in America—the Legislature of Maryland has granted to it for 1919 and 1920 an annual appropriation of 70,000 dols. In the wide field of instruction, we observe with interest that encouragement is given by Johns Hopkins to commercial studies, and 228 students, men and women, are following evening courses in business economics. The power to read technical German and French is held to be desirable in the case of the embryo chemist; it must be possessed by candidates for the degree of Doctor of Philosophy. Although the War caused a desertion of German for Spanish ("the jobless teachers of German became teachers of Spanish almost overnight," says Bulletin 48, 1918), scientific America, for all the German sins, will not ignore the language of Bunsen and Helmholtz. Prodigious of mental food, the University authorities do not neglect the bodies of their students. The Department of Physical Training has been placed in charge of a Doctor of Medicine as director. It is obligatory on every commencing undergraduate to present himself before the director of this department and undergo a careful physical and medical examination. Unless otherwise advised or incapacitated for any reason, he must take the physical training course during his first two years; for the high brow is not to be accompanied by the bent back.

In the field of classics Johns Hopkins lays stress on archæology and art—subjects in which German teachers were wont to excel English. The University maintains the *American Journal of Philology*. In the current number (XL, 2) Hon. Prof. Gildersleeve rightly upholds Greek accents (of which George Long, he says, was a sworn foe), and chides us for negligence in the use of them:—"Practical observance of the rules of Greek accentuation is still a stumbling-block in England, and the accuracy of English classical texts is due in large measure to the slaves of the Press. Grote's works are disfigured by false accents. Liddell and Scott's standard lexicon is by no means free from slips. That *canis grammaticus* Rutherford ignored the rule for the accentuation of the perfect infinitive active; and only a few years ago, in an eloquent plea for the study of Greek, an eminent historian, in quoting one of Sappho's 'jewels five words long,' managed (he or his printer) to get in five mistakes—accentual and other." We remark incidentally that some modern newspapers are as contemptuous of French accents as ever Lessing and the Eighteenth Century, also reproved by Prof. Gildersleeve, were of Greek. The foremost article in the American journal, on "The Centenary of 'Don Juan,'" contains much interesting critical and bibliographical matter about Byron's erratic poem and the continuations of it attempted mostly by servile imitators with no touch of genius.

FRANCE.

During the summer Internationalism has been the dominant note in University life. The new "relations franco-tchéco-slovaques" had to be cemented, and in May France sent delegates to the festival of the University of Prague. Students from Madrid came to Paris for a "Semaine Espagnole." At Paris, too, were welcomed representatives of our own Universities and of the Swiss; even Chinese students sought curiously the home of victory—the victory of which Victor Hugo was the prophet, as France justly acknowledged on the hundred and seventeenth anniversary of his birth. Internally the most important event in connexion with higher

education has been the nomination of a strong Commission extra-parlementaire, with M. Léon Bourgeois as President, to study projects relating to higher education and the financial support to be allotted to them. French opinion, in Senate and University, is almost unanimous for the defence of liberal culture in higher education: the French student must get at the University not only the knowledge that will enable him to practise his chosen profession with success and honour, but also the sense that that knowledge is but the fragment of a whole, and that above it there are large, general ideas to which he must rise by his own free effort. Yet the practical applications of science to life will not be neglected. Significant are the proposals to add representatives of agriculture and industry to University Boards and to create a National Council for Scientific Research; whilst at Caen an *Institut Commercial* has been attached to the Faculty of Law. In general, a fine spirit of exaltation pervades intellectual France.

No country can afford to do without continuation. It is stated (*L'Ecole et la Vie*, II, 44) that the Viviani Bill for the Education of the Adolescent is now to be revived. The Bill has been recast by the Ministry of Public Instruction upon the report of M. Dessoye, and reduced to simple and practicable clauses. Physical training will be compulsory for all the adolescent. Our readers may remember that under the Bill, as we outlined it, attendance of the continuation school was to be registered in a *livret scolaire*. M. Lafferre, the Minister of Public Instruction, is desirous of making the *livret scolaire* a record of the health as well as of the attendance of its holder. Improved attendance of the ordinary school would be a fit prelude to the introduction of the obligatory continuation school in France.

France, like the rest of Europe, is passing through a moral crisis. The increase of juvenile delinquency awakens widespread anxiety. In 1849 and 1850 the average number of offenders from sixteen to twenty years old brought before the courts was 8,000; in 1905 the tale reached 34,000, of whom 54 were charged with murder. To-day young criminals have grown still more numerous, their acts more barbarous, and often of refined cruelty. The suicide of the adolescent shows a distressing augmentation: from 1871 to 1875 the average number of cases a year for those under sixteen was 25; now the average is 120, and for those from sixteen to twenty it has risen in the same period from 168 to 781. The cause of it all, cry the Catholics, is the School without God. We shall recover ethical equilibrium, says M. Painlevé, independently of any positive, organized religion, by inspiring in the child soul a sense of human duty, and cultivating moral health as carefully as physical.

The Americans think (Bulletin No. 48, 1918, of the Bureau of Education) that our committee to inquire into the position of modern languages in the educational system of Great Britain, who ranked languages according to their importance, French, German, Italian, Russian, and Spanish, placed Spanish too low—at least, for American conditions, colonial and South American. In France, there has been a "slump" in Russian. For commerce or for culture, the French are out in quest of Spanish. There has just been established a Chair of Spanish at the Sorbonne; Chairs of Spanish are to be created also at Toulouse and at Bordeaux; whilst the *Instituts français* at Madrid and other towns of Spain will be developed and, if possible, a French *lycée* opened in the Spanish capital. The teachers in *institut* and *lycée* will promote at once the export of French and the import of Spanish.

An Anglo-American *entente* does not exclude an Anglo-French *entente*. But Britain and America, having the same literature, possess in it a spiritual bond which does not exist between France and Britain. Cross currents of literary influence there have been, but on this side and on that a lack of just appreciation. Voltaire's disparagement of Shakespeare is too trite to be quoted; of Voltaire, in his turn, Carlyle declared: "Of what we should strictly call poetry, he had almost no view whatever." And of these new "national poets," Paul Fort, Henri de Régnier, Jean Richepin, Joachim Gasquet, Francis Jammes, Mme de Noailles, and Paul Claudel, whose rank and order have recently been determined by a vote of French *littérateurs*, how many Englishmen, expert in French, could gauge the merits finely? The Latin genius is not as the Anglo-Saxon genius. And a writer of Latin race embodies his imaginations in words to delight his own people, not for the hypothetical glory of being "discovered" by America or Britain. National tastes differ. A League of Nations may group interests and ideas. "Elle n'arrivera pas à créer un goût universel et hybride, et fort heureusement le génie des peuples gardera son indépendance" (*L'Ecole et la Vie*, II, 36). In brief, literature is *national*. But science is *international*. America is inviting the nations to co-

operation in scientific research. Are they visionaries who see in such co-operation a means that will unite the participators firmly, as they share hopes and endeavours, communicate results, and rejoice over their several or joint contributions to the welfare of mankind? State aid for research may yield other as well as material fruits.

INDIA.

When we wrote lately of the need for more universities in India we had in mind not the multiplication of universities of the old type, but increased provision—indisputably necessary—for higher technical and commercial education. But it is stated (*Educational Review*, Madras, xxv, 3) that of 58,905 teachers in the secondary schools of India only 7,627 possess a university degree. Is not the fact indicative of a wider need? As to university subjects, the Madras Teachers' Guild, urging the educational value of geography, has asked the University of Madras to institute a Diploma of Geography and to give secondary teachers special facilities to prepare themselves for it. At Calcutta there was opened on July 15 a new class for the degree of M.A. in the vernaculars, which have not hitherto found a place in the curriculum for that degree; and instruction will be offered in the twelve vernaculars—Bengali, Hindi, Guzerati, Oriya, Assamese, Marathi, Canarese, Malayalam, Tamil, Telugu, Maithili, and Urdu. At matriculation examinations the number of the rejected continues to be large; thus, the Report of the United Provinces of Agra and Oudh for 1917-18 shows only 1,066 passing out of 5,126 candidates. A writer in the *Educational Review* (xxv, 4) suggests that the age for matriculation in India should be raised. We take the opportunity to point out that the English Education Act, exempting from the obligation to attend a continuation school all young persons of sixteen who have matriculated, may cause a rush of candidates for matriculation. Both in India and in England it might be well to consider anew the age for matriculation and to study the possibility of prescribing a clear, fixed, uniform standard of attainment.

NEW SOUTH WALES.

It is a sign of vigour that, when in the spring an epidemic made it necessary to keep the schools of Sydney closed for a while, the Director of Education issued admirable "Home Instruction Leaflets" to tide over the difficulty and prevent a waste of time. The Inspectors' Reports published in the official *Education Gazette* are frank and useful. One inspector emphasizes the importance of humanizing discipline; for "where discipline is external, the child is not being prepared for life in a free community, in which right conduct is, for the most part, a matter of self-choice." Training by observation continues to receive attention; but it is sometimes imperfect, as when rainfall is recorded without being brought into relation to the prevailing winds. At Longueville the inspector found it "refreshing" to see a boy of ten years stand before his class and deliver—in his own slow-coming, childish words—a little lecture on the crayfish that he had caught. Another Report tells of good work done in connexion with the local wild flowers. Again, many children in New South Wales are members of the Gould League of Bird Lovers; these are being invited to contribute to a memorial to Mrs. Mollie McNutt, whose "Songs of Bushland" and Nature-study stories have endeared her much to young Australians. We delight always to publish abroad the achievement of these obscure educators in the British Empire.

UNIVERSITIES AND SCHOOLS.

OXFORD.

University orations are usually learned, not to say abstruse; but they are not as a rule interesting reading. The Creweian Oration delivered by Sir Herbert Warren at the Encaenia, Oxford, this year is, for once, an exception. In the original, a scholar will find very genuine pleasure. Even in the translation there is such an abundance of wit, not to mention a still greater abundance of puns, that a copy is well worth the getting. References to the "Contemptibles," "U-boats," Tirpitz, the river Kishon, "W.A.A.C.'s" and "W.R.N.S.'s," "Zepps," and "Fathers of their Country" (Joffre and Haig) jostle each other in most diverting fashion. The sea of "Helle" as a "Hell" of ships and men, and the paragraph on "Pax, Tax, atque super Tax" are

surely worth the modest twopence charged by the Oxford Chronicle Company, who publish for that modest sum both the original Latin and the English translation.

WALES.

The Committee which is inquiring into the organization of secondary education will hold conferences in four centres in Wales, at Aberystwyth, Bangor, Cardiff, and Swansea—that is, at the seats of the University colleges—and each conference will probably be of two days' duration. The bulk of the evidence will, however, be taken in London, and it is understood that every effort will be made to expedite the proceedings in order that the report may be issued before the close of the year. Contrary to general expectation the meetings of the Committee will be private, but official summaries of the proceedings will be issued from time to time.

The Welsh Department of the Board of Education are about to initiate an interesting educational experiment which should receive the whole-hearted support of teachers throughout the Principality. The idea is to attempt the formation of a kind of Welsh Domesday Book, the material for which can be collected through the teachers and pupils who, between them, have access to a large amount of local lore which, through neglect, is in danger of becoming lost. The Honourable Society of Cymmrodorion and some private individuals have placed at the disposal of the Board the funds necessary for the purpose. Schools and colleges are invited to make a collection of Welsh field and place names, &c., in a given area and to mark on a quarter sheet of the six-inch Ordnance Survey map the spots to which the names are attached. The requisite material will be provided so that no expense will fall on any school or college or individual taking part in the experiments. Besides schools and colleges, all institutions interested in education—such as the Central Welsh Board, the National Library, the National Museum, and the Cambrian Archaeological Society—are asked to assist in making the collection, and when it is completed the whole of the material will be deposited in the National Library, where it will be available for students. The scheme is intended to correct the bookish character of much of the present day teaching, especially in history and geography, which are too often written without any reference to local conditions, and therefore suffer in interest and

are destitute of vitality. We therefore trust that the Welsh Department will receive the cordial support of all teachers and scholars who are in any way qualified to contribute towards the collection. Material for it should not be wanting, as Wales is particularly rich in local historical associations and interesting place-names.

Sir Henry Jones, of Glasgow University, in a special conference on education which he had summoned informally, outlined an interesting scheme for bringing University culture into closer touch with the democracy. His idea is to utilize the Churches and their organizations as links between the University and the people, and he appealed for their co-operation. The great social forces that were uplifting the community were no longer led by the Churches as in the past, but he thought that if they were to recognize their responsibilities more fully they could in a large measure restore their influence and so help to solve some of the dreadfully difficult problems of the present day. He appealed to them, therefore, to broaden their outlook, as it was well within their powers to extend their activities into the domain of education without any detriment to their more spiritual work. Why, for instance, should not every small town provide a three years' course in the humanities or in scientific subjects? The classes would be tutorial in character and the University would presumably supply the lecturers. There was no discussion at the conference, and therefore it is, at this stage, difficult to know how Sir Henry means to apply his scheme in practice. Granted that it is possible to gather together a sufficiently large number of persons willing to attend a three years' course, there still remains the very serious difficulty of providing suitable lecturers. The local minister or clergyman is but rarely qualified for the work, through inexperience and lack of training, and, therefore, unless the University is able to come to its rescue, the scheme will most probably collapse as soon as the first enthusiasm has passed away.

Another interesting contribution to the great mass of educational literature that is so freely distributed in Wales at present came from Prof. W. J. Gruffydd, of Cardiff College. Speaking at the Cymmrodorion Society he urged that the Eisteddfod and the University should be linked together to save what could be saved of the old culture of Wales. Apparently he would form a kind of

(Continued on page 602.)

NOVELLO'S VOCAL MUSIC FOR SCHOOLS AND COLLEGES.

FOLK-SONGS.—The cult of the Folk-song is now recommended by educational authorities, and is general in all classes of Schools. In this department Messrs. Novello have had the co-operation of Mr. CECIL SHARP, who is admittedly an outstanding authority in this branch of musical investigation and study. The series is published in single numbers at 2d., and in books, containing nine or more numbers, at 1s.

MODERN SONGS AND PART-MUSIC.—Amongst the eminent modern British composers who have contributed to the series are Sir Alexander Mackenzie, Sir Hubert Parry, Sir Edward Elgar, Sir Charles Stanford, Sir Frederick Bridge, Sir Frederic Cowen, Edward German, Granville Bantock, Dr. H. Walford Davies, Dr. Arthur Somerville, Dr. Vaughan Williams, Dr. George Bennett, Dr. Eaton Fanning, Frederick Corder, Myles B. Foster, Thomas Dunhill, G. T. Holst, John Ireland, Joseph Holbrooke, George Rathbone, Rutland Boughton, Percy Fletcher, B. Luard-Selby, Oliver King, and Colin Taylor; and past generations are represented by Sterndale Bennett, Smart, Stainer, Barnby, Macfarren, Gaul, Battison Haynes, R. H. Macdonald, Bishop, Dr. Arne, Thomas Morley, and Henry Purcell. Published in single numbers, usually at prices ranging from 1½d. to 6d.; also in cheap books, each containing generally eight or nine songs of about the same degree of difficulty.

CANTATAS, OPERETTAS, &C.—Sir Frederick Bridge, Sir Frederic Cowen, Dr. Arthur Somervell, J. D. Roeckel, Dr. Herbert Wareing, Dr. H. Walford Davies, Dr. Eaton Fanning, Percy Fletcher, G. T. Holst, Dr. Dunstan, George Rathbone, and B. Luard-Selby have made notable contributions to this section of the school series.

CLASSICAL SONGS.—In Novello's Catalogue there are numerous specimens. Three volumes of CLASSICAL SONGS, each containing between thirty and forty songs by Handel, Bach, Haydn, Mozart, Beethoven, Schumann, Cornelius, Mendelssohn, Brahms, and others, are published (with the accompaniments as written by the composers) at TWO SHILLINGS AND THREEPENCE per volume. These songs are also issued separately at prices ranging from 1½d. to 4d., and in cheap Books, each containing five or six songs.

Selections of Music will be sent on approval, and NOVELLO'S Classified School Catalogue will be forwarded on application.

"These are admirable little textbooks and are admirably suited for schools."—*Scottish Educational News*.

HOBBS' ARITHMETIC OF ELECTRICAL MEASUREMENTS.

Revised by A. RISDON PALMER, B.Sc., B.A.

Crown 8vo, with Diagrams. 2s. net.

Brief explanation; supplementary to the teacher's work; provides numerous well-selected examples for the student to work.

MAGNETIC MEASUREMENTS AND EXPERIMENTS.

A. RISDON PALMER, B.Sc., B.A., Head of the Matriculation Dept., The Polytechnic, W.

Crown 8vo, 128 pp. 26 Diagrams. With answers. 2s. net.

Each chapter contains a set of experiments, arranged to reduce a duplication of apparatus as far as possible (for graphical questions), a short account of the theory to supplement the class lesson, some fully worked examples, and a set of carefully graduated exercises for the student to work. The subjects treated are (e.g.) Pole Strength, Coulomb's Law, The Tangent Position of Gauss, Comparison of Magnetic Moments, Time of Vibration of a Magnet and the Declination and Dip.

"This splendid little book."—*Electricity*.

ELECTRICAL EXPERIMENTS.

By the same Author.

Crown 8vo, many Diagrams. 2s. net.

A course in Experimental Electricity for one or two years. Details are given as to Apparatus and the method of procedure, and the setting out of results. Questions are frequently asked to see that the meaning of the experiments has been grasped. The book covers such ground as a simple lamp circuit, arrangement of cells, series and parallel circuits, Ohm's Law, Silver plating, Accumulator making, the Magnetic and Heating effect of a Current, Induction, Bells, Telephones, Telegraphs, Series Motors, the Wheatstone Bridge, P.O. Box, and Potentiometer.

"The treatment is very practical."—*Electricity*.

STEREOSCOPIC VIEWS.

To illustrate the Physical and Historical Geography of Palestine.

A knowledge of the land is essential to a true knowledge of the book.

Messrs. Underwood have prepared three sets of their excellent stereoscopic views of Palestine and the East specially adapted to educational purposes.

(1) THE PHYSICAL FEATURES OF THE LAND. (II SAMUEL)
(2) THE SCENES OF THE MINISTRY OF JESUS. (THE GOSPELS.)
(3) THE CITIES OF ST. PAUL. (THE ACTS.)

THOMAS MURBY & CO.,

1 FLEET LANE, LUDGATE CIRCUS, LONDON, E.C.4.

National Academy higher in authority than either, though he did not make it quite clear what its functions were to be, nor how it was possible to combine such an institution as the Eisteddfod with the University. The former, which is an interesting social function where musical competitions are the predominant features, has in reality but little in common with the University, and it is doubtful whether much would be gained by associating it with any other institution. Generally speaking, most of the addresses on education at the Corwen Eisteddfod were marred by too many sneers at our present educational system. The national note was sounded far too loudly, and in too many instances the speakers simply indulged in meaningless generalities about "Welsh ideals" and displayed a lack of sympathy with the work of the schools, with the result that their speeches lacked helpful criticism and guidance.

Mr. John M. Judd, Head Master of West Suffolk County School, has been appointed Head Master of Penarth County School, in succession to Mr. Griffith Jones, who has retired.

We regret to learn that Mr. H. R. Olley, Head Master of Llangollen County School, has died after a long illness. Mr. Olley was appointed Head

Master in September 1894, and therefore was

one of the early appointments under the Welsh Intermediate Act. He had graduated as a Wrangler, and had a highly successful career at Llangollen.

Miss M. E. Price, Head Mistress of Llandovery Dual School, has also passed away. Miss Price was in the unique position in Wales of occupying the headship of a dual school.

SCOTLAND.

Captain John D. Craig, R.F.A., has been appointed to the Chair of Latin at Queen's University, Kingston, Canada. Prof. Craig was a distinguished student of Classics at St. Andrews and Oxford.

He was afterwards Assistant in Classics at St. Andrews and later at Kingston. At Oxford he distinguished himself in athletics, and he volunteered for active service on the outbreak of the war.

The University Court have made appointments to five new Chairs, as follows:—To the Gardiner Chair of Bacteriology, Dr. C. H. Browning, Professor of Bacteriology in the University of London

and Director of the Bland-Sutton Institute of Pathology at the Middlesex Hospital; to the Gardiner Chair of Physiological Chemistry, Dr. Edward P. Cathcart, Professor of Physiology, London Hospital Medical School; to the Gardiner Chair of Organic Chemistry, Dr. Thomas S. Patterson, Waltonian Lecturer and Lecturer in Organic Chemistry, University of Glasgow; to the Marshall Chair of Modern Languages (French, &c.), Mr. Charles A. Martin, Lecturer in French, University of Glasgow; and to the William Jacks Chair of Modern Languages (German, &c.), Dr. Herbert Smith, Lecturer in German, University of Glasgow.

The University Court have appointed Mr. Alexander Findlay, Professor of Chemistry at the University College of Wales, Aberystwyth, to the Chair of Chemistry, in succession to Prof. Soddy, now

Aberdeen.

of Oxford. The Court have also appointed Mr. A. Mackenzie Stuart to the Chair of Law, in succession to Prof. Irvine. The Court have made the following appointments to Lectureships:—Conveyancing—Mr. A. C. Morrison; Accountancy and Business Methods—Mr. Henry A. Davidson, Solicitor and Chartered Accountant; Banking—Mr. R. H. Cowie, Royal Bank of Scotland, Aberdeen; Education—Miss Bairstow; Geography—Mr. John McFarlane, Reader in Geography, University of Manchester; Economic History—Mr. Arthur Birnie, George Watson's College, Edinburgh. Mr. Donaldson R. Thom has intimated his intention of retiring from the Secretaryship of the University, after about twenty-seven years' service.

The death is announced of Emeritus Prof. W. S. Greenfield, who occupied the Chair of Pathology in the University from 1881 to 1913. He was a graduate of London University and made many important investigations in his subject. The University Court have made the following appointments to Chairs:—Logic and Metaphysics—Prof. Norman Kemp Smith, formerly Professor of Philosophy at Princeton University, U.S.A.; Therapeutics—Dr. Meakins, McGill University, Montreal; Moncrieff-Arnott Chair of Clinical Medicine—Dr. Francis D. Boyd. Mr. T. P. Laird, Secretary of the Society of Accountants, has been appointed Lecturer in Accounting and Business Method, to become Professor when the Ordinance for the Chair in that subject has been approved. Mr. William Wilson has been appointed Secretary of the University, in succession to Sir Ludovic Grant, Bart, resigned.

Edinburgh.

(Continued on page 604.)

DRUMMOND LATHES

Are right at the Front.
The important part played by Lathes in the present war cannot be exaggerated. A knowledge of Lathe Work means that at all times you are "Right There" and your services indispensable. DRUMMOND LATHES stand for the "HALL MARK" of Accuracy, and in the education of all a good knowledge of Lathes and their uses is invaluable. The 3½ in. Lathe illustrated below is low in price, but capable of the highest class work.

As supplied by the British Admiralty.

HARRAP'S NEW AND STANDARD TEXT-BOOKS.

HARRAP'S INTRODUCTORY ALGEBRA.

By WILLIAM FARQUHARSON, M.A., Daniel Stewart's College, Edinburgh. Crown 8vo. 180 pages. With Answers, 2s. net. Also without Answers, 1s. 9d. net.

From the *Principal of a Preparatory School*:—"Farquharson's *Algebra* is first-rate, and I shall put an order through in due course. I hope the book will have the success it deserves, for, of the large number of elementary *Algebras* I have perused in my search for something suitable for beginners, this is the only one that appears to have realized and provided for the extraordinary difficulty of the subject for small boys."

ENGLISH EXTRACTS AND EXERCISES.

For Comparative Study and Training in Composition. By F. H. PRITCHARD, Lecturer in Literature at the Municipal Technical School, Devonport. Large Crown 8vo. 256 pages. 2s. 6d. net. (*Prospectus on application.*)

An admirable practice-book in English for lower and middle forms in secondary schools and for upper classes in primary schools. The main idea is to centre all the week's work in English round a suitable extract. The exercises are abundant and in many cases novel in character. No essential point in elementary English is left untouched, and wherever possible opportunity is taken to stimulate interest in the author or extract under consideration.

STUDIES IN LITERATURE.

By F. H. PRITCHARD, Author of *English Extracts and Exercises*. 208 pages. Crown 8vo. 2s. 6d. net.

This volume follows the author's previous work, and provides a more advanced and detailed course.

A SCHOOL GRAMMAR OF PRESENT-DAY FRENCH.

By J. E. MANSION. Crown 8vo. 256 pages. 3s. 6d. net.

A new French Grammar for middle and senior forms, special features of which are the stress laid on fundamental principles, and careful differentiation between the normal constructions of the language and those which belong to emotional, colloquial, or literary expression.

THE BEGINNER'S FRENCH READER. [Ready shortly.]

With Music, Exercises, and Complete Vocabulary by PETER J. SCHERER. Illustrated. Crown 8vo. 160 pages, limp. 1s. 9d. net.

PRACTICAL LATIN COURSE FOR BEGINNERS.

By F. P. MOULTON. 3s. 6d. net. Designed to lead in one year to the reading of Caesar and Ovid.

COMMERCIAL SPANISH.

[Ready shortly.]

By Prof C. F. McHALE. With Illustrations, Maps in Colour, Complete Vocabulary, and Full Index. Crown 8vo. 332 pages. 5s. net.

A unique textbook for learning through the medium of Spanish not only that language itself, but also many important facts about commercial procedure in countries in which Spanish is spoken.

ENGLISH GRAMMAR AND COMPOSITION.

A PRACTICAL COURSE IN INTERMEDIATE ENGLISH.

By EDWARD ALBERT, M.A., George Watson's College, Edinburgh. Second Edition. Crown 8vo. 272 pages. 3s. net.

This course is designed as an introduction to *A Practical Course in Secondary English*, of which Mr. Albert was joint Author.

A PRACTICAL COURSE IN SECONDARY ENGLISH.

By GEORGE OGILVIE, M.A., Broughton Junior Student Centre, and EDWARD ALBERT, M.A., George Watson's College, Edinburgh. With Complete Index. Crown 8vo. 500 pages. 5s. net.

Also in Three Parts:

- Part I. Style. 184 pages. Limp. 2s. 3d. net.
- Part II. Form. 176 pages. Limp. 2s. 3d. net.
- Part III. History of the English Language. 160 pages. Limp. 2s. 3d. net.

Also Parts I and II in one volume. 350 pages. 4s. net.

"The book has a distinct value; the exercises are abundant and well chosen, the section on the history of the language is very good indeed, and grammar is treated as the living tutor of expression."—*The School World*.

PRACTICAL ENGLISH COMPOSITION.

By C. M. GERRISH, B.A., and M. CUNNINGHAM. Adapted and edited for English Schools by E. W. EDMUNDS, M.A., Luton Modern School. Large crown 8vo. 320 pages. 4s. net. Also Section I. 112 pages. 2s. net. Sections II and III. 224 pages. 3s. net.

This book is on new lines. The freshness and interest of the material, the clearness and detail of its analysis, the excellent practice work and lists for reading which it contains will all help to make it such a book as English teachers have long been looking for. *Prospectus free on application.*

GEORGE G. HARRAP & CO., LTD.

Directors: George G. Harrap and G. Oliver Anderson.

2 and 3 PORTSMOUTH STREET, KINGSWAY, W.C. 2.

Miss Mary Burns, Doctor of the University of Paris and an Honours Graduate of Edinburgh, has been appointed Lecturer in French.

The Report for 1918-19, the last of a series dealing with the old regime, shows that the tendency to irregular attendance of pupils has not been appreciably checked. The measures taken to maintain the teaching staffs have been satisfactory, and the

Education Department's Report.

proportion of teachers employed without some technical qualification has been surprisingly small. The pressure has been considerably relieved by the steady demobilization of teachers. For the purpose of increasing teachers' salaries, a sum of £463,147 was distributed for the period from April 1, 1918, to May 15, 1919. The general effect of the grant has been to raise the average salary from £112 in 1916 to £134. Figures are given showing the decrease in the number of students in training to be teachers. In 1913-14 the numbers were 508 men and 2,062 women; and in 1918-19 there were 38 men and 1,884 women, the total decrease being 648. An increase in the numbers is expected next year. The proportion of teachers to scholars is now one certificated teacher to every thirty-four children in average attendance. The number of certificated teachers, including those on war service, in 1917-18 was 21,807 (5,063 men, 16,744 women); of provisionally certificated and assistant teachers 311 (16 men, 295 women) and of pupil teachers 2 men and 4 women.

The Scottish Education Department, after consultation with representatives of the Education Authorities and of the teaching profession, have prepared a set of minimum national scales of salaries for

Teachers' Salaries.

teachers. The amounts to be paid to any teacher are to be independent of any payment made to him or her out of any bequest or endowment the object of which is to secure special emoluments to any class of teachers or to the teachers of any special locality. The scales of salary are arranged in three main sections:— (1) Basic scales for all recognized teachers—men, £150, rising by £10 to £250; women, £130 rising by £5 to £150 and by £10 to £200. (2) Modifications of basic scales for various classes of teachers, e.g. certificated teachers with three years' training; the same with four years' training; the same if graduates; teachers of higher subjects in intermediate or secondary departments. The salaries of these classes of teachers range from a scale of £160 to

£280 to a scale of £250 to £400 for men, and from a scale of £140 to £210 to a scale of £200 to £350 for women. (3) Annual payments in respect of special responsibilities to be made in addition to salary on scales (1) and (2) to head teachers in primary schools, according to the number of teachers in their schools, £10 to £300; first assistants or second masters in large schools and nominated senior women assistants in large mixed schools under a head master—education authorities to submit proposals for the approval of the Department; infant mistresses in schools with not less than six teachers, £18 to £102 according to the number of teachers; in intermediate and secondary schools head teachers and principal teachers of higher subjects, who supervise the work of other whole-time teachers in these subjects—no definite scale, but individual education authorities to submit proposals for the approval of the Department. Where a teacher's house is provided, modification may be made to an extent not exceeding the assessed value of the house. Only service in the Scottish schools is to be taken into account; but cases in which a teacher has served for a long period outside Scotland may be taken into account. Service with H.M. Forces given by recognized teachers subsequently to the date of their recognition shall count as equivalent to service in Scottish schools.

The Glasgow Authority have resolved to grant free books and stationery to all pupils attending the schools administered by the Authority, except the high schools. The Director of Education has estimated the cost at £64,298 if the resolution is applied to pupils up to fourteen years of age. If the school age is raised to fifteen, the estimated extra cost will be £18,000. In Edinburgh free books and stationery have been supplied since 1882.

The Perthshire Authority have appointed Mr. John M. Dawson, Rector of Bell-Baxter School, Cupar, Fife, to be Director of Education at a salary of £800 rising to £1,000.

IRELAND.

The Rules and Programme of the Intermediate Board for the new school year commencing this September have not yet been published. This is a cause of serious inconvenience to the schools. The Assistant Commissioners have issued a memorandum.

BACON'S "NEW ATLANTIS." With an Introduction

and Notes by D. W. BEVAN. Crown 8vo, 68 pages. Price 1s. net.

JUST PUBLISHED.

The Ancient Civilisations Series. By EMILY M. BURKE, L.L.A., Senior Mistress, Hornsey County School.

Book II.—THE VIOLET CROWN AND THE SEVEN HILLS. Cr. 8vo, cloth, 177 pages. With 11 Maps. Price 3s.

This second volume of the series traces the course of empire westward and presents the civilisations of GREECE and ROME in a style which will certainly arouse the keen interest of pupils from twelve to fourteen years of age. It will give them also clear and adequate impressions of the lasting contributions of these two Powers to that experience of the Ages which is the inheritance of modern states.

Although pupils who have read "THE SHINING EAST" (Book I) will feel a deeper interest in this book, it is nevertheless quite complete in itself.

For full particulars of Heaton's Geographies, Potter's Concurrent, Practical and Theoretical Geometry, and Students' Shakespearean Texts, &c., see our Catalogue, post free on application to

MR. HERBERT RUSSELL, 35 & 36 TEMPLE CHAMBERS, LONDON, E.C. 4.

MILLS & BOON'S NEW BOOKS.

MILLS & BOON will be happy to receive applications for Specimens from Heads of Schools and Teachers of special subjects. New Educational Catalogues sent post free.

ENGLISH GRAMMAR, WITH ANALYSIS AND PARSING.

By H. G. SMITH, B.A., Senior English Master, King Edward's School, Camp Hill, Birmingham; and G. H. BALL, M.A., Head Master, King Edward's School, Camp Hill. 2s. net.

ENGLISH COMPOSITION, INCLUDING PRÉCIS AND PARAPHRASE.

By H. G. SMITH, B.A., and G. H. BALL, M.A. 1s. 6d. net.

These books have been written with a view to providing a course in English Grammar and Composition suitable for use in secondary schools. They aim at explaining the fundamental rules of the language and making clear the difficulties which teachers of Latin and French experience in imparting a knowledge of their subjects to young boys.

The above two books are issued in one volume entitled "English Grammar and Composition," and form a three years' course in English. 3s. net.

POETRY FOR BOYS.

By STANLEY MAXWELL, M.A. 1s. 6d. net.

A collection of poems of established literary merit printed in bold type.

A NEW SCHOOL GEOMETRY.

Containing more than 1,700 carefully graduated exercises. By RUPERT DEAKIN, M.A. Crown 8vo. 2s. 6d. net. Also in two parts without Answers. Part I: The Properties of Lines, Triangles, and Quadrilaterals. 1s. net. Part II: Areas and their Algebraical Illustrations and the Properties of the Circle. 1s. 6d. net.

EXERCISES IN FRENCH FREE COMPOSITION FOR UPPER CLASSES.

By R. R. N. BARON, M.A., French Master, Cheltenham Grammar School. 185 Exercises. Sixth Edition. 1s. 6d. net.

A REFORM FIRST FRENCH BOOK.

Especially written for the use of Adult Students. By J. STUART WALTERS, D. ès L. Illustrated. 1s. net. Teachers' Edition on writing paper. 2s. net.

NOTES ON THE GOSPEL ACCORDING TO ST. MATTHEW.

With Questions and Concordance for the use of Schools and Young Students.

By the Rev. C. R. GILBERT, M.A. With 3 Maps and a Photograph. Crown 8vo. 1s. net.

DIRECT METHOD FRENCH TEXTS

Edited by R. R. N. BARON, M.A.

TRISTAPATTE ET GORET, Etc. Crown 8vo. 1s. net.

"The five simple stories contained in this book have been taken from the 'Livres roses Larousse.' Each is divided into short sections, and to each section there is an 'Exercice,' consisting of a set of French questions on the text, questions on grammar and vocabulary, and a subject for free composition."—*School World*.

PIERRILLE. By JULES CLARETIE. Crown 8vo. Second Edition. 1s. 6d. net.

"Well edited, with brief but adequate notes in French."—*The Journal of Education*.

TAMANGO and JOSÉ MARIA LE BRIGAND. By PROSPER MÉRIMÉE. Crown 8vo. Second Edition. 1s. net.

TAMANGO is also issued separately in limp cloth, at 4d. net. "A dramatic but fascinating story, well printed, with excellent exercises, notes in French, and a short account of the author."—*The A.M.A.*

LA BELLE NIVERNAISE. By ALPHONSE DAUDET. Crown 8vo. Fourth Edition. 1s. 6d. net.

"The editor has done his work well. The exercises are carefully arranged."—*The A.M.A.*

BUG JARGAL. By VICTOR HUGO. Crown 8vo. 2s. net.

"The exercises are particularly good, and include a sufficient amount of word-formation."—*Modern Language Teaching*.

CARTE DE GRAMMAIRE. By Miss L. E. THEEDAM, The Godolphin and Latymer School, Hammersmith. 6d. net.

A concise résumé of French accidence, written in French and intended to be used in connexion with Reform French Textbooks and readers, by pupils of Junior and Middle School forms.

AN INTRODUCTION TO HEAT.

By ARTHUR R. LAWS, B.Sc., and GEORGE W. TODD, B.A., D.Sc., Science Masters at the Royal Grammar School, Newcastle-on-Tyne. With 106 diagrams. 2s. 6d. net.

The main idea underlying it is that boys are gifted with a large amount of curiosity, and that, when they once realize that there is something behind many of the phenomena of everyday life, they are prepared to take a good deal of trouble to satisfy their inquisitive instincts.

OUTLINES OF APPLIED PHYSICS.

By H. STANLEY, B.Sc., Lecturer in the Merchant Venturers' Technical College, Bristol. With 75 diagrams. 2s. 6d. net.

EXPERIMENTAL MECHANICS AND PHYSICS.

MILLS & BOON, LTD., 49 RUPERT STREET, LONDON, W.1.

andum explaining that the Rules and Programme are not published by the Board but by the Government, and that they were forwarded to the Government for presentation to Parliament on March 14. The Government should have issued them after they had lain on the table of the Houses of Parliament for forty days, and had this been done they would have been in the hands of the public in May. An excuse is made of the printing strike in Dublin, but this did not begin until the last week in June. As a matter of fact, the Rules for 1920 are the same as for the present year, and the set books in the programme are, in nearly all cases, identical with those set in 1917.

Will this Programme be the last of its kind? Will there be a reform of the present system of intermediate education during the coming year? It is not certain, as the new Education Bill for Ireland has not yet been introduced. The Government

The Government and Irish Education.

have promised it at an early date, and it is understood that it will be brought forward in the autumn session. It is the duty of the Government to see it through. When bakers, policemen, miners, engine-drivers are receiving £4 a week, the claims of teachers put forward in the recent Vice-Regal Commissions become moderate indeed. Will the Government take their courage in their hands and set Irish education on a secure basis, or will they, by adopting half measures, leave everyone dissatisfied? It is a good sign to see not teachers merely but the labouring classes asking for increased facilities for education for workers up to a more advanced age. The Irish Union of Women Workers and the Irish Labour and Trade Union Congress are pressing for shorter hours and day classes for all boys and girls up to the ages of sixteen and eighteen, and it is essential that the opportunities now being opened up in Great Britain should be available in Ireland too.

The Intermediate Education Board have, for the first time, issued a pamphlet of thirty-nine pages containing reports of the Inspectors of the Board on the state of education in their districts.

Inspectors' Reports.

These reports are comments by each inspector on his own subjects in the schools he visits. They do not contain general suggestions for educational reform, but there is a mine of information in them as to the lines on which reform should proceed in various directions. Often criticisms are offered which the inspectors are well aware are at present "windy words." They are unanimous that

large numbers of students enter intermediate schools too late and without adequate foundation. Their parents are anxious for them to pass the Junior Grade, for which they are quite unfit, and their education is practically a failure. Under present conditions there is no remedy for this. Again, some suggestions are offered which schools would no doubt follow if they could, but they are hampered by the present system. Inspectors wish teachers to act as free men when they are really in chains.

GENERAL.

There is little doubt that the committee now set up under the guidance of Mr. Fisher in order to solve the question of salaries in public elementary schools will shortly be followed by a similar committee for the same purpose, but with reference to secondary- and technical-school teachers, probably for all who are engaged in higher education. The *Yorkshire Post* rather unkindly suggests that elementary-school teachers are being considered first because their claims are more clamorously and insistently advocated than are those of the secondary-school teachers. Badly paid as are the latter, the former are in even worse case.

Had the Government taken the matter in hand when the reports of the two Departmental Committees on salaries appeared two results would have followed: widespread and well-justified bitterness would have been avoided and also much real misery; the process of attracting entrants to the profession would have already begun. The figures given in Circular 1,124, just published, as to the shortage of teachers are in themselves a strong condemnation of the policy of procrastination so far as the second of these results is concerned.

Negotiations are in progress for the setting up of a Joint Advisory Council between the Association of Education Committees and the Joint Committee of the four major secondary associations, the Head Mistresses', Head Masters', Assistant Mistresses', and Assistant Masters' Associations. When this Advisory Council comes into being it will be parallel to that just completed between the same Association and the National Union of Teachers, the Joint Committee of the four Associations representing second-

(Continued on page 608.)

Baby Shows and Day Nurseries.

The organizers of the Day Nurseries will profit greatly by the practical experience of the Baby Shows and Infant Welfare Centres. Methods which have been successful and foods which have proved their worth there, will be adopted by the new Nurseries.

At the most carefully judged Baby Shows and the most carefully supervised Centres for Infant Welfare,

ROBINSON'S "Patent" BARLEY

has been tested and has stood the test. Again and again has the First Prize Baby at the Baby Shows proved to have been fed on Robinson's "Patent" Barley.

Many a baby never has a fair start in life—born sickly, ailing and unable to be fed by Nature's method. Yet from these frail, suffering little bundles of mortality Robinson's "Patent" Barley has produced fine sturdy children. That is why in the Day Nurseries this famous food will be adopted and will have yet other opportunities of bringing health and happiness to our little growing citizens.

NEW AND RECENT TEXTBOOKS

MATHEMATICS

ARITHMETIC FOR PREPARATORY SCHOOLS

By TREVOR DENNIS, M.A., Head Master of Lady Manners' School, Bakewell, late Mathematics Master at Sherborne School. Crown 8vo., 4s.; or with Answers, 4s. 6d. Also issued in two parts, bound in limp cloth.

[Bell's Mathematics Series.]

This textbook follows the lines of the syllabus issued by the Curriculum Committee of the Head Masters' Conference. Chapters are included on Graphs, Logarithms, and Household accounts. Decimal Notation is introduced and illustrated by practical work. The examples cover a wide range, and revision papers are included after each set. The types used conform to the standard laid down by the British Association Committee.

ANALYTICAL GEOMETRY OF THE STRAIGHT LINE AND CIRCLE

By JOHN MILNE, M.A., Senior Mathematics Master of the Mackie Academy, Stonehaven. Crown 8vo. 5s.

[Bell's Mathematics Series.]

The examples in this work have been carefully constructed so as to bring into prominence the geometrical properties dealt with. Long lists of questions involving purely manipulative algebra have been avoided as dull and not presenting the subject in its true light.

A FIRST COURSE IN THE CALCULUS

By W. P. MILNE, M.A., D.Sc., Mathematics Master at Clifton College, Bristol, and G. J. B. WESTCOTT, M.A., Head Mathematics Master, Bristol Grammar School. Crown 8vo., with Answers, 3s. 6d.

[Bell's Mathematics Series.]

"Few young men know even the aims and objects of the Science of Mathematics, much less its applications, though they may have studied it for years at school. The reason is that the schoolboy is not pushed fast enough into the heart of the science, which is the Calculus."—Col. Sir Ronald Ross, in his Presidential Address to Science Masters.

STATICS and DYNAMICS, FIRST PARTS.

By R. C. FAWDRY, M.A., B.Sc., sometime Scholar of Corpus Christi College, Cambridge; Head of the Military and Engineering side, Clifton College. Crown 8vo. In one volume, 5s. Also Statics, complete, 5s., or in two parts: 3s.; 2s. 6d. Dynamics, complete, 5s., or in two parts: 3s.; 2s. 6d.

[Bell's Mathematics Series.]

COMMERCIAL ARITHMETIC AND ACCOUNTS

By A. RISDON PALMER, B.A., B.Sc., Head of Matriculation Department, and JAMES STEPHENSON, M.A., M.Com., B.Sc. (Econ.), Head of the Higher Commercial Department, both of The Polytechnic, Regent Street, London.

Part I, Third Edition, 3s. net; with Answers, 3s. 6d. net. Part II, Second Edition, 3s. net; with Answers, 3s. 6d. net. Parts I and II, complete in one volume, 5s. net; with Answers, 6s. net. Part III (in preparation). Answers separately, Part I, 6d. net; Part II, 1s. net; Parts I and II, together, 1s. 6d. net.

[Bell's Mathematics Series.]

"It almost makes one wish one were a modern child, so that one could be educated on such a book."—*Nature*.

Further details of this series will gladly be sent on application.

DIFFERENTIAL CALCULUS FOR COLLEGES AND SECONDARY SCHOOLS

By CHARLES DAVISON, Sc.D., Mathematics Master at King Edward's School, Birmingham. Crown 8vo., with Revision Exercises, Essays and Problem Papers, 6s.

Messrs. Bell also publish standard textbooks on

Arithmetic, Algebra, Geometry and Trigonometry, by Messrs. PENDLEBURY, BAKER and BOURNE, BORCHARDT and PERROTT, &c., particulars of which will be sent on application.

CONTES POUR LES COMMENÇANTS

By Mrs. C. M. NESBITT. With a Preface by MARC CEPPI, Whitgift School, Croydon. Illustrated, with full Vocabulary, 1s. 6d.

EASIEST FRENCH READER

By MARC CEPPI. Illustrated, with special exercises and with or without full Vocabulary. 1s. 6d. net.

"Educationally sound . . . These little sketches are full of interest."—*Times Educational Supplement*.

The types used in these books conform to the standard of the British Association.

NOUVEAUX RÉCITS HEROÏQUES

Fully Illustrated. With or without Vocabulary. 1s. 9d. net. Stories of the Great War, uniform with "Récits Héroïques" (1s. 9d.) and "C'est la Guerre" (1s. 6d.).

"There is no doubt that these tales will be read with absorbed interest by all the children who are at all capable of doing so. The last story, 'La Mort du Tank,' is exciting enough for any guide, scout or cadet."—*Times Educational Supplement*.

JEAN-ROBERT FLAMBARD, POTACHE

By M. A. DELANY, Professeur au Lycée de Tours. Illustrated from special photographs. Crown 8vo. 1s. 6d. net; or with Vocabulary and Notes, 2s. net.

"This account of a French lycée is delightful."—*The Journal of Education*.

FRENCH TABLES, including Adjectives, Pronouns and Irregular Verbs, with hints for Composition

By H. PUCKLE, M.A., Modern Language Master, Uppingham School, and formerly Master of the Army Class, Felsted School. Crown 4to. 1s. 6d.

This little book is an attempt to tabulate the chief elementary points of French Grammar on the lines of Mathematical Tables.

G. BELL AND SONS, LTD., York House, Portugal Street, W.C.2

dary-school teachers just as the National Union does primary. Both Advisory Committees have plenty of work before them in which they may justify their existence: the elementary have the greater amount in degree, the secondary in kind, since secondary education is at present full of anomalies which Local Authorities will have to face as they come to survey their educational areas and make comprehensive schemes under the Education Act of 1918.

At their summer conference the Association of Head Mistresses passed a series of resolutions, some of which deserve the widest publicity as representing the considered views of a body of practical teachers and educational organizers. Dealing, among other matters, with the "First School Examination" in secondary schools, they find:

The School Examinations.

that a candidate who has passed the First Examination without obtaining exemption from a Matriculation Examination and who subsequently obtains a higher certificate, should be exempted from the Matriculation or other University Entrance Examination; that a certificate of a Second Examination should entitle the holder to exemption from any University Intermediate Examination in the appropriate faculty; that the Second Examination should be organized on a basis of subjects and not of groups; and that the Second Examination should consist of not less than four subjects, of which two at least should be principal subjects.

It is now more than a year since the Departmental Committees on Science and Modern Languages issued reports which were welcomed as, in the main, pre-eminently sound. Yet the Government, so far as is known, have taken no steps towards putting their recommendations into practice. The Committee on English Language and Literature, now sitting, will presently be issuing yet a third report. Its conclusions—though they might have carried even greater weight had its membership included two or three more persons actually engaged in teaching in secondary schools—will be, no doubt, equally valuable. When the recommendations of a report are met by serious adverse criticism it is easily understood that the Board of Education may hesitate to advise action. Yet in the case, at least, of science and modern languages the great majority of teachers of those subjects are most anxious to see the recommendations carried out. The need is urgent, and the corresponding loss in educational efficiency very great.

Both the Assistant Mistresses' and the Assistant Masters' Associations are sending representatives (Miss Laurie and Mr. G. D. Dunkerley) to the Educational Section of the British Association,

British Association.

which meets this year at Bournemouth. Among other subjects before the meeting the two reports on the teaching of science will be discussed. It will be remembered that the Association at its Newcastle meeting in 1916 appointed a committee under the chairmanship of Sir Richard Gregory to report upon science teaching in secondary schools "with particular reference to the essential place of science in general education." This report was issued in 1917. Meanwhile, the Departmental Committee was set up, but did not report until 1918. This, then, is the first opportunity that the British Association will have of comparing and discussing the two reports at a general meeting, and science teachers are looking forward to an interesting and useful discussion. Continuation schools will form the subject of discussion upon another morning.

SCHOOLS.

UNIVERSITY OF MANCHESTER.—Among the awards of scholarships, the following entrance scholarships have been gained by girls:—Charles Robinson Scholarship: M. Hancock, Manchester High School for Girls; E. E. Williams, Leeds Girls' High School. Theodores Exhibition (one-half): K. H. Peters, Shipley Girls' High School. Bleakley Scholarship: J. Single, Manchester High School for Girls. Alice Fay Exhibition: F. Susman, Manchester High School for Girls. University Scholarships for Women: (1) Rachel Scott Scholarship—A. Gaskell, Leigh Grammar School; (2) Science or Medicine—F. Ashworth, Bacup and Rawtenstall Secondary School; (3) Lydia Kemp—A. Watson, Rochdale Secondary School.

EDINBURGH, ST. GEORGE'S TRAINING COLLEGE.—At the recent examination of the Teachers' Training Syndicate, University of Cambridge, two out of the seven First Class Certificates granted for the Theory, History, and Practice of Education, and for Practical Efficiency were awarded to Miss M. F. Adams and Miss J. Harris. Six others were placed in the Second Class. Miss Adams has been appointed Assistant French Mistress at Manchester High School for Girls; Miss Lindsay, Classical Mistress

Gray, Bournemouth High School. Mabel Sharman Crawford Scholarship: Lucy Parker, North London Collegiate School.

PRIMARY SCHOOL NOTES.

A National Scale in Sight.

THE meeting of representatives of Local Education Authorities and primary school teachers, called on the initiative of the President of the Board of Education for the purpose of discussing the possibilities of a national policy in formulating scales of salaries for teachers, has been welcomed by all who have any regard for the future welfare of their country. The struggle between the Board of Education and the Local Education Authorities as to which should escape the responsibility of paying the teachers in the nation's schools a tolerable recompense for their labours has been carried on since 1870, and most of the defects in the English system of education may be traced directly or indirectly to this vicious and parsimonious policy. The break with tradition made by the bestowal of the supplementary grants and by the passing of the Teachers' Superannuation Act, gave a lead from the Board of Education which all the progressive Education Authorities have been anxious to follow; and, with the inspiration of the new Education Bill to direct them, there is every reason for confidence

in the decisions which will be arrived at in the forthcoming conferences between the parties particularly concerned.

The Call to the Universities.

THE call upon the organizing capacity of the Universities promises to be more heavy than that imposed upon any other branch of education; and of all departments of University work none has a more direct influence upon the welfare of the nation than that which deals with the training of its teachers. The problem of supplying teachers for the new continuation schools possesses peculiar difficulties, and it is of vital importance that those who are to be responsible for the conduct of these schools should be in every respect worthy pioneers; any failure in the personnel of the staffs is likely to be followed by disastrous effects upon the whole system of education. Few teachers can be spared from the secondary schools; on the other hand, there are thousands of experienced teachers in the primary schools who could be transferred to continuation schools if facilities for special training were provided by the Universities. Such training could quite suitably be given by means of degree or other courses, wholly or partly arranged after school hours. There is a growing desire among teachers who have some University qualifications to complete these in view of the new calls made by the Education Act. It is unlikely that men students, at all events, will in the future care to go to the ordinary training colleges unless facilities are available for taking full degree courses; and there is a general feeling that such colleges should now become constituent parts of the nearest University. If the Universities would establish tutorial degree courses at suitable centres within their spheres of influence, the outlook for continued education would be considerably improved.

N.U.T. Notes.

THE referendum of the N.U.T. in favour of the principle of equal pay for men and women has been followed by the production of a scale of salaries based upon terms of absolute equality. Quite an unexpected development has been the spontaneous movement of men teachers into sectional associations pledged to insist upon differential scales of salary in favour of men. This may be regarded as the counterpart to the very strong union of women teachers, which has pursued its policy with aggression. The new

(Continued on page 612.)

700 MEDALS AND PRIZES!!!

STUDENT'S ELEMENTARY BOOK-KEEPING

By ARTHUR FIELDHOUSE, Accountant,
66 West Parade, Huddersfield,

who will forward copy **Index** and **Specimen Pages** on receipt of
Post Card addressed to **P.O. Box A 27, Huddersfield.**

367 Pages. 25th Edition. Post free 3/4.
100 Exercises. 350 Questions.

The ONLY TEXTBOOK to which there is a FULL KEY.

While this textbook more than covers all **Elementary Examinations** in this subject, its special design is to meet the requirements of the excellent Syllabuses issued by the **Royal Society of Arts, the College of Preceptors, Oxford and Cambridge Locals, the London Chamber of Commerce, and the National Union of Teachers.**

The **exercises** and the principles introduced therein are so carefully **graded** in point of difficulty that the student is trained to work the most difficult set of transactions without being appalled at any stage of his study. No exercise is too long or too complicated to be completed between each lesson. The **Questions** will be found very useful for testing the student's knowledge at each stage of his work. **Examination Papers** of the **Royal Society of Arts, the College of Preceptors, the Oxford and Cambridge Locals, and the L.C.C.,** are included.

LONDON: SIMPKIN, MARSHALL, HAMILTON, KENT, & CO., LTD.

THE STUDENT'S BUSINESS METHODS

and

Commercial Correspondence.

By ARTHUR FIELDHOUSE, Accountant,
66 West Parade, Huddersfield,

who will forward **Specimen Pages** and **Index** on receipt of Post Card
addressed to **P.O. Box A 27, Huddersfield.**

Ninth Edition. 380 Pages.
3/4 Post free.

80 TEST and EXAMINATION PAPERS, containing
1,300 QUESTIONS.

This is the only **practical, up-to-date** book on **Commercial Correspondence** and **Office Work**, and is characterized by the same qualities that have made the author's other textbooks so popular. The lessons are well **graduated**, and the **teacher** is **saved the drudgery** of preparing **Test Papers**, one of which follows every chapter, in addition to numerous **Examination Papers**. **PRACTICAL work** is provided in the **Series of Business Transactions** included in some of the Test Papers. It is the only **Complete Guide**, covering all the **Elementary Examinations**. Small-priced books may be had on the subject, but as they do not cover the Syllabuses they are dear at a gift. **Efficiency** should be the first consideration. It is an excellent **Hand-book** for the **Junior** in the **Office**. **70,000 copies sold.**

organization of the men will tend to prevent the equal pay resolution of the Union from becoming a practical policy. The few Education Committees inclined to carry it into effect would find it difficult to do so in face of the strong opposition of public opinion, backed by the solid support of the men teachers. The long view appears to be that the two sections will continue to work together in the Union, and that, while the request for equal financial treatment will be preferred jointly, it will be left to the women to prove their case before the various Authorities. Three more members of the Executive have been appointed officials of the Union, making five in all. Although applications have been received from all parts of the country, only members of the Executive have yet been selected. While such action may be criticized upon several grounds, there will be general recognition of the great service rendered to the Union by Executive members who have worked arduously and gratuitously. And, since such members are cognizant with the duties requiring fulfilment, it is clear that they enjoy a substantial advantage over other candidates in applying for these particular offices. The salaries range from £400 to £500 per annum, by annual increments of £25. The salary of Sir James Yoxall was raised by the Executive to £1,250 as from January 1, 1919. There is, in addition, a pension scheme for officers similar to that of the Government superannuation scheme for teachers.

PRIZE COMPETITIONS.

WE have not received the name and address of the winner of the Translation Prize for July.

THE AUGUST COMPETITION.

The identification of quotations is apparently not a popular task; very few competitors took the field. The prize is awarded to "Gothicus"; *proxime accessit* "Bésigue." We subjoin a key and notes, for some of which we are indebted to the competitors.

1. H. W. Longfellow's translation of one of the epigrams of F. von Logau (1605-55), which is itself an expansion of an old

saying, found in the Sceptic philosopher Sextus Empiricus (*circa* A.D. 200):

ὄψι θεῶν ἀλέουσι μύλοι, ἀλέουσι δὲ λεπτά.

It occurs in slightly different forms in the Sibylline Oracles and elsewhere in post-classical writers. Probably of Eastern origin. Some dictionaries of quotations give "God's mills grind slow, but they grind trouble," as an Eastern proverb. George Herbert has "God's mill grinds slow but sure" in "Jacula Prudentum" (1651).

2. Ella Wheeler Wilcox: "Solitude."

3. R. L. Stevenson: "Virginibus Puerisque." Compare Hazlitt, "On going a Journey," the first paragraph. Also Dryden, "Such only enjoy the country as are capable of thinking when they are there; then they are prepared for solitude, and in that case solitude is prepared for them"; and, as a contrast, Publius Syrus, "Comes jucundus in via pro vehiculo est."

4. Opening lines of William Blake's "Auguries of Innocence."

5. Michelet: "Une Année du Collège de France."

6. Shelley: "A Defence of Poetry." Contrasts are easily found. There are Shelley's own lines: "Our sweetest songs are those which tell of saddest thought."

"Most wretched men

Are cradled into poetry by wrong;

They learn in suffering what they teach in song."

Lamartine says: "La poésie n'a jamais su exprimer le bonheur comme elle exprime la douleur" ("Nouvelles Méditations"). Tennyson spoke of the writing of "In Memoriam" as

"The sad mechanic exercise,
Like dull narcotics, numbing pain."

Shelley would probably have denied the contradiction. The paragraph from which the quotation was taken suggests that by "happiest" he meant something more than pleasurable.

7. Pope: "Essay on Man"; based on Pascal's "Pensées"—"Juge de toutes choses, imbécile ver de terre, dépositaire du vrai, cloaque d'incertitude et d'erreur, gloire et rébut de l'univers."

8. Burke: "Reflections on the French Revolution."

(Continued on page 614.)

"Well suited for its purpose. The examples and illustrations are particularly excellent."—*Spectator*.
"Has also supplied a series of Examination Papers that should prove most useful to students."—*Literary World*.

GIRTON COLLEGE STUDIES, No. 4.

A NEW LAW OF THOUGHT AND ITS LOGICAL BEARINGS.

By E. E. CONSTANCE JONES, Author of "A Primer of Logic."

Cambridge: At the University Press.

Price Two Shillings net.

"Miss Jones has made a great discovery. She has discovered the Law of Significant Assertion, and also that it does not find a place among those which Logic enumerates as the self-evident Laws of Thought."—*Mind*.
"Miss Jones seems to have made out a good case for regarding the Law of Significant Assertion as a fundamental Law of Thought."—Prof. STOUT.
"I may here refer very briefly to Miss Jones's interesting treatise on 'A New Law of Thought.' . . . The substitution of S is P, as the general formula of thinking, for A is A, which taken as such a formula is meaningless, will I hope be adopted by logical theory and practice. By dealing with a difficulty which so great a logician as Lotze could not overcome, the suggestion shows itself to possess a considerable value."—Dr. BERNARD BOSANQUET.

You can WIN SUCCESS in 1920.

Write fully to—

ARTHUR McALISTER, B.A. (Cantab.), 209 CASTLE BOULEVARD, NOTTINGHAM.

9. Ibsen, but we regret that we have lost the reference. *Not* meant ironically.

10. The concluding sentence of Motley's "Rise of the Dutch Republic." The hero is William of Orange.

11. Goldsmith: "Vicar of Wakefield."

12. A once celebrated couplet from "England's Trust," a poem extolling feudalism, written by the late Duke of Rutland, better known as Lord John Manners (1841).

13. Schiller: "Das Weibliche Ideal."

14. George Eliot: "Daniel Deronda." Compare Austin Dobson, "A Gentleman of the Old School."

15. Conan Doyle: "A Lost World"—put into the mouth of Prof. Challenger, who is a gentle caricature of a certain type of scientist.

16. Tennyson. "Lancelot and Elaine." Compare Nathaniel Hawthorne, "Transformation": "As an angel you are not amiss, but as a human creature, and a woman among earthly men and women, you need a sin to soften you." Also Pliny the younger: "Nihil peccat nisi quod nihil peccat."

17. Leslie Stephen: "Sir Walter Scott."

18. Alfred de Vigny: "La Maison du Berger."

19. Emerson: "Self-reliance." Compare R. L. Stevenson: "So far of Respectability; what the Covenanters used to call 'rank conformity,' the deadliest gag and wet blanket which can be laid on men."

20. Swinburne: "Les Casquets." The last two lines are from Job xxviii, 7 (A.V.).

A Prize of Two Guineas is offered for the best translation of the following description of the gardens of the Baths of Diocletian in André Maurel's "Un mois à Rome":—

Le printemps se répandait autour de nous, entre mille marbres, débris informes dont leur antiquité interdit l'abandon. Le long des plates-bandes, les pierres sont alignées, que caressent et enlacent les plantes. Les pierres émergent d'entre les fleurs, les fleurs pointent à travers les pierres. C'est l'émouvante reprise de la nature sur l'œuvre humaine, et, dans la joie de revivre, fleurs et pierres brillent d'un même éclat. Aristoloches dansent autour des fûts brisés. Colonnes tronquées offrent leur appui à la fragilité des lianes et soutiennent les calices blancs. Qu'ils semblent beaux, pourtant, ces restes ainsi parés! magnifiques et dignes des temples les plus fiers. Ils empruntent aux glycines leur splendeur immortelle et se perpétuent avec elles. Étroitement unis, on ne sait plus qui enfanta l'autre du chapiteau ou de l'acanthé, si la guirlande de chêne veut devenir œillet ou la vigne vierge dessiner la frise, lequel veut mourir en beauté et renaître en parfum. Mais non! c'est bien la pierre qui renaît. Un grand quadrilatère de sarcophages nus et dépouillés de leurs reliefs délimite, au delà d'une large allée, les parterres. Et les voici qui débordent de roses. Nées dans les cerceaux, les roses grimpent et se déroulent à l'infini, passent d'une tombe à l'autre, étendent sans fin les bras de leurs branches qui vont ainsi de sépulcre en sépulcre faire sourire la mort. La beauté de cette chaîne, de ces chaînes de fleurs attachant le marbre et en jaillissant est indicible. Déjà, au Forum, la merveille est énivrante des glycines et des lauriers parmi les marbres jonchés. Pauvre Forum de bonne volonté, de précaution surtout. Ici point n'est besoin de veiller à ne pas trop cacher. La beauté ne peut être que commune, la gloire que collective. Que la mort ainsi parée serait heureuse et belle!

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than ONCE during a given year, though the name of the competitor gaining the first place will be published each month.

All competitions must reach the Office by the first post on September 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C. 4.

The number of girls at present in the School is 398 (day scholars, 292; boarders, 106). The Head Mistress will not be allowed to take boarders.

Candidates should send forty copies (printed or typed) of their application and testimonials (which should not exceed three) on or before Wednesday 17th September, 1919, to A. H. ALLEN, Clerk of the Harpur Trust, Bedford, from whom any further information can be obtained.

No personal or other application should be made by or on behalf of any candidate to any member of the Governing Body.

By order,

A. H. ALLEN,
Clerk of the Harpur Trust,

The Harpur Trust Office,
1st August, 1919.

NORFOLK EDUCATION COM-

MITTEE.—Wanted, at once, for The Lawn Secondary School for Girls (North Walsham) ASSISTANT MISTRESS, well qualified in Science and Mathematics. Applicants must be graduates of a British University or possess equivalent qualifications. Salary £150 to £260. Previous secondary school teaching experience will be taken into account in fixing commencing salary. Applications, stating age, qualifications, experience, and earliest date available, together with copies of three recent testimonials, should reach the SECRETARY, Norfolk Education Committee, Shire Hall, Norwich, on or before September 10. No forms required.

Posts Vacant—continued.

AUCKLAND EDUCATION BOARD, NEW ZEALAND.

Applications for the appointment of PRINCIPAL of the Auckland Training College (New Zealand) will be received by the undersigned on or before Friday, the 31st day of October, 1919.

The salary is £650 a year, rising to £700 a year, and there are no other emoluments. Actual travelling expenses by direct steamer will be paid on arrival at Auckland.

The Principal will be expected to reach Auckland by the first day of February, 1920.

He will be required to give his whole time to the duties of the office, such duties to include inter alia the general control of the Training College and of Normal Schools connected therewith. He will, with the concurrence of the University College, act as Professor or Lecturer on Education at the Auckland University College. He will not be at liberty to undertake any other tuition or educational work of any kind whatever.

Three years' employment will be guaranteed, the engagement to be afterwards terminable by six months' notice on either side at any time.

Applications must be made on printed forms, which may be obtained from the HIGH COMMISSIONER FOR NEW ZEALAND, Strand, London, W.C., and must be accompanied by a certificate from a registered medical practitioner of the applicant's physical fitness for the position.

E. C. PURDIE.

Secretary.

Education Office, Auckland, New Zealand.
2nd June, 1919.

Truman & Knightley

SCHOLASTIC AGENTS LTD

TO ASSISTANT MASTERS ASSISTANT MISTRESSES LADY MATRONS

There are still a large number of remunerative appointments for the coming term in Public and Private Schools at home and abroad on Messrs. Truman and Knightley's books, and instructions regarding many January vacancies have already been received.

There is no charge for registration. The requirements of each applicant receive careful consideration and attention, and the commission charged to those for whom an appointment is secured is very moderate.

SCHOOL TRANSFER DEPARTMENT.

Ladies and Gentlemen seeking Partnerships in, or to take over schools of their own, should communicate personally with Mr. TRUMAN, who undertakes all negotiations connected with the Transfer of Schools, and who is in a position to offer assistance and sound advice to purchasers, to whom no charge is made.

BOOKS FOR LOWER AND MIDDLE FORMS

PUBLISHED AT THE UNIVERSITY TUTORIAL PRESS.

Mathematics and Science.

ALGEBRA, JUNIOR. By A. G. CRACKNELL, M.A., B.Sc., and AUGUSTUS BARRACLOUGH, M.A. **3s. 6d.** With Answers, **4s.**
"Maintains the high standard of excellence we are accustomed to expect from so well known a source. The treatment of the graphic portion is particularly good."—*Journal of the Assistant Masters' Association.*

ALGEBRA, TEST QUESTIONS IN JUNIOR. By F. ROSENBERG, M.A., B.Sc. **1s. 6d.** With Answers, **1s. 9d.**
"A handy little volume containing a complete series of examples carefully graded, suitable for Junior classes."—*Educator.*

ARITHMETIC, THE JUNIOR. By R. H. CHOPE, B.A.
With or without Answers. Third Edition. **3s. 6d.**
"The book is well got up, and has a quite good selection of examples throughout."—*Mathematical Gazette.*

ARITHMETIC, TEST QUESTIONS IN JUNIOR. **1s. 6d.**
With Answers, **1s. 9d.**
"A fine collection of exercises."—*School Guardian.*
"A useful and carefully arranged collection of test questions for the use of lower classes . . . may be very warmly recommended."—*Bookseller.*

ARITHMETIC, PRELIMINARY. By AUGUSTUS BARRACLOUGH, M.A. **2s.** With Answers, **2s. 3d.**
"The chapters are clearly written, carefully arranged, and accompanied with a plentiful supply of examples and exercises."—*School Guardian.*

BOTANY, JUNIOR. By FRANCIS CAVERS, D.Sc. **3s. 6d.**
"Dr. Cavers has achieved a useful little book."—*Journal of Botany.*

CHEMISTRY, JUNIOR. By R. H. ADIE, M.A., B.Sc. Second Edition. **3s. 6d.**
"A thoroughly sound course of practical instruction."—*Nature.*

CHEMISTRY, JUNIOR PRACTICAL. By H. W. BAUSOR, M.A. **1s. 6d.**
"An excellent guide for the beginner."—*Educational Times.*

CHEMISTRY PRELIMINARY. By H. W. BAUSOR, M.A. **2s.**
"It is an excellent little book and will make a clear understandable foundation for a systematic treatment of Chemistry in the higher forms."—*Educational News.*

GEOMETRY, JUNIOR. By A. G. CRACKNELL, M.A., B.Sc. **3s. 6d.**

"A simple treatment of the elements of Geometry. A feature of the book is the number of questions which require a numerical answer, incorrect and careless work being thereby easily checked."—*Schoolmaster.*

GEOMETRY, PRELIMINARY. By F. ROSENBERG, M.A., B.Sc. With or without Answers. **2s. 9d.**
"Will prove distinctly helpful to the beginner in the study of Geometry."—*Bookseller.*
"The explanations are clear and precise."—*Nature.*

HEAT, JUNIOR. By JOHN SATTERLY, D.Sc., M.A. **2s. 9d.**
"A remarkably clear exposition of the main principles of the science, such as is required by elementary students."—*Secondary School Journal.*

MAGNETISM AND ELECTRICITY, JUNIOR. By R. H. JUDE, D.Sc., M.A., and JOHN SATTERLY, D.Sc., M.A. **3s. 6d.**
"This book is one of the best regarded from the standpoint of exact thinking."—*Electrical Engineering.*

MECHANICS, JUNIOR. By F. ROSENBERG, M.A., B.Sc. **3s. 6d.** A beginner's course of reading in Dynamics and Statics.
"The book possesses all the usual characteristics and good qualities of its fellows."—*Schoolmaster.*

MECHANICS AND PHYSICS, AN INTRODUCTORY COURSE OF. By W. M. HOOTON, M.A., M.Sc., and ALFRED MATHIAS. **2s.**
A practical Course of Mechanics and Heat for Beginners.
"This book is intended for technical students, but it will be found very useful as a text-book for students in ordinary secondary schools."—*Secondary Education.*
"Many evening-class teachers who have to teach these subjects without algebra will be glad to note so simple and cheap a manual for their classes."—*Guardian.*

SCIENCE, JUNIOR EXPERIMENTAL. By W. M. HOOTON, M.A., M.Sc., F.I.C. Second Edition. **3s. 6d.**
"The explanations are clear, and we can recommend the work heartily."—*Secondary Education.*

SOUND AND LIGHT, JUNIOR. By K. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. **3s. 6d.**
"Reaches a high standard with plenty of practical work and exercises."—*Guardian.*

Languages, History, and Geography.

ENGLISH COMPOSITION, JUNIOR. By E. W. EDMUNDS, M.A., B.Sc. **2s.**
"This excellent manual makes plain for the young pupil the essentials of good writing. Can be heartily recommended."—*Education.*

ENGLISH GRAMMAR, JUNIOR. With Parsing and Analysis. By A. M. WALMSLEY, M.A. Second Edition. **2s.**
"The work of a practical teacher who knows the value of compromise between the old and the new methods."—*Journal of the Assistant Masters' Association.*

ENGLISH GRAMMAR AND COMPOSITION, JUNIOR. In one volume. **3s. 6d.**

ENGLISH COURSE, PRELIMINARY. By A. M. WALMSLEY, M.A. **2s.**
"The author has kept in view the real aim of grammar, namely, 'the production of good English.'"—*Athenæum.*

FRENCH COURSE, NEW JUNIOR. By G. A. ROBERTS, M.A. **3s. 6d.**
"The book becomes a serious rival to those existing."—*Schoolmaster.*

FRENCH COURSE, PRELIMINARY. By H. J. CHAYTOR, M.A., and H. E. TRUELOVE, B.A. Second Edition. **2s.**
"An excellent first year's work, well arranged on systematic lines, with due regard to the advantages of the Direct Method, and also to the necessity for thoroughness in the acquisition of the language."—*Athenæum.*

FRENCH COURSE, DIRECT. By H. J. CHAYTOR, M.A. **2s.** With Vocabulary, French-English, **2s. 9d.**
"Mr. Chaytor is a teacher of experience, and his book does him credit."—*School World.*

FRENCH READER, NEW JUNIOR. By J. P. R. MARICHAL, L. ès L., and L. J. GARDINER, M.A. **2s. 9d.**
"Consists of well-chosen literary extracts in French."—*Education.*

GEOGRAPHY, JUNIOR. By G. C. FRY, M.Sc. **3s. 6d.**
"The matter is well arranged, the maps and diagrams are good, and the questions render the book a thoroughly practical aid."—*Schoolmaster.*

GEOGRAPHY, PRELIMINARY. By E. G. HODGKISON, B.A. **2s.**

"An admirable textbook, well suited to the needs of pupils."—*Literary World.*

GERMAN COURSE, DIRECT. By H. J. CHAYTOR, M.A. **3s.**
"Can be highly recommended for first-year students."—*School Guardian.*

HISTORY OF ENGLAND, PRELIMINARY. By M. K. ELLIOTT, Honours in the Historical Tripos, Cambridge, and M. S. ELLIOTT, B.A., Cambridge Geography Diploma. With Illustrations. **2s. 9d.**
"In addition to an outline of political events it tries to give some idea of social and constitutional development, and also to connect history with geography. It is clearly written and well illustrated."—*School World.*

HISTORY OF ENGLAND, SCHOOL. By M. E. CARTER, Honour School of Modern History, Oxford. **4s. 6d.**
"The essential outlines of the subject are presented in the most easily digestible form."—*Guardian.*

LATIN COURSE, NEW JUNIOR. By J. V. THOMPSON, M.A., and LL. M. PENN, M.A. **4s. 6d.**
"A very successful compromise between the old and the new methods."—*Journal of the Assistant Masters' Association.*

LATIN READER, NEW JUNIOR. By A. J. TATE, M.A. **2s. 9d.**
"The pieces are interesting and varied."—*School World.*
"Mr. Tate has shown great judgment in the extracts he has chosen."—*Bookseller.*

SHAKESPEARE, THE JUNIOR. "As You Like It," "Macbeth," "Merchant of Venice," "Much Ado About Nothing," "Tempest." Each **1s. 9d.**

SPELLING AND PUNCTUATION (with Pieces for Dictation). By HARRY SHOOSMITH, M.A. **1s.**
"An excellent little book outside and in."—*Literary World.*
"A useful little book for schools. It is very complete, and seems to deal with every difficulty which the pupil is likely to meet."—*Oxford Magazine.*

THE STANDARD ENGLISH CLASSICS SERIES.

While not encumbered with editorial matter, each volume in this series contains notes and introductory material designed to help the student to form a critical estimate of the classic as a work of art, and to appreciate the reason for the place which has been assigned in literature to the book and its writer.

Some 60 volumes, of which the following are a selection, are at present included in the Series. A complete list will be sent post free on application.

Arnold: Sohrab and Rustum (with other Poems including "Thyrsis" and "The Scholar Gipsy"). Edited by W. P. TRENT and W. T. BREWSTER. 1s. 6d. net.

Austen: Pride and Prejudice. Edited by J. F. SICHA. 3s. net.

Burke: Speech on American Taxation. Edited by J. H. MOFFATT. 1s. 6d. net.

Burke: Speech on Conciliation with America. Edited by H. LAMONT. 1s. 9d. net.

Coleridge: The Ancient Mariner, Christabel, Kubla Khan. Edited by L. R. GIBBS. 1s. 6d. net.

Dickens: A Tale of Two Cities. Edited by J. W. LINN. 2s. 9d. net.

Elliot: Silas Marner. Edited by R. A. WITHAM. 1s. 9d. net.

Gaskell: Cranford. Edited by W. E. SIMONDS. 1s. 9d. net.

Goldsmith: The Deserted Village, The Traveller, GRAY'S Elegy. Edited by L. POUND. 1s. 6d. net.

Goldsmith: She Stoops to Conquer. Edited by D. MILES. 1s. 9d. net.

Goldsmith: Vicar of Wakefield. Edited by D. H. MONTGOMERY. 1s. 9d. net.

Lamb: Essays of Elia (First Series). Edited by G. A. WAUCHOPE. 2s. 3d. net.

Milton: Paradise Lost, Books I and III, and Lycidas. Edited by H. B. SPRAGUE. 1s. 9d. net.

Pope: Selections (including an Essay on Criticism and An Essay on Man). Edited by T. M. PARROTT. 1s. 9d. net.

Thackeray: History of Henry Esmond, Esq. Edited by H. B. MOORE. 3s. 3d. net.

ENGLISH LITERATURE.

Its History and Significance for the Life of the English Speaking World. By WILLIAM J. LONG, Ph.D. 8vo, cloth. 597 pages. Illustrated. Price 6s. 6d. net.

A book, the object of which is to create or encourage in the student the desire to read the best books and to know literature itself rather than what has been written about literature. The volume bears evidence of wide scholarship, but is written with a simplicity and charm of style which makes it capable of being understood and enjoyed by students in the Upper Forms of Secondary Schools.

(A Prospectus of English Literature will be sent post free on application.)

MODERN LANGUAGES.

French.

Cornille: Le Cid. Edited by C. SEARLES. 2s. 3d. net.

Labiche and Martin: Le Voyage de Monsieur Perrichon. Edited by I. H. B. SPIERS. 1s. 6d. net.

La Fontaine: One Hundred Fables. Edited by O. B. SUPER. 2s. 3d. net.

Molière: Les Précieuses Ridicules. Edited by W. M. DAVIS. 2s. 6d. net.

Racine: Andromaque. Edited by C. SEARLES. 2s. 3d. net.

JUST PUBLISHED.

LE FRANÇAIS POUR TOUS par la méthode directe. By NOËLIE DUBRULÉ. 12mo, cloth. Illustrated. 264 pages. 4s. net.

An introductory course in French embodying the principles of the direct method in a modified form, and containing many interesting and attractive features. A picture forms the basis of each lesson. Throughout the book oral work holds an important place; "permutation" exercises furnish the necessary drill in grammar, while, as an aid to the acquirement of a vocabulary, *jeux de mémoire, chansons, &c.*, are frequently introduced.

Full particulars of any of the above and a complete list of publications in French, German, Spanish, and Italian will be sent post free on application.

German.

Clough's Correspondence College.

L.L.A. Examination.

Advantages of the Diploma of L.L.A.

Many Educational Authorities grant extra remuneration to teachers who hold the L.L.A. Diploma.

It is a University Qualification of great value to Lady Teachers who wish to secure Head Teacherships in Elementary Schools or good positions in Secondary Schools.

NEW COURSES NOW COMMENCING FOR L.L.A. 1920.

UP-TO-DATE PAPERS.

BEST PREPARATION.

Write for Syllabus and particulars. Do not delay.

43 Oxford Street,
Spondon.
Aug. 12th, 1919.

DEAR SIR,—

I'm so delighted with the result of L.L.A. which this year I have completed with Logic (Pass) and **English Literature (Honours—First Class)**.

I don't know how to thank you enough for your splendid tuition, without which I had no hope of success. The questions I answered for you proved my "guides, counsellors, and friends" on the great Examination day.

For your infinite care and patience with my numerous blunders, I beg you and your excellent tutors to accept my sincere thanks.

I am,
Yours gratefully,
BEATRICE HALLAM.

G. B. Clough, Esq.,
Temple Chambers.

12.8.1919.

DEAR SIR,—

The result of the recent L.L.A. Examination came yesterday, and I find that I am successful in each of the subjects for which I entered.

I have now completed the required number for either the **Teachers' Honours Diploma** or for the ordinary one.

I must once again thank you for the well-planned course of study which has been excellent throughout, the notes especially being most helpful.

I shall recommend your classes whenever possible.

I am,
Yours truly,
EDITH WILLIAMS.

For particulars of any of Clough's Classes—PUPIL TEACHER, PRELIMINARY CERTIFICATE, CERTIFICATE, MATRICULATION, OXFORD and CAMBRIDGE LOCALS (Junior and Senior), A.C.P., L.C.P., L.L.A., HIGHER FROEBEL—write at once to THE SECRETARY,

Clough's Correspondence College, Temple Chambers, London, E.C.4.

REVIEWS AND MINOR NOTICES.

THE STUDY OF ITALIAN.

- (1) *A Short Italian Dictionary*. Vol. I: *Italian-English*. By ALFRED HOARE. (9s. net. Cambridge University Press.) (2) *English-Italian*. By ALFRED HOARE. (7s. 6d. net. Cambridge University Press.) (3) *A New Italian Grammar*. By ERNESTO GRILLO. (6s. net. Blackie.) (4) *A Rapid Italian Course*. By WALTER RIPMAN. (4s. net. Dent.) (5) *Italian Grammar Self-taught*. By A. C. PANAGULLI. Second Edition, revised and enlarged. (In paper wrapper, 1s. 9d. net; Key to ditto, 9d. net. Marlborough.)

Lovers of Italy (and there are many in England) have, we think, begun to be aware that a knowledge of Italy which is limited to a traveller's experience in that country, to an acquaintance with the chief schools of Italian painting, and to a familiarity with some useful phrases in the language, is, after all, only the knowledge acquired by a *touriste curieux* and does not go very deep. It is true that a more extended knowledge of men and things in Italy has been gained by families domiciled there, members of which have described Italy from within, and these impressions have had a certain political and social value. Italy, too, has for many generations formed a poetic and romantic background for foreign writers. The novelist is inclined to use the Italian atmosphere as a forcing-house for his characters. The British and American essayist also has turned his phrases happily in Venice and in Florence and in Rome. But our greatest recent contributions to an understanding of Italy, in her historic past and her present, have been—first, the school of literary criticism which we associate with the work of Dr. Toynbee and Dr. Edmund Gardner, which, in scholarly treatment and sympathetic approach, is probably unmatched except in Italy herself; and, secondly, the historical narrative and criticism of Mr. Trevelyan, which has made the great figures of the men who struggled for Italian liberty real and living to us.

But, except for the work of these scholars, England has contributed very little to the interest in and understanding of Italian life. One reason, no doubt, for this passive attitude has been the want of clear guidance in the study of the Italian language. Now, however, that the war has brought about a closer contact between the two nations, and our social and political union has become an object of the first importance to England as well as to Italy, we welcome the timely appearance of a number of practical books on the subject of the Italian tongue. Some of these books which have recently appeared are intended for school use, and, no doubt, many schools will be considering the possibility of encouraging the study of Italian as a second foreign language. It is true that the value of Spanish as a commercial medium has at last been recognized, and Spain has also its fine epic and dramatic literature to offer us. But Italian has its claims upon us too. In literature it has an ancient and very rich store of material which has been continuously enlarged. Italy has her epic, her lyric and her drama, and her modern literary art. Experiments in the psychological novel, in new forms of verse, in the writing of historical records and impressions, have taken their rise in Italy. As a school subject, too, Italian is an inflected language which, in its opportunities for logical training, is not inferior to Latin and Greek, while the language is at once more elastic and artistic than German and gives chances for great beauty and novelty of expression. It is as capable of a clear and individual style as French. Italian is a developing tongue. In the technical arts and in the art of war Italy has produced new and suitable expressions in the vernacular, and these are not mere foreign accretions (as is so frequently the case in Germany), but they grow naturally from the spoken language.

It is the language of the present day in Italy that we need to know and use with ease. In the books before us a considerable amount of choice and selection has been exercised.

(1) and (2) For example, Mr. Hoare's "Short Italian Dictionary," intended, as he observes, for the English student, leaves out many antiquated English words, for which he would not need to find the Italian equivalent, and also leaves out Italian words that are no longer in current use and have only a historical interest.

(3) Dr. Grillo's "New Italian Grammar" has also a purely practical aim. As it is intended to be used by schools and commercial institutions as well as by Universities, it is shortened and compact, and it gives rules rather than reasons for rules. It uses, in fact, the Direct Method—it appeals to the ear, the memory, the habitual utterance, and is an excellent foundation for a closer historical study of the language. The exercises are suitable to the text and aim at familiarizing the student with current phrases by constant repetition of similar forms.

(4) The plan of Mr. Ripman's "Rapid Italian Course," which is modified from Dr. Alge's "Guida," is different, but suitable for those who wish to plunge into the language and gain readiness in reading the Italian text. Italian stories are the basis of the method; the exercises are either introductory or intended to make firmer the knowledge gained through reading. A few charming illustrations add an interest to the book.

(5) Prof. Panagulli's "Italian Grammar Self-taught" is a concise résumé of the elements of the language in a form that he has, no doubt, found useful in his own classes. It has the merit of simplicity, and the lessons are arranged, like black-board lessons, to appeal to the eye. It contains some short and varied extracts for reading, which would need to be considerably supplemented in class.

The student of Italian would find among these books something that would suit his needs at every stage. The dictionaries are indispensable and are in a form that is easy to handle.

MR. WELLS ADDRESSES TEACHERS.

The Undying Fire. By H. G. WELLS. (6s. net. Cassell.)

In his latest novel Mr. Wells continues that stern attack upon modern education which he began in "Joan and Peter." Of so much we are given notice in the dedication "to all schoolmasters and schoolmistresses and every teacher in the world." The sub-title, "a contemporary novel," is doubtless meant to convey to the reader that, though the literary shape of the book is cast in the mould of an ancient dramatic poem, the problems it deals with are those of the present hour. "The Undying Fire" is a modern adaptation of the Book of Job, and, if some of the religious newspapers are displeased with Mr. Wells's apparent irreverence, he can at least retort that he is no more irreverent than was the author of Job. Both are terribly in earnest; that is all.

In Mr. Wells's story, Job of the land of Uz becomes Mr. Job Huss, a great schoolmaster who has fallen on desperately evil days. The pseudo-comforter Eliphaz becomes Sir Eliphaz Burrows, a successful manufacturer of Temanite building blocks. Bildad appears as Mr. William Dad, Zophar as Mr. Joseph Farr (teacher of science in Mr. Huss's school), and Elihu of Barachel as Dr. Elihu Barrack, Huss's medical attendant. The development of the story is throughout loosely parallel to that of the ancient poem. We begin with a prologue in heaven, and with the ghastly misfortunes which befall the hapless schoolmaster, including a disease for which the sole but highly uncertain remedy is a serious operation. In his extremity, Huss is visited by Sir Eliphaz and Dad, two of his governors, and Farr, his scientific colleague. Like their Biblical prototypes, these worthies lift up their hands in pious horror at Huss's arraignment of the moral order, and a long discussion ensues, in the course of which they unfold a plan—the most unkindest cut of all—whereby Farr is in any case to become head master, and to transform the school into one where business shall be first, business last, and business all the time. As the original Job was next reproved by Elihu, so Huss is next reproved by Dr. Elihu Barrack. Then follows the operation, and while Huss is under the anæsthetic he has

a mental experience analogous to that of Job when the Almighty speaks to him out of the storm. Needless to say, the last chapter relates the schoolmaster's restoration to prosperity.

And what of the great mystery, as to which the Old Book has perhaps left little to be said, the mystery of unmerited suffering? "There burns," says Huss, "an undying fire in the hearts of men. By that fire I live. By that I know the God of my salvation. His Will is Truth; His Will is Service. He urges me to conflict, without consolations, without rewards. . . . He suffers—perhaps to triumph, and we must suffer and find our hope of triumph in Him. . . . Though the universe torment and slay me, yet will I trust in Him. And if He also must die—nevertheless, I can do no more. I must serve Him."

The teacher who is doing any good has this "undying fire" of God lit in his heart, and wants to light it wherever else it can be lit. If he turns out good business men, it is by aiming at making his boys more than business men. He thinks of chemistry and physics "not as a help to trading, but as a help to understanding," and he does not think of empire as "a commercial conspiracy fenced about with tariffs." He seeks to turn out men with hearts aflame for that Service which is God's Will. And, if we must have a catchword, salvation by history is a better catchword than salvation by test-tube. Such, if we read aright, is the gist of Mr. Wells's book. Some will complain, as some complained of "Joan and Peter," that its teaching is too indefinite to be useful. Of course, the answer is that, if you go to Mr. Wells at all, you must go to him, not for instruction, but for inspiration.

THE PAST AND PRESENT OF INDIA.

The Oxford History of India. From the Earliest Times to the End of 1911. By VINCENT A. SMITH, C.I.E. (12s. 6d. net. Clarendon Press.)

Napoleon declared that history is but a fable agreed upon. Until recent times this was literally true of the bulk of what passed for the history of India. Even now, spurious tradition and groundless myth permeate many departments of our literature—political, social, religious, and imaginative. For illustration, we need only refer to those modern novels that are supposed to be based on Indian history. But ignorance, prejudice, and perversion are just as abundant, if less evident, in many works of greater pretension. At the present moment distorted views of Indian life and thought are being widely distributed for political purposes, and Dr. Vincent Smith's volume therefore appears at a most opportune time.

The author of "The Oxford History of India" may justly claim what Macaulay regarded as the rarest of intellectual distinctions: he is "a really good historian," for he possesses knowledge, acumen, imagination, candour, and self-command. He can point a moral or propound a theory, but does so unobtrusively. In the main he is content with his proper function, to discover facts and to arrange them in a true perspective. Humour and irony he keeps well in hand. His book is not only unlike any other in existence: to a great extent, it also supersedes all previous histories of India. It is the result of half a century's assiduous research and of thirty years' close contact with Indian conditions. As an official, the author was fortunate in gaining an intimate knowledge of land-settlement work. No one should presume to write on Indian affairs who does not know the village cultivator, an extraordinary amalgam of shrewdness and simplicity, of ignorance and insight, of obstinacy and obedience, of energy and enervation. As judge and commissioner, Dr. Vincent Smith had further opportunities of investigating the social and economic life of the people and of collecting materials for sound judgment on the innumerable problems that must be faced by an original and unprejudiced inquirer. His tastes drew him to the study of oriental art and antiquities, and of all those material and spiritual deposits where the key to many enigmas lay buried.

The successive editions of the author's "Early History of

MACMILLAN & CO., LTD., ST. MARTIN'S STREET, LONDON, W.C.2.

India" bear witness to his unremitting industry, and the present work gives, with striking skill in compression, the essence of the researches of all the leading authorities, both old and new, Indian and European. His review extends from the earliest times to the memorable visit of their Majesties in 1911. But a useful appendix and several pages of notes and additions bring the contents practically up to the date of publication. The outstanding characteristics of the latest Viceroy's, brilliant or mediocre, are aptly indicated, and help the reader to understand the dangers and uncertainties of India's future. Precipitate change is the chief peril in Indian administration.

The book is lavishly illustrated and has a full index. The introduction, which comprises a discussion of the caste system, is a brilliant piece of writing. Altogether, this volume is indispensable to every teacher and student of the history of India—that huge congeries of peoples whose welfare is still so closely dependent upon British rule.

EDUCATION.

Essays in Common-Sense Philosophy. By C. E. M. JOAD.
(8s. 6d. net. Headley.)

Not every reader of this journal is, or has been, a student of philosophy, but, on the other hand, there are probably few among the best teachers who take no interest whatever in philosophical questions. At any rate, to those who are so interested we unhesitatingly tender the advice to mark Mr. Joad's book as one to be read. In particular, to anyone (and there must be a great many) who had lost respect for those professional philosophers who spoke a language that nobody else understood, and who have been won back by the efforts of such writers as William James to bring philosophy down from the clouds, we strongly recommend Mr. Joad's eminently readable essays. In more senses than one he has made a brilliant, and we think a successful, effort to mediate between the "plain man," who regards the philosopher as "a spinner of academic sophistries," and the philosopher, who regards the "plain man" as an "unreflecting fool." Have we any knowledge of sensible objects as they really are, and are the "new realists" right or wrong in their contention? Is monism to be deposed from its enthronement on the philosophical chair, and to be replaced by pluralism? What is truth? and has the pragmatist helped us to a solution of that time-honoured riddle? What is the real nature of beauty? Is it a relation between mind and object, or is it inherent in the object? Does the pluralism here advocated imply the existence of universals, as well as of physical objects? What is to be said of that philosophical theory of the State which was made in Germany, which has been dallied with by others besides Germans, and which has brought Germany on to the rocks? Are we justified in saying that thought is free, in the sense that it is unchecked except by its own laws, or in our thinking are we only finding reasons for what we wish to believe? These are the problems which Mr. Joad discusses—clearly, candidly, and with a liveliness of style which ought to win him many readers.

The Voyage of a Vice-Chancellor. (6s. net. Cambridge University Press.)

"A. E. S.," the Vice-Chancellor of Cambridge University, here gives us some extracts from a private diary which he wrote whilst on an extensive tour in the United States during the autumn of 1918 as a member of the British University Mission—a mission with a political rather than an educational object. The voyage over, a great round ensued of visits, speeches, and banquets, which would at the time have made our rationed mouths water had we known. The delightful touches of humour, which we shall not spoil by tearing them from their context, alone make the diary worth reading. But, skilfully mingled with the fun, are a great many observations upon American colleges and Universities, all well worth noting as coming from so distinguished an observer. Everywhere the Mission was received with kindness—"kindness which came from the brain as well as the heart." Let us hope that it will help to bring about a more complete understanding than ever before between the intellectuals of the two countries.

Projects in the Primary Grades. By ALICE M. KRACKOWIZER.
(5s. net. Lippincott Company.)

This book expounds, both in principle and in detail, a plan of work for what are called in America the Kindergarten and the primary grades—i.e. for children under ten years of age. The general idea underlying the treatment is excellent. Every thoughtful teacher of young children knows the continuous contrast between the formal subjects—reading, writing, and number—which, as tradi-

tionally presented, possess no inherent interest for the child, and are, therefore, apt to be imposed upon him, so to speak, *ab extra*; and such subjects as nature lore, stories, and handwork, which possess an interest in their own right. The author of this book seeks to show how this opposition can be transcended, and in doing so she renders a service to any teacher who feels the difficulty and knows that she has not succeeded in solving it. Play, the constructive activities, social experience, Nature experience, and literature are considered in turn from the point of view of "purposeful activities," and it is then shown how the formal subjects may be approached from the same point of view. To the initiated, the fact that the writer draws her inspiration largely from such men as the late Colonel Parker and Prof. John Dewey will be proof enough that her work merits attention.

Handicaps of Childhood. By H. A. BRUCE.
(7s. 6d. net. Kegan Paul.)

Mr. Bruce here provides us with a sequel to "Psychology and Parenthood." His chief concern on this occasion is to demonstrate the importance of early training in the moral sphere. The book may be recommended to thoughtful parents, though it is well to add a warning. Recent researches by psychoanalysts and neurologists generally have been concerned largely with pathological cases, and, though they have led to results of great value, there is a dangerous tendency to generalize from the conclusions arrived at with abnormal persons to the case of the ordinary well balanced, healthy child. The subconscious remnants of early experiences have doubtless a profound influence on adult life, and parents will find many of Mr. Bruce's suggestions as to how to deal with young children of real practical value. To give the titles of a few of the chapters is to show how closely in touch with the everyday life of the nursery the book keeps. We name a few: "The Child who Sulks," "Jealousy," "Selfishness," "Bashfulness and Indecision," and "Fairy Tales that Handicap."

Auto-erotic Phenomena in Adolescence. By K. MENZIES.
With a Foreword by Dr. ERNEST JONES. (4s. 6d. net. Lewis.)

We commend this temperate and helpful treatment of a subject of grave importance to all parents, school teachers, and clergymen. The facts brought to light by present-day knowledge are presented in a fair-minded manner, and the problem is discussed both with full understanding and consummate delicacy.

ENGLISH.

"Gateways to Bookland."—(1) *Within the Gates.* (2) *Vistas of Romance.* (3) *In Kings' Gardens.* (3s., 2s. 8d., 3s. net. McDougall's Educational Co.)

A series of selections from writers of all sorts and conditions, ranging from Malory, Macaulay, Burke, Ruskin, and Froide to Ainsworth, C. M. Yonge, Charles Lever, and Mrs. Gaskell! The easier writers in the original, the more difficult in simple paraphrase. Meant for young children, the collection is rather above the average, and is fairly even in quality, though a few—Browning's "Patriot," for example—are of a higher standard than the great majority. All three books are well printed and bound, and profusely illustrated.

The "A. L." Bright Story Readers.—No. 73, Grade S: *The Tower of London.* By W. H. AINSWORTH. Abridged, with Notes, by W. H. WEBSTER. (7d.) No. 104, Grade P: *Havelok the Dane*, &c. By E. M. WHITAKER. (2½d.) No. 117, Grade I: *East o' the Sun and West o' the Moon*, &c. By Sir G. W. DASENT. Prepared by W. H. WEBSTER. (3½d.) No. 118, Grade I: *The Story of Merryind.* By FRANCES BROWNE. Prepared by W. H. WEBSTER. (3½d.) No. 119, Grade I, *The Dwarf's Banquet; The Boy and the Nis.* By THOMAS KEIGHTLEY. Prepared by W. H. WEBSTER. (3½d.) No. 136, Grade III: *Caliph for a Day* ("Arabian Nights' Entertainments"). Newly told by J. B. MARSHALL. (5d.) No. 240, Grade IV: *The Settlers in Canada.* By Captain MARRYAT. Abridged, with Notes, by W. H. WEBSTER. (6d.) (Leeds: E. J. Arnold.)

These excellently printed books may be recommended to teachers of reading looking for something attractive and interesting. They will serve equally satisfactorily for class work or for silent reading. The more advanced of the readers are provided with helpful notes and a short descriptive account of the author.

Verse-writing, with Exercises. By W. H. CARRUTH.
(4s. New York: Macmillan.)

The first half of this book is disappointing, the little essays being thin in texture. The second half is original, for plenty of exercises are set, hints are given, and, *rara avis in terris*, the editor prints

(Continued on page 634.)

Selections from Ovid's Heroides. By LEWIS and BROADBENT. 2s. 6d.
Selections from Ovid's Metamorphoses. By H. A. JACKSON. 2s.

MATHEMATICS.

- The Inductive Arithmetic.** By E. SANKEY.
 Pupils' Books, I-III, 4d. each; IV, V, VI, VII, 6d. each.
 Class Teachers' Books, with Answers, Notes on Method, and Oral Exercises. Books I to III, 1s. 6d. each; IV-VII, 2s. each.
A School Arithmetic. By A. C. JONES, Ph.D., and P. H. WYKES, M.A. 5s. 6d. Parts I-III, 2s. 6d. each.
Arithmetic for Schools. By J. P. KIRKMAN, M.A., and A. E. FIELD, M.A. 5s. With Answers, 5s. 6d.
Arnold's Half-Crown Arithmetic. By J. P. KIRKMAN and J. T. LITTLE. 2s. 6d.
Exercises in Arithmetic. By C. M. TAYLOR. Parts I-III, 1s. 6d. each, without Answers; 2s. each, with Answers.
Easy Arithmetic and Accounts. By E. SANKEY and G. A. LORD. Books I and II, 1s. 6d. each.
A School Algebra. By F. O. LANE, B.Sc., and J. A. C. LANE, M.A. 4s.; with Answers, 5s.
Elementary Algebra. By W. D. EGGAR, M.A. 4s. With Answers, 5s.
A First Formal Geometry. By R. WYKE BAYLISS. 2s. 6d.
Geometrical Exercises. By L. ASHCROFT, M.A. Parts I-IV, 4d. each.
Elements of Geometry. By Dr. R. LACHLAN and W. C. FLETCHER, H.M.I. 3s. 6d.
Elementary Geometry. By W. C. FLETCHER, M.A. 2s.
Practical Trigonometry. By H. C. PLAYNE, M.A., and R. C. FAWDRY, M.A. 3s.

PHYSICS and CHEMISTRY.

- A Textbook of Physics.** By Dr. R. S. WILLOWS. 9s. net.
Introduction to Practical Physics. By E. H. BARTON and T. P. BLACK. 5s.
Mechanics. By W. D. EGGAR, M.A. 4s.
Electricity and Magnetism. By C. E. ASHFORD. 4s. 6d.
Magnetism and Electricity. By E. W. KEMPSON. 3s. 6d.
Inorganic Chemistry for Schools. By W. M. HOOTON, M.A. 5s.
Elements of Inorganic Chemistry. By W. A. SHENSTONE, F.R.S. 6s. 6d.
Outlines of Inorganic Chemistry. By Dr. E. B. LUDLAM. 5s.

PHYSIOLOGY and PEDAGOGY.

- Elementary Physiology for Teachers.** By Dr. W. B. DRUMMOND. 2s. 6d.
A Manual of Physiology. By L. HILL, F.R.S. 7s. 6d.
Physiology for Beginners. By L. HILL, F.R.S. 1s. 6d.
Psychology for Teachers. By Prof. LLOYD MORGAN, F.R.S. 5s.
The Dawn of Mind. By M. DRUMMOND. 3s. 6d. net.
Experimental Pedagogy. By Dr. E. CLAPARÈDE. 5s. net.
Introduction to Child-Study. By Dr. W. B. DRUMMOND. 6s. net.

SINGING-CLASS MUSIC.

A series of entirely new Unison and Two-Part Songs for Treble Voices, with Piano Accompaniment and Sol-fa, in addition to Staff-Notation.

UNDER THE GENERAL EDITORSHIP OF
THOMAS F. DUNHILL,
 Professor at the Royal College of Music.

All the Songs have been specially composed for this series by the most distinguished British musicians, and are designed for use in Schools and Boys' or Girls' Choirs:—

UNISON SONGS.

- | | | | |

| 202. " " | *Lilies | ... | 3d. |
| 203. George Rathbone | *The Early Dawn of Day | ... | 4d. |
| 204. Edgar L. Bainton | *The Sea | ... | 4d. |

Songs marked * have just been added to the series.

London: EDWARD ARNOLD, 41 and 43 Maddox Street, W.1.

his own criticisms of the verse work of his class. All this should be useful. Many schools write English verse to-day, and no handbook on the subject exists. This book is rather too American for English schools, but it contains many useful suggestions.

Shakespeare: Henry IV. Part II. Edited by L. WINSTANLEY. (2s. 6d. Heath.)

This is one of the best editions on the market. The introduction, if slightly too long, is to the point, the analysis of the characters being particularly good. The notes—unencumbered with material which, however scholarly it may be, is little better than waste paper from the teacher's point of view—give just what is required and no more. The type and size of page are well proportioned to each other, and the general "get-up" is excellent. The book may be unreservedly recommended.

Shakespeare: The Tempest; The Comedy of Errors. Bankside Acting Edition. (1s. net each. Wells Gardner.)

If a school desires to act a Shakespearean play—"The Tempest" or any other, the instructions here given are general—these little books will be found most useful. The table of contents is the best recommendation: a general introduction (first principles, the stage, methods of acting, practical stage-management, costume, rehearsals, and the like), choice of actors and parts, properties needed, &c., and an acting text of the plays themselves.

The Victory Readers. Books I, II, III, and IV. (8d., 8d., 10d., 1s. Nelson.)

A collection of very simple prose stories and poems suitable for children six to eight or nine years old, some of them well known, but most of them original. The print is large and clear, there are very passable woodcuts, and also a quite useful collection of easy questions at the end of each volume.

GEOGRAPHY.

The Foundations of Geography in the Twentieth Century.

By FRANZ SHRADER. (2s. 6d. Clarendon Press.)

The first Herbartson Memorial Lecture, now published in pamphlet form, was delivered at Oxford last November by Prof. Shrader, of the Ecole d'Anthropologie, at Paris. In striking language, Prof. Shrader restated the fundamental ideas of the earth in relation to the sun, planets, and fixed stars. He then considered some material and topographical facts of the structure of our globe and the connexion between Nature and humanity. After referring to the Prussian idea of might instead of right, of *Kultur* instead of education, he urged that the ideal of science must not be force, but harmony, and that geography must add to the whole of the sciences a large contribution to the natural and human harmonization. This well considered statement of geographical aims should be studied by all teachers who wish to inspire their pupils with the broad outlook which is so essential in this subject.

Transport. The Magic Carpet of Industry. By J. P. GRIFFITHS. (2s. 6d. Philip.)

Most boys will find this book full of interest. It is a little difficult to see how it could be used in geography classes, but it would make a fascinating addition to the school library. It describes briefly the history and development of transport by sea, road, canal, and railway; it is well and profusely illustrated; and it deserves a wide circulation.

A Causal Geography of the British Isles. By J. MARTIN. (4s. 6d. Longmans.)

Of the numerous textbooks on the British Isles recently published, this book is, in many respects, the best. It fully meets the requirements of the Matriculation and General School Examinations, and it is eminently suitable for candidates who are preparing for the various Civil Service Examinations. As a practical teacher, Mr. Martin knows not only how to choose his materials, but also how to present his facts in a clear and interesting manner. In the course of each lesson he intersperses questions requiring oral answers, in order to test the intelligence and imagination of the reader. The geographical factors which have influenced the gradual growth and distribution of the industries and population of the country are well brought out, the relation of the economic geography to the physical structure is carefully explained, and many historical events which bear on the subject are referred to. The text is illustrated throughout with excellent pictures and maps, which add greatly to the interest and value of the book. Fig 75, showing the Midland coalfields, is an example of what a sketch map should be. With a little help from the text, a boy could easily read from this map the essential features of one of the most important industrial areas of the country. When revising their lists of textbooks, teachers of geography in secondary schools would do well to consider the merits of this work.

HISTORY.

Guilds in the Middle Ages. By GEORGES RENARD. Translated by D. TERRY and Edited, with an Introduction, by G. D. H. COLE. (2s. 6d. net. Bell.)

The text of this book, translated from the French by a well known writer on economics and economic history, is in the main a sound and serviceable sketch of an important medieval institution. Unfortunately in this edition it has been exploited by its editor to serve the purpose of an anti-political propaganda.

The Sea Commonwealth and Other Papers.

Edited by Dr. A. P. NEWTON. (3s. 6d. net. Dent.)

This little volume contains six lectures delivered in King's College, London, during the autumn of 1917. They treat generally of the relation of Britain to the outer world. Sir Julian Corbett writes of the vital importance of sea-power to the Empire. Prof. Mantoux harmonizes French colonial ambitions with those of Britain. The late Mr. J. E. Mackenzie's contribution describes the formidable menace of Germany's imperial designs. Prof. A. F. Pollard treats with much force and ability the attitude of Britain towards the Monroe doctrine. Sir Harry Johnston deals with the development of Africa, and Mr. Basil Thomson with the problems of the Pacific. All these weighty utterances deserve attention.

Little Books of World History.

(9d. each. McDougall's Educational Co.)

Five volumes of this series lie before us. All are anonymous. They are intended to supplement the ordinary textbooks of insular history by providing sketches of great contemporary world movements. Such movements here depicted are: (1) The Wars of the Cross; (2) the conquests of the Turks in Europe; (3) the fight of Holland and Belgium for freedom in the sixteenth and seventeenth centuries; (4) the careers of Four Dreamers of World-Power—viz. Philip II, Louis XIV, Napoleon, William II; (5) the course of the century before the Great War. The little books are handy, ingenious, and suggestive. Each is extensively illustrated, but too many of the illustrations are valueless efforts of imagination.

Helps for the Students of History. Nos. 7-16.

By VARIOUS AUTHORS. (6d. to 2s. net. S.P.C.K.)

The S.P.C.K., continuing their useful series of "Helps for the Students of History," have issued ten more of their handy pamphlets. We must content ourselves with mentioning their titles. The names of the authors are a sufficient guarantee of excellence. No. 7 deals with the documents in the Public Record Office, Dublin (Dr. R. H. Murray); No. 8 treats of the French Wars of Religion (Mr. A. A. Tilley); Nos. 9-11 give a history of the period of the Congresses from the pen of Sir A. W. Ward, who follows up his narrative by providing in No. 12 an account of attempts to find securities for peace during the subsequent era; No. 13 sketches the French Renaissance (Mr. A. A. Tilley); No. 14 supplies hints on the study of English Economic History (the late Archdeacon Cunningham); No. 15 provides valuable guidance for students of parish history and records (A. H. Thompson); No. 16 furnishes an introduction to the study of Colonial History (Dr. A. P. Newton).

A Short History of the Great World War.

By F. MAYNARD BRIDGE. (6s. net. Deane.)

With commendable enterprise Mr. Bridge, of St. George's School, Windsor Castle, and Messrs. Deane & Sons, of the Year-book Press, have brought out a history of the War on the very morrow of the War's completion. There is, however, nothing hasty in their production. The early sections summarize in a convenient manner the detailed information given in the larger histories; the later chapters, though necessarily less complete, present an adequate sketch of the course of events. Twenty-two maps accompany the text, and there is a vigorous coloured frontispiece by Mr. H. J. Ford, whose skill as a historical artist is well known.

MISCELLANEOUS.

What will My Position Be? By E. H. ALLEN.

(1s. net. Evans.)

It is the duty of every teacher to make himself acquainted with the Pensions Act, and, although we do not think that many teachers will "lose a pension or gratuity through sheer ignorance," Mr. Allen's booklet will fill a gap; it is well arranged, and the catechism at the end will clear away many misunderstandings. On the other hand, references to the sections and sub-sections of the Act and the statutory rules might have been given. In addition to the Act and Rules, many "rulings" have been given on several thorny questions. One of the chief difficulties of the Act is the distinction between recognized and qualifying service, and the book does not make a serious attempt to clarify the situation. Notwithstanding omissions, the booklet will be of great service to teachers who have neither the time nor the inclination to master the intricacies of the Act.

A. & C. BLACK'S HISTORIES.

By **M. W. KEATINGE, M.A., D.Sc.,**
Reader in Education in the University of Oxford.

A FIRST HISTORY OF ENGLAND.

Demy 8vo, cloth, with many illustrations. Price **3s. 6d.**
Or in two half volumes. Price **2s.** each.

This history is suited for boys and girls from nine to twelve. Its main features are the large number of pictures, upon which to a great extent the narrative is based, the attention paid to social and industrial history, exercises on the pictures, and references for the teacher or the pupil to illustrative material for each episode. Summaries are included.

By **M. W. KEATINGE, M.A., D.Sc.,**
Reader in Education in the University of Oxford; and

N. L. FRAZER, M.A.,

Head Master of Ilkley Grammar School.

A HISTORY OF ENGLAND FOR SCHOOLS.

With Documents, Problems, and Exercises. Price **7s. 6d.**; or in Two Parts, **4s.** each.

Part I.—55 B.C. to A.D. 1603. Part II.—A.D. 1603 to Present Day.

The "Documents, Problems, and Exercises" are also published separately under the title of

DOCUMENTS OF BRITISH HISTORY.

By **JOHN FINNEMORE.**

SOCIAL LIFE IN ENGLAND.

Small Crown 8vo. Price **2s. 6d.** each.

Vol. I. From Saxon Times to 1603.

Vol. II. From 1603 to the Present Day.

The aim of this Reader is to give a picture of the life of the people at different periods. It describes how they worked and how they played; how the great man dealt with the small, and how the small man made a living; how the rogues were kept in order, and how justice was done between man and man; what the people ate and wore, and how much they paid for food and clothes; what they got for their labour, and what they did with it. It is suitable for the upper classes of primary schools and the lower and middle forms of secondary schools.

By **H. L. BURROWS, M.A.**

THE STORY OF ENGLISH INDUSTRY AND TRADE.

Containing 36 Illustrations. Price **2s. 6d.**

This book is intended for use as a reader and textbook for the upper classes of primary schools and the lower and middle forms of secondary schools.

By **EUGENE L. HASLUCK, B.A., F.R.Hist.S.**

AN INTRODUCTION TO THE HISTORY OF ENGLAND.

With 15 Sketch Maps. Price **3s. 6d.**

This volume aims at delineating in clear outlines the main threads of our History, and at enabling the student to grasp the essential lines on which England has developed as a State. It is intended as a book for use in the upper forms of schools, and a good knowledge of the contents of this volume should be sufficient for the purpose of the London Matriculation Examination.

4, 5, & 6 Soho Square, London, W. 1.

MUSIC.

Listener's Guide to Music. By PERCY SCHOLES.
(3s. 6d. Oxford University Press.)

Mr. Scholes has succeeded in making a romance out of a textbook. In an admirably written introduction, Sir Henry Hadow draws attention to the aims and purpose of the book, which is written, "not for the students and connoisseurs, but for plain, simple people who like music, but are a little bewildered by its complexity, and by the pace at which it passes across the attention." In a style far removed from that of the ordinary music textbook, the author chats on the essentials of true listening, on how the composer works, on the orderliness in design of a musical work, and initiates the reader into the mysteries of sonata form, the fugue, and so on. Among other interesting features, there is at the end of the book a concert-goer's glossary of terms found in analytical programmes, and an appendix giving hints on the class use of the book.

PEOPLE'S BOOKS SERIES.

Industrial Chemistry. By Dr. CLERK RANKEN.
(1s. 6d. net. Jack.)

A concisely written attempt to show how much our national life is dependent on the chemist and also to provide a corrective to the "series of lamentable blunders" perpetrated by the daily Press in its endeavours to deal with scientific matters. This little volume succeeds in covering a wide field. Fertilizers, metallurgy, oils and fats, the dyeing industry and its ramifications, brewing, incandescent mantles are all brought under review. In spite of the fact that little space can be given to each of these subjects, the author manages to keep well up to date. The fixation of nitrogen, the "hardening" of oils, and the manufacture of artificial silk for examples, are usefully and clearly dealt with.

A History of Greece. By E. FEARENSIDE. (1s. 3d. net. Jack.)

An attempt is made to cover in 120 pages or so the history of Greece from the earliest times to the Battle of Cynoscephalæ, when Rome finally conquered Greece. In order to do this, many aspects of the story have had to be ignored. There is nothing about the achievements of the Greeks in the world of thought; the history dealt with is almost entirely political, but within these limits the story is clearly and simply told.

Emanuel Swedenborg. By L. B. DE BEAUMONT.
(1s. 3d. net. Jack.)

An excellent short account of Swedenborg's life and philosophy. The writer's object seems to be to show that Swedenborg was much more than the mystic he is commonly held to have been. His claims as a man of science and the modernity of his philosophy are insisted upon. Whatever we may think about these views, the book is worth reading, and, better still, thinking about. It is an able introduction to the subject.

Christianity and Christian Science: a Contrast. By
M. CARTA STURGE. (1s. 3d. net. Jack.)

The subjects with which this little book attempts to deal are large and difficult, and they are admittedly treated inadequately. Nevertheless, there is abundant food for thought here. The author does not take up a decisive attitude for or against the claims of Christian Scientists, though he seems inclined to believe that there may be something in them. He has at least produced a readable treatise for busy men.

Vegetable Gardening. By J. S. CHISHOLM. (1s. 3d. net. Jack.)

A little treatise for the allotment-holder or school gardener. Clearly written chapters on Soil Management, Manures and Fertilizers, Rotation, Sowing and Transplanting are followed by explicit directions for the cultivation of each of our common vegetables in succession. The recognition of and treatment for the diseases to which each plant is liable are also adequately considered. The whole forms a complete and trustworthy handbook for the gardener.

SCIENCE.

An Introduction to the Study of Science. By W. P. SMITH
and E. G. JEWETT. (7s. 6d. net. New York: The Macmillan Company.)

Judging from the textbooks of science which reach us from America, teachers in the United States realize more fully than those in this country that the majority of boys and girls discontinue their study of science when they leave the secondary school. American courses of school science are to a large extent complete in themselves and designed mainly to provide such an acquaintance with the principles of science as may reasonably be expected from all educated persons. With us, on the contrary, where school curricula are determined in too large a measure by University Examining Bodies, the courses of physics and chemistry are of a preliminary nature, and intended as an introduction to the academic study of the subjects in college laboratories, the result being that the

majority of our secondary-school pupils complete their education ignorant to a large extent of the industrial and technical applications of the principles of the sciences they are supposed to have studied. The book under consideration illustrates admirably the difference in point of view. The 609 pages of text are divided into fourteen chapters, dealing, among other main subjects, with the weather, fire and heat, refrigeration, artificial lighting, transportation on land and water and in air, building materials, insects and human health, micro-organisms, and the protection of health. From the boy's point of view, every subject is alive; he thinks it well worth while to know how the mechanisms described work, to understand why the health authorities insist on their various compulsory measures, and he is anxious to perform the experiments suggested because their bearing on everyday problems is clear to him. Moreover, the authors show what excellent pegs are provided by this examination of modern appliances on which to hang easy explanations of underlying principles.

We commend the volume to the careful attention of our science masters, as providing not a ready-made course of instruction suitable for immediate adoption in our schools, but a whole series of hints and suggestions of a helpful nature, which will lighten the task of drawing up a scheme of work in science suitable to form part of the general education of all pupils in secondary schools.

Pioneers of Progress—Joseph Priestley. By D. H. PEACOCK.
(2s. net. S.P.C.K.)

This is a capital book to put in the school chemical library along with the Alembic Club Reprints. It is remarkable what a stimulus the description of the life of a great pioneer affords to the young student, and the pity is that so few simply written and cheap biographies of the great chemists are available. It is to be hoped that the present volume will be followed by similar accounts of the careers of Dalton, Cavendish, Boyle, and, of our own time, Ramsay. The present book rather stresses the theological aspect of Priestley's life, and does not emphasize the purely chemical side, but this is probably correct, seeing that essentially Priestley was a politician and a nonconformist. There is, however, an excellent chapter which describes his work on air and combustion, and emphasizes his genius as an experimenter.

Textbook of Physical Chemistry. By A. T. LINCOLN.
(12s. 6d. net. Harrap.)

Prof. Lincoln's handbook is written for the use of classes beginning the subject of physical chemistry. The order of the work follows the logical development of the subject-matter in that the experimental data are first presented with the statement of the laws, then the explanation of the facts by the formulation of the theory. The limitations are then emphasized by the presentation of experimental data which appear to be abnormal, with the subsequent modification of the theory to explain these divergencies, and in some cases to show that current theory is not in accord with fact. The historical aspect of the subject is excellently handled, so that the student gets a clear idea of the chronological sequence of discovery. The subject-matter is presented with the minimum employment of higher mathematics, and those sections in which the calculus is used are so arranged that their omission does not disturb the order of the discussion. A large number of numerical problems is included. The selection of the chief topics has been so arranged as to include not only those of theoretical importance, but also those which have a technical value. The phase rule, in particular, is discussed in some detail, whilst the various theories of solution are handled critically. Colloid chemistry is dealt with to a greater extent than is common in books of this type, and in view of the far-reaching technical importance of this subject the innovation is amply justified. Some of the more important physical properties, however, might well have received a fuller treatment. Altogether the book is to be heartily recommended.

The July number of *Science Progress* is the first of a new volume. It contains several articles of considerable popular interest, besides the usual reviews of new books and the summaries of recent progress in science which advanced workers find so helpful. Messrs. Jörgensen and Stiles continue their account of the scientific aspects of cold storage in an article dealing especially with the preservation of meat at low temperatures. Dr. Winifred Brenchley's essay on "The Uses of Weeds and Wild Plants" is a timely reminder that many of our despised native plants might be turned to useful practical account, and is worth adding to the botanical reference shelves of schools. Mr. T. J. Hill contributes an article on "The Water Economy of Maritime Plants," which shows that current ideas on the ecology of halophytes need revision. He finds that these plants absorb water of varying salinity much more freely than is generally supposed, and that their succulence is not necessarily bound up with reduced transpiration. On the contrary, their rate of transpiration, especially of crimson plants, is

(Continued on page 638.)

surprisingly high. Under the title "Some Palæolithic Problems," Mr. Henry Bury reviews our present knowledge of the succession of the industries of palæolithic man and of their relation to the changes that have occurred in river level. Other interesting features of the issue include an essay by Mr. J. C. Gregory on "The Nature of Number," and one by Mr. W. Stiles on "Agricultural Economics in England and Denmark."

SPANISH.

- (1) *Elementary Spanish Grammar*. By SANIN CANO. (4s. 6d. net. Clarendon Press.) (2) *Primeras Lecciones de Español*. By C. M. DORADO. (4s. net. Ginn.)

(1) These two textbooks offer a great contrast in treatment. Señor Cano is too renowned a scholar to command aught but respect for his writings, but in the present instance we are compelled to ask for whom the grammar is intended. The author seems to have ignored present movements in modern language teaching. There are long vocabularies to each exercise, in some cases half the lesson space being devoted to the list of fresh words, but there does not appear to be any logical development of the exercise material. Each lesson is preceded by treatment of grammatical peculiarities, with copious examples, but the exposition is pedestrian and lacking in interest.

(2) Señora Dorado's elementary treatise is a sheer delight. There is abundant evidence that this is the work of a teacher skilled in dealing with younger pupils. The lessons are varied in matter and form—songs, plays, games, and anecdotes giving an added interest. A class which had used this book for a year with an intelligent teacher would have laid a firm foundation for more advanced work in Spanish. The appearance of the book is up to the usual high standard of Messrs. Ginn.

"Oxford Plain Spanish Texts."—(1) *Poesías Varias de Garcilaso de la Vega*. (2) *Eclogas de Garcilaso de la Vega*. (1s. 6d. net each.)

The two latest volumes in this series show evidences of the scholarly taste of the editor, but we doubt whether the "Eclogas" will find an audience among the English students of Spanish. For the more advanced reader the Spanish edition of Navarro Tomás would be more attractive than these two collections. We would ask Prof. Fitzmaurice Kelly to make his choice of volumes more catholic and less academic. There is a definite demand for plain

texts such as these. But we would suggest editions of the dramatists and novelists rather than further volumes of early poets. By the way, why is the spelling of Garcilaso different here from that in the same editor's "Oxford Book of Spanish Verse"?

A Spanish Reader. By H. C. L. BALSHAW. (3s. 6d. Murray.)

This is a collection of extracts from a wide range of authors, but we should prefer longer pieces so as to keep the attention of the student. There are a few notes and a good vocabulary, but it should be pointed out that *a*, *o*, *u* no longer bear written accents.

- (1) *Amalia*. By JOSÉ MÁRMOL. Edited by A. H. CORLEY. With Notes, Vocabulary, &c. (5s. 6d. net. New York: Macmillan.) (2) *Leyendas Históricas Americanas*. Edited by JAMES BARDEN. (4s. net. New York: Macmillan.)

(1) José Mármol was a political opponent of Rosas, one of the most striking figures in South American history at a time when many were achieving fame in that continent. Rosas ruled the Argentine, then only the province of Buenos Aires, for twenty-four years with such severity as to earn for himself the name of "El Tirano." His dictatorship enabled the country to settle down to progress, but it aroused the enmity of his political antagonists. Of these, Mármol was the most able and the most bitter, and *Amalia* is a picture, partisan naturally, of life in Buenos Aires in the thirties of the last century, which portrays Rosas in the blackest possible light.

(2) Frías, the author of the "Leyendas," is a profound believer in the regeneration of Mexico through the native, and to arouse in the Mexican breast a feeling of pride in his country's story, he has gathered from every available source the materials for building up a great work on the history of the Aztec race. These legends are taken from his work, and are full of interest.

Both volumes are furnished with notes, vocabulary, illustration, and exercise material; but we think that the notes are too elementary for the type of student for whom these books are intended. The get-up of the various volumes in these series is very attractive, but the prices are rather high for textbooks of this kind.

"Problems of Subnormality" (by J. E. Wallace Wallin, 15s. net), reviewed on page 490, is published in this country by Messrs. George G. Harrap & Co., Ltd.

ROWSBY WOOF, Esq.

The Associated Board holds Examinations throughout the United Kingdom, and in the Colonies, in both Theoretical and Practical Music.

The Examinations are as follows:—

- (1) **Local Centre Examinations**, including Intermediate and Advanced Grades, conducted by two Examiners. Theory Examinations are held in March and November at all Centres in Great Britain and Ireland. In Practical Subjects they are held in March-April at all Centres, and in the London district and certain Provincial Centres in November-December as well as in March-April.
Entries for the November-December Examinations close Wednesday, October 15th, 1919.
Full particulars will be found in Syllabus A, which will be sent on application to the Secretary.
- (2) **School Examinations**, including Higher, Lower, Elementary, and Primary Divisions, conducted by one Examiner. Candidates for these Examinations may be entered either by Heads of Schools or by individual Teachers. In the latter case, neither the Teacher nor the Candidate need necessarily be connected with a School.
The School Examinations are held throughout the British Isles at three periods, viz., October-November, March-April, and June-July.
Entries for the October-November Examinations close Wednesday, October 8th, 1919.
Full particulars of the School Examinations, including the **General Inspection of School Music** and the **Class-Singing Examination**, will be found in Syllabus B, which will be sent on application to the Secretary.

These Examinations are of graduated difficulty, so as to provide a complete series of tests from the Primary Division School to the Advanced Grade Local Centre Examination, suited to Candidates of all degrees of proficiency. The subjects for Examination are as follows:—

GRAMMAR OF MUSIC.
RUDIMENTS OF MUSIC.
HARMONY.
COUNTERPOINT.
PIANOFORTE.
ORGAN.
VIOLIN.

VIOLA.
VIOLONCELLO.
DOUBLE BASS.
HARP.
WIND INSTRUMENTS.
SINGING.

The Board offers annually **Six Exhibitions**, tenable for two or three years at the R.A.M. or R.C.M. These Exhibitions are limited to Candidates in the Local Centre Examinations who are under twenty years of age, and who fulfil certain conditions set forth in each Syllabus.

Syllabuses A and B for 1919 or for 1920, Entry Forms, Theory Papers set in previous years, and any further information can be obtained on application to the Secretary, 14 & 15 Bedford Square, London, W.C.1.

College and School Principals requiring fully qualified Drill or Gymnastic Teachers should notify the Hon. Secretary.

Handbook and Syllabus may be obtained of Mr. JOHN M. THOMSON, 10 Dordrecht Road, Acton Vale, W. 3.

THE BERGMAN OSTERBERG PHYSICAL TRAINING COLLEGE, Kingsfield, Dartford Heath, Kent, and the BERGMAN OSTERBERG UNION OF TRAINED GYMNASTIC TEACHERS.

See advertisement on page 643.

TRAINING COLLEGE

FOR

Swedish Remedial Exercises and Massage.

Founder: F. BARRIE LAMBERT, M.B., B.S., D.P.H.

The training is modelled on that obtainable in Sweden, and includes preparation for the examinations of the Incorporated Society of Trained Masseuses, with practical experience at two London Hospitals.

For further particulars apply to the Directors, A. W. BROWN and E. M. HUMBLE, 36 Pembridge Villas, London, W. 11. Tel.: PARK 3945.

PHYSICAL TRAINING COLLEGE,

LOWER REDLAND ROAD,
BRISTOL.

TRAINING in Swedish and

British Gymnastics for public examination. Tennis, Hockey, Cricket under a County player. Swimming, Massage and Remedial Gymnastics under a certificated Masseuse. Anatomy, Physiology, Hygiene.

Dancing, Ballroom and Ballet, Dalcroze Eurhythmics.

Students prepared for the advanced certificate of The English Folk Dance Society.

Residential fees on application to—The Misses JENNINGS, HOLBROW, and COLSON.

For other Physical Training Advertisements see pages 643 and 646.

JOINT SCHOLASTIC AGENCY, LTD.

The object of this Agency is to render assistance at a minimum cost to Masters seeking appointments. *There is no Registration Fee, and the lowest possible charges are made for Commission, which are still further reduced by large discounts—see Rules VII and VIII of Prospectus, which will be sent on application.*

This Agency is under the direction of a Committee representing the following leading Educational Associations:—

Head Masters' Conference; Incorporated Association of Head Masters; College of Preceptors; Teachers' Guild; Incorporated Association of Assistant Masters.

Registrar: Mr. E. A. VIRGO,

9 Brunswick Square, London, W.C.1 (near Russell Square Tube Station and the Foundling Hospital).

Office Hours: 9.30 a.m. to 5 p.m.

Saturdays: 9.30 a.m. to 1 p.m.

The most convenient hours for interviews are from 11.30 a.m. to 1.30 p.m., and from 3.30 p.m. to 4.30 p.m. Appointments should be made when possible.

Telephone: Museum 3247. Telegrams: "Educatorio Grenville London."

Continental Schools

COLLÈGE DE CANNES,
FRANCE (High School for Boys). Fine building; every comfort. Private rooms. Special arrangement for foreigners wishing to speak French fluently. £21. 8s. a term.

DANS très bel immeuble, bien organisé, très bien situé, on reçoit Jeunes Filles pour achever éducation française. Cours faits par Professeurs de l'Etat; régime choisi. Ville située sur grand ligne, Paris-Bordeaux, proximité Royan et plages océan Côte d'Argent. S'adresser pour tous renseignements à Madame LA DIRECTRICE DE L'ÉCOLE PRIMAIRE SUPÉRIEURE DE JEUNES FILLES DE PONS (Charente Inférieure), France.

The Froebel Society & Junior Schools Association.**Autumn Term, 1919.**

Tuesday, Oct. 7th, at 5.30 p.m., College of Preceptors' Hall, Bloomsbury Square. "Artistic Expression." Lecturer: Miss Von Wyss. Chairman: Miss WALMSLEY.

Tuesday, Nov. 4th, at 5.30 p.m., The High School, South Side, Clapham Common, S.W. "Nursery Rhymes, with Musical Illustrations." Lecturer: G. SHAW, Esq. Chairman: J. E. BORLAND, Esq.

Tuesday, Dec. 2nd, at 5.30 p.m., College of Preceptors' Hall, Bloomsbury Square. "Literature." Lecturer: KENNETH RICHMOND, Esq. Chairman: Miss KYLE.

Tickets, 1/- each lecture, can be obtained from the SECRETARY, 4 Bloomsbury Square, W.C.1.

LECTURES ON ART. Single or in Series. London and the provincial capitals. For prospectus and terms address—Miss A. ROBERTSON, 45 Paulton's Square, Chelsea, S.W.3.

EDUCATED GIRLS thoroughly trained for permanent and well paid Secretarial and Journalistic Appointments. Prospectus—Miss IRONSIDE, Training Bureau, 50 Lincoln's Inn Fields, W.C.2.

Speech Training and Elocution.

MISS LAURA SMITHSON,
L.R.A.M. Elocution A., Director of Stratford-on-Avon Shakespeare Festival Summer School of Education. Recommended by Sir Frank Benson, Miss Lilian Baylis, Ben Greet, Esq., William Poel, Esq. Elocution, Voice Production and Dramatic Training. Pupils prepared for L.R.A.M. Elocution Diploma. Schools near London visited. Stammering and other defects of Speech treated. Address—109 Abbey Road Mansions, N.W.8. North Country towns, including Newcastle-on-Tyne (Conservatoire of Music) visited weekly by Miss IVY SMITHSON.

BURLINGTON CORRESPONDENCE COLLEGE.

Principal: Mr. J. CHARLESTON, B.A.
(Honours Oxon. and Lond.).

TUTORS.—The Staff includes Graduates of London, Oxford, Cambridge, and other Universities.

METHOD.—Thoroughly individual system, which ensures the closest attention to the needs of each student.

Rapid preparation for:—

Matriculation,
Intermediate Arts and B.A.,
Intermediate Science and B.Sc. (Theoretical Subjects only),
L.L.A. (St. Andrews),
College of Preceptors' Diplomas.

SINGLE subjects may be taken if desired.

Address—THE SECRETARY,
Burlington Correspondence College,
14 Elsham Road, Kensington, W.14.

GEORGE GILL & SONS, Ltd.

LONDON and the Home Counties. By G. R. GILL, F.R.G.S. Price 6d.

This is a photographic reproduction 10"×13" of a Relief Map. The scale is $4\frac{1}{2}$ miles to the inch. Names of towns and villages are clearly marked, without detracting from the beauty of the Map. The roads, parks, and open spaces are printed in distinctive colours. By the aid of this map a perfect knowledge of the Metropolis and Home Counties may be obtained. A study of the contours clearly shows where the beauty spots near London may be found.

A READER FOR THE LOWER FORMS.**A First School History of England.** By WINIFRED

RADCLIFFE. This is a History of England from the earliest times to the death of Queen Anne. The Author has here adopted a fascinating and interesting method in relating the story of England's history to young children, which, no doubt, will induce in them a desire for a further study of the subject. The book consists of seventy-two stories told day by day, each dealing with some definite period or some particular event, e.g., *Henry VII, the Battle of Crécy, the Bill of Rights, &c.* ... 1 6

The Student's Word Book.

A comprehensive and classified arrangement which excites the curiosity and creates a live interest in the subject 0 6

SCHOLASTIC APPOINTMENTS

University men and women seeking scholastic appointments should apply to

Truman & Knightley SCHOLASTIC AGENTS LTD

who introduce ASSISTANT MASTERS AND MISTRESSES to the majority of the leading Public and Private Schools at home and abroad.

Through this Agency, well educated gentlewomen with Higher Local and other good Certificates, interested in children and in teaching, can find congenial work in good high-class Private Schools, where the hours are not excessive, conditions are pleasant, and the holidays long. Salaries range from £60 to £120 or more per annum, with board and residence, according to age, qualifications, and experience. There are also many vacancies for Student, Junior Mistresses, and House Governesses or Duty Mistresses at salaries of from £30. to £60 per annum with board and residence.

There is a separate department for
LADY MATRONS and HOUSEKEEPERS
for schools.

No charge for registration.

::

Moderate commission.

SCHOOL TRANSFER DEPARTMENT.

Ladies and Gentlemen seeking Partnerships in, or to take over schools of their own, should communicate personally with Mr. TRUMAN, who undertakes all negotiations connected with the Transfer of Schools, and who is in a position to offer assistance and sound advice to purchasers, to whom no charge is made.

Offices: 158-162 OXFORD ST., LONDON, W.1

Telegrams: "TUTORESS, PHONE, LONDON."

Telephone: MUSEUM 1136.

CLASS BOOKS FOR SECONDARY SCHOOLS.

PUBLISHED AT THE

University Tutorial Press.

SCIENCE.

- Botany, Junior.** By FRANCIS CAVERS, D.Sc. 3s. 6d.
"A very excellent volume. Practical to a high degree. The diagrams are very good."—*Schoolmaster*.
- Botany, Senior.** By FRANCIS CAVERS, D.Sc. 5s. 6d.
"Admirably designed to portray the plant as a living entity, to indicate how structure is subservient to function, and to show what conditions and purpose underlie the manifold variations which plants assume."—*Nature*.
- Chemistry, Junior.** By R. H. ADIE, M.A., B.Sc. Second Edition. 3s. 6d.
"The book offers a thoroughly sound course of practical instruction."—*Nature*.
- Chemistry, Senior.** By G. H. BAILEY, D.Sc., Ph.D., and H. W. BAUSOR, M.A. Second Edition. 5s. 6d.
"The ground is well covered on experimental lines."—*Guardian*.
- Chemistry, Senior Practical.** By H. W. BAUSOR, M.A. 3s. 6d. Including preparations, experiments on action of heat, quantitative and qualitative analysis.
- Heat, Junior.** By JOHN SATTERLY, D.Sc., M.A. 2s. 9d.
"A remarkably clear exposition of the main principles of the science, such as is required by elementary students."—*Secondary School Journal*.
- Magnetism and Electricity, Junior.** By R. H. JUDE, D.Sc., M.A., and JOHN SATTERLY, D.Sc., M.A. 3s. 6d.
"Makes a special point of fundamental principles, and is especially adapted to the needs of pupils making a start in the subject."—*Educational Times*.
- Magnetism and Electricity, The School.** By R. H. JUDE, D.Sc., M.A. 4s. 6d.
"From first to last there is an originality of treatment which makes it interesting reading."—*Nature*.
- Science, Junior Experimental.** By W. M. HOOTON, M.A., M.Sc., F.I.C. Chemistry Master at Repton School. 3s. 6d.
"We can recommend the work heartily."—*Secondary Education*.

ENGLISH AND FRENCH.

- English Composition, Junior.** By E. W. EDMUNDS, M.A., B.Sc., Senior Assistant Master at Luton Modern School. 2s.
"This excellent manual makes plain for the young pupil the essentials of good writing. Can be heartily recommended."—*Education*.
- English Composition, Senior Course of.** By E. W. EDMUNDS, M.A., B.Sc. Second Edition. 3s. 6d.
"A very useful book for practical classroom purposes."—*Schoolmaster*.
- English Grammar, Junior.** With Parsing and Analysis. By A. M. WALMSLEY, M.A. Second Edition. 2s.
"The work of a practical teacher who knows the value of compromise between the old and the new methods."—*Journal of the Assistant Masters' Association*.
- English Verse, An Anthology of** (for Use in Schools and Colleges). By A. J. WYATT, M.A., and S. E. GOGGIN, M.A. Second Edition, Revised and Enlarged. 3s. 6d.
"The selections are admirably fitted for the purpose of presenting the course of English verse through the centuries."—*Literary World*.
- French Course, New Junior.** By G. A. ROBERTS, M.A., Head Master, Russell Hill School, Purley. 3s. 6d.
"The book becomes a serious rival to those existing."—*Schoolmaster*.
- French Course, Senior.** By Professor WEEKLEY, M.A., and CLAUDE GILLI, B.A. 4s. 6d.
"A model of clearness and simplicity."—*The Journal of Education*.
- French Essays, Matriculation.** (Free Composition.) By H. J. CHAYTOR, M.A., and Dr. W. G. HARTOG, M.A. 2s.
"A servicable and well-graded book."—*School World*.
- French Reader, New Junior.** By J. P. R. MARICHAL, L. ès L., and L. J. GARDINER, M.A. 2s. 9d.
"Consists of well-chosen literary extracts in French."—*Education*.
- French Reader, Senior.** With Introduction, Notes, and Vocabulary. By R. F. JAMES, B.A. 3s. 6d.
"This is a splendid reader."—*Schoolmaster*.

MATHEMATICS.

- Arithmetic, The Junior.** By R. H. CHOPE, B.A. With or without Answers. Third Edition. 3s. 6d.
"No better arithmetic for school work has come into our hands."—*Educational News*.
- Arithmetic, The School.** By W. P. WORKMAN, M.A., B.Sc. With or without Answers. Second Edition. 4s. 6d.
"The best arithmetic for schools on the market."—*Mathematical Gazette*.
- Algebra, Junior.** By A. G. CRACKNELL, M.A., B.Sc., and AUGUSTUS BARRACLOUGH, M.A. 3s. 6d. With Answers. 4s.
"Maintains a high standard of excellence we are accustomed to expect from so well known a source."—*Journal of the Assistant Masters' Association*.
- Algebra, School (Matriculation Edition).** By A. G. CRACKNELL, M.A., B.Sc. With or without Answers. 5s. 6d.
"As a school text-book this volume has much to recommend it, the examples and test-papers being carefully chosen."—*Mathematical Gazette*.
- Geometry, Preliminary.** By F. ROSENBERG, M.A., B.Sc. With or without Answers. 2s. 9d.
"The author's object is, by blending practical and theoretical work at the outset, to avoid the unattractiveness of the purely theoretical text-book and the tendency to loose reasoning of the practical manual."—*Journal of Education*.
- Geometry, Junior.** By A. G. CRACKNELL, M.A., B.Sc. 3s. 6d.
"A simple treatment of the elements of Geometry."—*Schoolmaster*.
- Geometry, The School.** By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. 5s.
"Combines the theoretical and practical in a most interesting manner, and shows on every page the skill and care with which the material has been put together."—*School World*.
- Mechanics, Junior.** By F. ROSENBERG, M.A., B.Sc. 3s. 6d.
"The book possesses all the good qualities of its fellows."—*Schoolmaster*.

HISTORY AND GEOGRAPHY.

- Geography, Preliminary.** By E. G. HODGKINSON, B.A., F.R.G.S., Assistant Master, Crewe County School. 2s.
"An admirable text-book, clear, direct, and well suited to the needs of pupils for whom it is intended."—*Literary World*.
- Geography, Junior.** By G. C. FRY, M.Sc. 3s. 6d.
"A concise book of geography on modern lines. The diagrams are bold and convey definite visual instruction directly illustrating the text."—*Education*.
- Geography, Text-book of.** By G. C. FRY, M.Sc. Second Edition, Revised and Enlarged. 5s. 6d.
"The compilation is by no means one of mere geographical facts; the 'why' and the 'wherefore' are everywhere in evidence."—*Schoolmaster*.
- History of England, Preliminary.** By M. K. ELLIOTT, Honours in the Historical Tripos, Cambridge, and M. S. ELLIOTT, M.A. With Illustrations. 2s. 9d.
"In addition to an outline of political events it tries to give some idea of social and constitutional development and also to connect history with geography. It is clearly written and well illustrated."—*School World*.
- History of England, School.** By M. E. CARTER, Honour School of Modern History, Oxford. 4s. 6d.
"The essential outlines of the subject are presented in the most easily digestible form."—*Guardian*.
- English History, Groundwork of.** By M. E. CARTER, Honour School of Modern History, Oxford. 2s. 9d.
"A very readable outline of the salient facts of English History. The material is well arranged and the language is simple."—*Educational News*.
- Social History of England, A.** By FREDERICK BRADSHAW, D.Sc., M.A. 5s.
"A book of high authority and serviceableness."—*The Journal of Education*.
- Government of the United Kingdom, its Colonies and Dependencies.** By A. E. HOGAN, LL.D., B.A. Third Edition, Revised and Enlarged. 3s. 6d.
"An elementary account of the British Constitution suitable for upper schools. The account of the present-day institutions of the British Empire is good and clear."—*School World*.

PRIMARY SCHOOL NOTES	708

OCCASIONAL NOTES.

ENGLISH teachers are at present enjoying the rare privilege of literally sitting at the feet of one who has already won her place in the line of the great educational reformers, and many are wondering why it is that Dr. Montessori has won her laurels so rapidly. It is not because there is anything strikingly new in her doctrine. Whoever cares to read Dr. Boyd's "From Locke to Montessori" will be satisfied on that point. Nor is it merely the dramatic demand for perfect freedom for the pupil—a demand, by the way, that Dr. Montessori does not make. Tolstoy's anarchic school had a far better claim to whatever advertisement belongs to complete freedom from restraint than had the "Children's Houses," where personal liberty had always the wholesome curb of having to observe the rights of others. It is probable that one of the prime causes of Dr. Montessori's early recognition by the public is the fact that she is a doctor of medicine and approached her subject from the scientific point of view. It is curious how willing the ordinary lay person is to recognize a "doctor's" opinion as of more value, even in education, than that of an ordinary teacher. Experts in education who are doing their best to conduct their studies on scientific principles are sometimes surprised at the continually repeated statements of Dr. Montessori that her system is based on science, as if the work of her fellow educational experts were based upon something else. All the same, it has to be admitted that she has appealed to the public imagination in a way that the scientific-laboratory educationists have not. In this result the personality of the woman counts for much. Her triumph is to a considerable extent a personal one.

THOSE who have the interests of education at heart will not grudge this triumph. If the public will not listen to those of us who are doing the actual work of education, we ought to rejoice in the success of one who, for whatever reason, is able to catch the ear of the public and to spread sound educational doctrine. We have to remember that Dr. Montessori has all the advantages of an outsider and sees defects that may escape us who are in the arena. In her preference of the term "directress" to that of "teacher" she shows that she has hit upon the important truth that in our schools we lay much too great emphasis on mere teaching. This has escaped the rank and file of our teachers, but has been clearly seen by our leaders. Dr. Sophie Bryant, for example, preached this doctrine before Montessorianism was heard of. On the vexed question of the apparatus of the new system, perhaps the less said the better. It is a source of weakness rather than of strength. One of the most striking results of the historical study of methods is the discovery of the fact that their decay is generally due to the development of rigidity, and that this rigidity generally sets in along the line of apparatus. It is already suggested that one of the main advantages of Dr. Montessori's presence among us is the opportunity she will have of correcting errors that may have crept into Montessorian schools. Here we have the beginnings of rigidity, and we earnestly hope that Dr. Montessori will realize that her power lies not in the letter of her system, but in the magnificent spirit with which she has infused it.

ONE'S first thought on glancing at the report of the Oxford University Extension Summer Meeting is a wonder why half of the lectures should have been delivered. Here are discourses on Whitley Councils, the League of Nations, Industrial Peace, Soviet Government, and other topics which are being discussed every day in the newspapers and magazines. Why should eminent people lecture on them? A moment's consideration, however, shows that it is just because they are talked about so much in the press that these subjects need the lecturer. The press is at once the friend and the enemy of knowledge: the friend because it disseminates information, the enemy because that information is frequently one-sided, nearly always superficial, and generally directed rather to the excitement of feeling than to the discovery of truth. The world in which we live is wrapped in fog. It is the business of the lecturer to clear away the veils woven by party feeling, class prejudices, and racial antipathies, and bring us face to face with the realities of things. He must eschew all sensationalism, and hold in abhorrence that "smartness" which is one of the greatest curses of modern literature and modern speech. It is scarcely too much to say that the lecturer who is reported in the daily press stands condemned—a few eminent names and one or two periodicals being excepted. Great indeed is the function of the spoken word in an educated democracy, where there is a large fraction of the people educated enough to follow an exposition in the living voice, but not sufficiently instructed, or without adequate leisure, to study in books. The ever-increasing flood of conferences, lectures, and meetings are evidence that in the dissemination of ideas the tongue has as great a part to play as the pen. Democracy is in some ways a return to the conditions

of child life. The mass, like children, will listen where they will not read.

THE Circular of the Head Master of Eton, warning parents that for the future the inclusive fees for boys attending the College must, owing to existing financial conditions, be assessed at the higher rate of £200, suggests several interesting reflections. The increased demand on the parental purse seems at first sight in the nature of an educational plunge; nevertheless, it can hardly be regarded as a leap in the dark—for Eton. The average head master of any smaller and less conspicuous school might indeed well pause before he took his courage in both hands and risked thus the popularity of the institution whose destinies he was guiding; but, with an Etonian *clientèle*, it is easy to dare almost anything. The *cachet* of a socially exclusive and historically illustrious name must always attract in spite of, or even perhaps in consequence of, financial obstructions. Nevertheless, Dr. Alington deserves unqualified credit for being the pioneer in adopting a course which less famous schools will doubtless eagerly quote and follow. It is not clear whether the inclusive fee of £200 is really all that the parental exchequer of the Eton boy will be called upon to meet. Though sanatorium charges, subscriptions to games, and extra tuition are included in the total sum, there seems to be no suggestion in the Circular as to any reduction in those sartorial outfits called for by every change in an Eton boy's games-proficiency, which used to provoke parental murmurs at swollen school bills. However this may be, the principle of an inclusive fee is a step in the right direction.

IN the matter of school accounts, the English mind has been proverbially materialistic—a fault not surprising in a nation which has till lately regarded education as a bore rather than as a national asset. The English parent must have something tangible for his money. He has been ready to pay out liberally for consumable articles, but he failed to see value in high tuition fees. This want of mental perspective was encouraged by the fact that the more ancient and historic schools possessed endowments which provided partly for the payment of masters' salaries, while the modern schools, as a rule, enjoyed no such resources. The schoolmaster, therefore, in his prospectus, was led to display the boarding and the tuition fees as two separate items, and all the various expenses, such as laundress, doctor, and other establishment fees were figured in detail—to show value. Another item in the Circular to which public attention might well be directed is the statement "that no addition has been made to masters' salaries since war prices began, but it is clear that this is a possibility which has to be borne in mind." There is something almost pathetic in the gentle tentativeness of this remark, in view of the scandalous under-payment of all sorts and conditions of men engaged in teaching, even though Eton masters are popularly supposed not to be such serious sufferers as those attached to other less known and less happily endowed schools. The style in which it is thrust into the Circular, almost parenthetically, would seem to suggest that here Dr. Alington was not so certain of his ground in his attempt to win parental sympathy on that plea. Perhaps he was afraid lest undue emphasis on this point might open out the vexed question of pensions to non-local and non-State-aided

schools, which, if granted, would involve forcible inclusion of the great public schools in a national system of education, a problem bristling with social difficulties. But that—is another story.

IT is now more than a year since the Reports of the Government Committees on Science and Modern Languages appeared, and teachers may well ask whether anything is likely to come of them. In some quarters the cry is being raised that the Board of Education ought to put the recommendations into effect. With curious inconsistency, teachers are continually invoking the paternal aid of the Board and almost in the same breath crying out for more freedom from governmental regulation. There are many of the Committees' suggestions which we should be very sorry to see the Board attempting to force upon schools. We do not desire that a Government department should dictate the number of hours to be assigned to each subject, or the age at which foreign languages should be begun, or what branches of science should be taught to every child. These and many other matters discussed in the reports are questions for the authorities of individual schools, and not for the Board of Education. Again, one of the most urgent measures needed for the improvement of scientific and modern studies is a large increase in the number of University scholarships connected with those subjects. But this is a question as least as much for Local Authorities and private benefactors as for the Board.

THERE are, however, some recommendations which a central authority might do something to help forward. The most pressing need of the schools is trained teachers, and this is especially the case with modern languages, the teaching of which by modern methods is a highly skilled craft. The training of teachers for secondary schools has hitherto suffered from the fact that no advantage is offered to the trained teacher. The initial salary of the trained man or woman ought to be substantially higher than that of his untrained colleague, and until this principle is generally recognized we see small hope for training. The Board might do something to impress this truth on Local Authorities and governing bodies. The question which perhaps comes next in urgency is that of the pass in external school examinations. The standard of attainment required for a pass needs to be raised, not by making the papers more difficult, but by requiring a higher percentage of marks to be gained. The Board are, we believe, investigating the methods and results of the examinations taken by schools, and we hope they will keep this point in mind. We wonder whether teachers have pressed it upon the Secondary Schools Examinations Council. There are other matters, such as the increase of the language staffs at Universities, and the provision of adequate equipment for scientific work, in which the Board have it in their power to help. Teachers would do well, we think, to select those recommendations which they really feel are urgent, and which they desire to see carried out by a central authority, and press these upon the attention of the Board.

SINCE the time when an inconsiderable Parliamentary Grant was first made to supplement voluntary efforts to provide schools, public expenditure on educa-

The Cost of Education.

tion has been criticized and opposed. At the present juncture, those who would "spare the rate and spoil the child" are, as a matter of course, alarmists. The fact is that, while since 1870 the education of the people has been accepted as a national obligation, it has been the Cinderella of the public services. The voluntary origin of the system established the tradition of rigid economy. Twenty-five years after the Act of 1870 the cost of maintenance for each pupil in average attendance in voluntary schools had only increased from £1. 5s. 6 $\frac{1}{2}$ d. to £1. 18s. 11 $\frac{1}{2}$ d., although in Board schools the average was £2. 10s. 1 $\frac{1}{2}$ d. It is now probably between £5 and £6 a pupil. By an intensive system of production the supply of teachers was maintained without subjecting the occupation of teaching to the competitive forces operating in other employments. Consequently the nation was able to fulfil its educational obligations on the cheap. For some years the supply of intending teachers has shown signs of failing; this is not primarily due, as commonly supposed, to low salaries. It is the result of the abolition of the intensive system of production. The substitution of preparatory education in secondary schools for probation and apprenticeship in the elementary schools was the main cause of the shortage. It not only cut off innumerable sources of supply—for previously every elementary school was potentially an incubator—but the intending teachers in the secondary school rub shoulders with young persons who have other aims and ambitions, and may be easily diverted from their first intention.

IT is not surprising, however, that in addition to those who habitually criticize educational expenditure, there are some thoughtful people who view with misgiving the rapidity of the increase. We were unwise in the policy of excessive parsimony, and it is equally unwise, even in education, to indulge in indiscriminate prodigality. Members of the profession, and the enthusiasts, having wandered long in the wilderness, are entering into the Promised Land. It is natural that they should seek to take advantage of the circumstances in which they find themselves. But it is more than ever necessary to apply the cold steel of common sense to the educational problem confronting the community. Complicated though it is by the abnormal economic conditions, we believe that the claim of the profession to rewards which will compare favourably with other occupations requiring a long period of preparatory training is now admitted. We now have to be careful that, in securing the due recognition—too long deferred—of the claims of qualified teachers, we retain a due sense of proportion as to comparative values in the service of education. We are entirely in sympathy with those who desire equality of opportunity for exceptional ability, but we are unable to see that any useful purpose will be served either to the individual or the community by subsidizing mediocrity. We are of opinion, moreover, that it should be possible to provide such opportunities without increasing expenditure on primary schools to an extent that would have provoked Matthew Arnold to scholarly but emphatic protest.

IN these days it would be well for those in authority to re-read Matthew Arnold's Reports on Elementary Schools. That he would have been lacking in sympathy

Matthew Arnold.

with much that the modern spirit in education appears to represent, does not discredit the sanity of his conclusions. He asked the elementary-school teacher to put before himself, in the utmost simplicity, the problem he has to solve. "He has to instruct children between the ages of four and thirteen—children, too, who have for the most part a singularly narrow range of words and thoughts. He has, so far as secular instruction goes, to give to those children the power of reading, of writing, and (according to the good old phrase) of casting accounts. He has to give them some knowledge of the world in which they find themselves, and of what happens and has happened in it—some knowledge, that is, of the great facts and laws of Nature, some knowledge of geography and of history; above all, of the history of their own country. He has to do as much towards opening their mind, and opening their soul and imagination, as is possible to be done with a number of children of their age and in their state of preparation and home surroundings." Matthew Arnold wrote these words as a preliminary to a protest against what he regarded as unnecessary extravagance on the part of the London School Board in the maintenance of schools, then amounting to the "astounding figure" of 55s. 11d. for each child. He said: "We spend, on the whole, for each child more than France spends for two children, and the London School Board spends for each child more than France spends for three children."

THE Army Education Authorities have recently issued a leaflet on Education in the Regular Army. The Circular points out that educational training is to be regarded, in the future, as a definite part of a soldier's training, and should be accepted by commanding officers as integral and as permanent a part of military work as physical training and musketry. This is all to the good. In the past the Army schoolmaster has been hampered by the fact that many commanding officers were apathetic, to say the least, and regarded education as incidental to training. The leaflet lays stress on the new attitude expected from commanding officers, and deals chiefly with the benefits of the education scheme to the individual soldier, the Army, and eventually the nation. The details and organization are not yet published, so we can make no comment on the proposed curriculum and system of staffing the schools. It is contemplated, however, that the scheme will have three broad divisions: (1) higher, (2) commercial, (3) technical education. The nucleus of the staff must be, of course, the existing Corps of Trained Schoolmasters. This corps, it would appear, will have to be considerably augmented. It is to be hoped that, notwithstanding the cry of economy constantly in the ears of the General Staff at this period, they will press the claims of this very laudable project. The better educated the man, the better soldier he will make during his term in the service; and, when he comes to pass again to civil life, he will be an asset to his employers and a more valuable man to the community than when he left it to commence his military career.

SCHOOL NATURE-STUDY UNION.—A general meeting of the School Nature-Study Union will be held on Saturday, October 11, at 3 p.m., at the London Day Training College, Southampton Row, London, W.C.1. Mr. A. Clutton Brock will give an address on "Animism," and the chair will be taken by Dr. D. H. Scott. Admission is free.

HEALTH OF LONDON SCHOOL CHILDREN.*

THE Report of the School Medical Officer of the London County Council bears on every page evidence of the work and thought which has been necessary not only to produce the document itself, but more particularly to establish and maintain the far-reaching, ever-widening, and efficient machinery of a modern school medical service. That its chief sphere of action and influence is the elementary school is only what is right and to be expected, but to assume that there is little or nothing of interest for the secondary-school teacher is to fall into a grave error.

Systematic medical inspection of all secondary-school pupils, with the accompaniment of treatment and "follow-up" schemes, is not carried out in London, and it may be hoped that such treatment and schemes will never have to be adopted, for parental interest and responsibility will be at a very low ebb when medical inspection alone ceases to be sufficient. But scholarship holders in secondary schools have rightly to pass certain "personal hygiene" tests before being allowed to leave the elementary school for the secondary school.

The points raised in the Report on the question of "personal hygiene" should be read by all teachers. There is much wisdom in the sentence: "An additional advantage (in the use of public baths) over the installation of school baths lies in accustoming the children to the use of the public provision during school life, and the formation of habits which will ensure the fuller use of this provision after leaving school." This attitude towards the use of public baths should be encouraged.

The "grouping" of ailments commonly encountered in school medical inspection reveals the large number of "dental" cases, while a glance at the numbers of those who fail to get the dental treatment recommended further shows that a full realization of the dangers of neglected, defective, or diseased teeth has yet to become general. Here, again, is food for thought. The "elementary school" figures, and the revelations of Army dentists, all go to prove that dental defects are widespread and serious. Much may be done in school, not by trying to introduce more into an already far too overcrowded curriculum, but by personal example and by keen observation of the teeth of the children in class. Again, the career of a dentist for both girls and boys is one that, in view of the enormous amount of work still to be done, offers many attractions, and can safely be added to the list of those that teachers may feel justified in suggesting to parents or pupils in a secondary school.

It would appear that it is being recognized more and more fully that the acuteness or otherwise of the senses has a definite bearing on the mental condition of the child. Many children have heretofore been classed as backward who are only hard of hearing and successful in disguising that defect. Ingenuity in devising occupations and games which reveal acuity of sight, smell, and hearing will be rewarded by discoveries of defects concealed by a sensitive child to its own detriment. Serious investigation along these lines is bound to repay the investigator.

It may be noted with satisfaction that the Board of Education in 1917 included regulations for the organization and supervision of physical training in public elementary schools in the Medical Grant Regulations. There has been a great deficit here for years, and it is hoped that having now officially recognized the impossibility of carrying out adequate physical training unless under medical supervision—and properly qualified medical supervision, too—both the Board of Education and Local Authorities will devote to the development of this great and national work all the care, thought, and money it needs. The secondary-school teacher and child will not then find themselves neglected.

Amid much outcry for open-air schools, the powers of

teachers to take their classes out of doors should be widened, there being no doubt, however, of the value of an outdoor or open-air school where such an institution is practicable. These are but a few of the lessons of the Report, which may be commended to all teachers and other enthusiasts in education.

PERSONAL PARAGRAPHS.

By the death of Mr. George Sharples, Manchester has lost one of her most successful and esteemed schoolmasters. He began his professional career at Bolton, and went to Battersea Training College with a First Class Queen's Scholarship in 1874. Mr. Sharples was second Latin prizeman of his colleges for both years, and on leaving Battersea was appointed head master of All Saints' School, Bolton. Afterwards he successively became Inspector of schools under the Bolton School Board, head master of Spring Grove School, Huddersfield, and head master of Leeds Central Higher Grade School. At Huddersfield he had as assistants Richard Waddington, the children's friend, and Dr. T. J. Macnamara, the present Secretary to the Admiralty. Mr. Sharples went to Manchester in 1888 as head master of the new Board School in Waterloo Road, where he remained until the time of his death. During the early years of his career Mr. Sharples devoted a large part of his time to sports. He played Association football for Lancashire County, 1879-81, and won popularity by his successful captaincy of the Bolton Wanderers' Association team. At Manchester he worked unsparingly in the interests of teachers; he was elected to the Executive of the National Union of Teachers in 1895, and only nine years later he became President of the Union at Portsmouth. He was a member of the Education Committee of the Lancashire County Council, and of several committees attached to the Board of Education. His valuable services rendered to education were recognized when Manchester conferred on him the honorary degree of M.A.

* * *

THE death is announced of the Rev. M. A. Nisbet, Honorary Canon of Canterbury Cathedral. Mr. Nisbet was an old pupil of Cheltenham College and a scholar of Jesus College, Cambridge. Proficient in athletics no less than in scholarship, he captained the College boat and the College cricket eleven. He became curate of Longborough in 1861, Rector of Ringwood, Dover, in 1881, and held the living of Ickham, near Canterbury, from 1897 to the end of 1918. An enthusiast in educational matters, Canon Nisbet was for twenty years Hon. Secretary of the Canterbury Diocesan Education Society. He was Chairman of the Gloucester School Board from 1876 to 1881, and latterly rendered service to education as a member of the Kent County Education Committee.

* * *

By the retirement of Mr. Francis Jones, Manchester is losing the service of another of her famous schoolmasters. Mr. Jones has been a science master at the Manchester Grammar School for almost forty-eight years, and is the author of several well known school texts on chemistry. The governors of the Manchester Grammar School have decided that one of the laboratories in the contemplated new building shall bear his name "in acknowledgment of all the great service he has rendered to the teaching of science, both in the school and far beyond its walls."

* * *

MR. W. T. DANN, History Master at Manchester Grammar School, has been appointed Inspector of the Board of Education in Continuation Schools. Mr. Dann was educated at Eltham College (Blackheath), University College (London), and London Day Training College. He graduated B.A. London, Second Class Hons. Mod. Hist. in 1907, and M.A. Mod. Hist. in 1911. Formerly an assistant master at Kendal Grammar School, he took up his appointment at Manchester in 1911. He has been Commanding Officer of the School

* Report of the School Medical Officer (L.C.C.) for 1918.

O.T.C., and has been actively connected with the Workers' Educational Association and Hon. Secretary of the local branch of the Historical Association.

* * *

ADVOCATES of "co-optation of assistant teachers on the Governing Bodies of Schools" will welcome the announcement that Miss F. A. Thomas, Infant Mistress at the Council Schools, Llandilo, has been appointed a member of the governing body of the Llandilo County Intermediate Schools, Carmarthenshire. Miss Thomas, who has rendered valuable services as V.A.D. during the War, is the first elementary-school teacher in the country to attain such a position.

ONLOOKER.

TOPICS AND EVENTS.

WHITLEY COUNCILS AND THE TEACHING PROFESSION.—The application of the Whitley Report to the Education "Industry" is discussed in a leaflet issued by the Incorporated Association of Assistant Masters in Secondary Schools. The leaflet points out that Whitley Councils differ from advisory or consultative committees, as usually set up by Education Authorities, in that they will be standing Councils meeting regularly, under the direction of officials of their own choice, for the consideration of all questions in which the industry is concerned, whereas advisory and consultative committees have only met in the past on the invitation of the Education Authority. Further, it is contemplated that agreements reached by Whitley Councils should carry with them the same obligation of observance as exists in the case of other agreements between employers' associations and trade unions, an obligation which has certainly not been observed with regard to the opinions and decisions of the existing advisory and consultative committees. There seems no reason to doubt that bodies of the Whitley type could be set up for the education "industry," and, with goodwill on both sides, prove of value to teachers in enabling them to obtain a share of control in the administration of education. Since the representation of particular interests is fundamental in the Whitley Scheme, it is claimed that secondary associations *per se* should be represented on all Whitley Councils for Education, along with organizations representing other teaching interests. The leaflet advocates the formation of a National Council, of which the Teachers Registration Council should form the nucleus, and Local District Councils in direct relation with the National Council. In the Local Councils every type of teacher should be represented, so far as possible, by representatives nominated by the organizations concerned with the interests of the particular type.

JOURNALISM DIPLOMA: COURSES OF THE UNIVERSITY OF LONDON.—Full details of the two-year Journalism Diploma Courses, which the University of London are providing next session for demobilized men and other persons, are now published officially in a "Syllabus and Time-table for the Session of 1919-20, with General Directions and Information for Students." The five colleges of the University—University College, King's College, East London College, Bedford College, the London School of Economics and Political Science—which are conjointly giving effect to the University scheme, are each making a substantial contribution to instruction in the subjects which the scheme prescribes. The student is offered a wide choice of subjects of study. Students will also have the opportunity of attending lectures on matters of current public interest by persons of authority. A distinctive feature of the training will be social meetings of the students, when informal addresses on professional questions will be delivered by prominent journalists. Among those who have already consented to render the scheme this service are Dr. W. L. Courtney, Mr. Robert Donald, Mr. A. G. Gardner, Mr. J. L. Garvin, Mr. C. L. Graves, Sir Owen Seaman, Mr. J. C. Squire, Mr. J. A. Spender, Mr. A. B. Walkley, and Mr. Hartley-Withers. Applications for admission to the courses and all inquiries should be addressed to Mr. V. E. Wall, Organizing Secretary of the Journalism Committee, University of London, South Kensington, S.W.7.

TEACHERS OF COMMERCIAL SUBJECTS.—The College of Preceptors is now offering a course of training specially designed for teachers of commercial subjects. It is to extend over two sessions—that is, from September to June in each of two years. Each session students will attend two courses of twelve lectures—one before, the other after Christmas. The syllabus of the lectures of the first course is issued with the prospectus of the course. The subjects appear thoroughly practical and up-to-date. They are

entitled "Limitations from Within," "Limitations from Without," "The Teacher as Ruler," "The Pupil's Point of View," "Class Instruction," "Distribution of Teacher's Time," "Schemes of Work," "Methodology and its Dangers," "Written Work and Corrections," "The Teacher and the Textbook," "Inspection and its Implications," "The Teachers' Reading." In addition to the lectures, there will be discussions. These will be on the problems of practical teaching, the special difficulties of teachers of commercial subjects and on commercial education in all its aspects. Other features of the course will be visits to classes in which commercial subjects are taught, teaching under supervision, and essays on subjects suggested by all the foregoing. The full course is designed to afford teachers of commercial subjects an opportunity of gaining a training in teaching such as will satisfy the requirements of the Teachers Registration Council. The College of Preceptors, in thus instituting a new course of training, is continuing its work as a pioneer in education outlined by its President, Sir Philip Magnus, at the Commemoration Dinner on June 20.

SUMMER SCHOOL OF ITALIAN.—UNDER the auspices of the Modern Language Association, a Summer School of Italian was held from July 28 to August 16 at Girton College, whose Director of Studies in Modern and Medieval Languages, Miss K. T. Butler, acted as Organizing Secretary. The number of applications so far exceeded expectations that it was impossible to accommodate all would-be members at the College. A hundred were able to live at Girton, and the Secretary found rooms for some forty more in Cambridge. So far as was possible in such a short space of time, the School aimed at giving three weeks of what Prof. Okey in his inaugural lecture termed "intensive culture," not only in the Italian language and literature, but also in the political, economic, and social history of Italy, in her art, her music, and her philosophy. The time-table was so arranged that there were at least three lectures each day, of which two, as a rule, were in Italian. The courses of lectures were "The Growth of Italian Civilization from the Middle Ages to the Renaissance," by Dr. Edmund Gardner; "The Divina Commedia," by Mrs. Paul Chapman; "Lo Svolgimento della Commedia in Italia," by Signorina Gualtieri; and "The Making of the Kingdom of Modern Italy," by Prof. Okey. Apart from the courses, there were daily lectures on literary, artistic, historical, or sociological subjects, a great deal of stress being laid on the Italy of to-day. During the last week Mr. Edward Dent gave a series of lecture concerts on the history of Italian music from 1500 to the present day, with vocal and instrumental illustrations. The lectures formed only half the programme, two to three hours each day being given up to classwork. Practical instruction in phonetics was given by Mr. Noel Armfield, and language classes were held daily. The general conversation throughout the day was largely in Italian, and this, together with the fact that the leading Italian dailies were subscribed to, helped not a little to create an Italian atmosphere. The students were unanimous in their applause of the scope of the programme offered, and went away realizing not only how much they had gained in their mastery of the language itself, but what vistas of knowledge of things Italian had been opened out before them.

THE BOYS' WELFARE ASSOCIATION.—The conditions of modern industry have given rise to great industrial organizations, whereby there is a large aggregation of workers under the same direction, together with an immense equipment of automatic machinery which brings with it an increasing monotony and subdivision of labour. These have made more remote that intimate association of employer and employed which was possible, and often existed in the case of small firms, especially in relation to young persons employed therein, whose wellbeing demands at this crisis serious attention not only from an industrial point of view but also in the vital interests of the nation itself. The exigencies of the War have made manifest the question of the due care of young people, and a Boys' Welfare Association (which should surely include girls also) has been formed which has for its object not only the technical training of the boy, but also his full equipment for the duties of life. The Association has upon its Council the representatives of many influential firms, chiefly, however, of engineers and shipbuilders, whilst the textile and other important industries with their large body of young workers are not included, and there is only a meagre representation of the trade unions and none of the Workers' Educational Association. It seeks to carry out its objects by suggesting the appointment in the case of large firms of a welfare supervisor, whose business it would be to keep in close touch with the boy, who would be responsible for his engagement, and should watch over his progress and advise and encourage him in all efforts having for their aim his physical,

mental, and moral wellbeing. Already in many firms works schools have been set up, and the Education Act of 1918, whenever it is allowed to come into full operation, empowers Local Authorities to establish compulsory continuation schools for young persons within their working hours. These should have the sympathetic co-operation of both employers and workpeople, with a view to courses best adapted to the needs of young workers.

GUILD OF EDUCATION AS NATIONAL SERVICE.—There is evidence in the social world to-day of the country's need of teachers and social workers. The Guild of Education as National Service exists to find men and women willing to prepare themselves to take part in such work. The activities of the Guild, which has been started in the East End and in a rural centre at Kenton, near Harrow, might be described as those of an educational settlement. The students in training, who are educated men and women, are teaching in clubs for adolescent boys and girls. In view of the social problems immediately confronting us there is real need that as much "further education" as possible should be provided by voluntary means. For the further development of the work funds are urgently needed. The Guild was started in 1916 without endowment or capital, and could not have founded the Halsey Training College without some monetary assistance. The College is recognized by the Board of Education. The work has now grown and is at the stage where the need both for permanent endowment and for immediate help in development becomes essential. Funds are required for the general maintenance of the hostels, for further lectureships in the Training College, for equipment for the clubs and classes. There is special need for endowing scholarships for suitable men and women who wish to serve the community in this way, but who, without such assistance, could not afford to take the necessary training. Contributions in support of any of these objects will be gratefully received by Mrs. E. M. White, Organizing Secretary, Guild of Education as National Service, 11 Tavistock Square, W.C.1. It is hoped to raise a fund of £2,000.

CLASSES AND LECTURES FOR TEACHERS.—The London County Council have issued their "Handbook of Classes and Lectures for Teachers" for the session 1919-20. The lectures are available

to all teachers actually employed in teaching within the administrative county of London, irrespective of the particular institution at which they may be engaged. Teachers employed in teaching elsewhere may be admitted where accommodation permits. Some ninety courses of lectures have been arranged in art, domestic subjects, economics, English language and literature, foreign languages and literature, geography, handicraft, history, mathematics, music, pedagogy, phonetics, physical education, science, and miscellaneous subjects. Forms of application and copies of the handbook can be obtained from the Education Officer, L.C.C. Education Offices, Victoria Embankment, London, W.C.2.

BRITISH SCIENCE GUILD.—The ninth number of the *Journal of the British Science Guild* may be obtained—price 6d. per copy, postage 1½d.—on application to the Secretary, British Science Guild, 199 Piccadilly, W.1. The *Journal* contains the Report of the work of the Guild for 1918-19, various Memoranda, and a Report of the Thirteenth Annual Meeting, with addresses by Major-General the Right Hon. J. E. B. Seely, D.S.O., Sir Joseph J. Thomson, O.M., and the Right Hon. Lord Sydenham, G.C.S.I., on "Science and Labour Unrest."

HOLIDAY COURSES FOR MUSIC TEACHERS.—A largely attended holiday course for teachers was held at Streatham Hill High School during the week September 8 to 13. Mr. Stewart Macpherson, in his lectures on "Musical Appreciation," first dealt with the equipment necessary for a modern music teacher, especially the need for aural training and a wide knowledge of the literature of music. In the following lectures he showed the growth of music and its clearly marked periods. Miss Elsie Murray gave six lectures on aural training, dealing broadly with the whole scheme of work suitable for a public school, and illustrating each stage, from kindergarten to upper school, with classes of children. She showed how this scheme began with the use of rhythmic movements and percussion band, and ended with the writing of original four-part harmony. Mr. Frederic Moore gave three very illuminating lectures on the teaching of pianoforte technique, and Dr. Richards gave much valuable help in two lectures on Voice Production and the Singing Class.

LONGMANS, GREEN AND CO., 39 Paternoster Row, London, E.C.4.

A COMMUNITY OF WAR ORPHANS.—We have received further particulars of the work Mr. Norman MacMunn is doing at Tiptree Hall, Essex. There are now nine children being trained, and the experiment is being developed with gratifying success. Mr. MacMunn's desire is to make the community a centre for the study of the spontaneous activities of children, and he makes an earnest appeal for workers of all kinds, voluntary or otherwise, especially to teach cookery, mathematics, and music, and to superintend outdoor pursuits. Mr. MacMunn would be much helped if he could admit a few paying pupils to be trained with the orphans. Full particulars as to the experiment may be obtained from Mr. MacMunn, at Tiptree Hall, Tiptree, Essex.

CAMBRIDGE LOCAL EXAMINATIONS.—The Class Lists of the Cambridge Local Examinations held in July show that the total number of candidates entered was 7,374, exclusive of 1,272 who were examined at colonial centres. 106 candidates were entered for the Higher-school Certificate Examination, which was held for the second time on this occasion; 71 of these were successful. The exhibitions at St. John's College have been awarded to W. A. P. Fisher (Bournemouth School) and H. L. Birbeck (Orme's School, Newcastle-under-Lyme). In the Senior Examination 1,363 boys and 1,702 girls passed, First Class Honours being gained by 142 boys and 44 girls. Exemption from the whole of the Previous Examination was gained by 335 boys and 227 girls. Of the Junior candidates 852 boys and 528 girls satisfied the examiners, 72 boys and 7 girls being placed in the First Class. In the Preliminary Examination 232 boys and 288 girls passed.

EDUCATIONAL GRANTS FOR EX-SERVICE MEN.—Under the Government scheme of financial assistance for the higher education of ex-Service officers and men, the total number of grants awarded by the Board of Education now amounts to 9,500, including 4,000 officers and 5,500 men. The courses in respect of which grants have been awarded include more than 2,500 for engineering and technological subjects, between 800 and 900 for classics, philosophy, and literature, and about 1,200 for pure science and mathematics. Applications are still being received in large numbers, and are being dealt with at the rate of more than a hundred a day.

SALARIES IN ELEMENTARY SCHOOLS.—The first meeting of the Standing Joint Committee representative of Local Education Authorities and of the National Union of Teachers, established for the purpose of considering the salaries of teachers in public elementary schools, was held at the Board of Education on September 12. The Secretary of the Board of Education announced that Mr. Fisher had invited Lord Burnham to act as Chairman of the Committee. After the Chairman had made a short statement, Mr. F. J. Leslie, Hon. Secretary of the Association of Education Committees, and Sir James Yoxall were appointed Joint Honorary Secretaries of the Committee. A general discussion on procedure took place, and subsequently the Committee proceeded to consider the question of minimum commencing salaries.

CORRESPONDENCE.

ARMY SCHOOLMASTERS.

To the Editors of The Journal of Education and School World.

SIRS,—The Corps of Army Schoolmasters understood that Lord Gorell had pledged himself not to rest content until he had improved the status of the Army schoolmaster. The Army schoolmaster, a fully qualified and trained teacher with many years' experience in educating and handling men, is being rapidly superseded by education officers and officer instructors who know little about the work, and in several cases have come to the army schoolmaster to be enlightened on the subject. It is true some of the education officers and officer instructors hold academic qualifications, but the majority do not, and their chief qualification is one month's intensive training at a special class at Oxford. Can these individuals carry out the work as efficiently as experienced teachers? Yet the latter are to go to the wall and submit to being superseded by amateurs. This state of affairs would not be tolerated by the medical or any other profession.

In pre-war days the Army schoolmaster was assisted in the school by school assistants—private soldiers whose educational attainments were those of a Second or First Class Army Certificate, who were given the rank of Lance-Corporal. During the War the

(Continued on page 660.)

Sir JAMES YOXALL writes:

"A new Atlas is badly required. The Maps already issued in this Series seem to me to fulfil the requirement. I am glad to see that they are large enough for exhibition on the blackboards in schools. The teaching of Geography will be much assisted by them."

PART I OF

"The Daily Telegraph"

VICTORY ATLAS

NET each part

and is sure to take its place on its merits as the standard work of the future.

YOU have made history, we have mapped the result in **The Daily Telegraph Victory Atlas**. The war has made the pre-war Atlas a thing of the past and it is now only so many "scraps of paper."

The Daily Telegraph Victory Atlas is the Atlas for the present and the future, produced on new lines for modern purposes. Absolutely Up-to-Date. The decisions of the Peace Conference, as made, will be embodied and issued without delay. This is one of the many advantages in obtaining this work in fortnightly parts.

Each part will contain three large and superbly coloured double-page maps 26 ins. X 20½ ins. The maps are unequalled for clearness, accuracy, and detail. The smallest place can be easily picked out.

The Daily Telegraph Victory Atlas will be the standard work of reference and indispensable in the study, office, class-room and home. It will be completed in about 48 fortnightly parts.

Owing to the immense number of copies printed at a time, the price of each part (containing 3 large maps) will be only 1s. 3d. (that is 5d. each Map). On the completion of the Atlas it will be impossible to sell separately any of the Maps at less than 1s., so that each part which now costs 1s. 3d. will then cost 3s. Another great advantage is thus obtained by purchasing the parts as published.

All interested in the teaching profession are particularly invited to examine Part I. For the purpose of imparting instructions to Scholars this Atlas will be helpful in every way.

ON SALE EVERYWHERE

This Atlas is being produced and published by "GEOGRAPHIA, LTD.," 55 FLEET STREET, E.C.4, under the Editorship of Alexander Gross, F.R.G.S.

G. BELL AND SONS, LTD., York House, Portugal Street, W.C. 2

majority of these men were given the opportunity denied to the schoolmaster, of taking a commission, and many of them now hold appointments as education officers or officer instructors. After a training of two or three years, and one year's probation in a garrison school, an Army schoolmaster is granted the rank of Warrant Officer, Class II, and has to serve in this rank for eight years, when he is promoted to Warrant Officer, Class I, after which there is no further promotion. As a general rule, he is discharged after twenty-one years, without the option of attaining the maximum rate of pension, which is considerably less than that of a civilian teacher, in spite of the many disabilities of the Army master. While the conditions as to rank in the Corps still obtain, yet, under Lord Gorell's scheme, men of the rank of anything from private to Sergeant are being given a month's course of training at Newmarket and promoted to units as W.O.I.'s, but the schoolmaster with two or three years' training still has to wait nine years for that rank.

The qualified Army schoolmaster asks to be granted commissioned status for two main reasons:—(1) It is the only status commensurate with the importance of his profession, years of training, and ability. (2) It will give him security of tenure, and ensure him a retiring allowance equal to that of the civilian teacher, many Army schoolmasters being civilian trained teachers who joined the service on leaving college.

If cost is the main obstacle, then, for the time being, the Army schoolmaster is prepared to accept the commissioned status on his present rate of pay. If the education of the soldier and his child in the future is to be entrusted to novices with a few months' training, it is time Mr. Fisher looked into the matter, and the public inquired as to whether it is getting value for the large expenditure of public money on the new Army Education Scheme.

—Yours faithfully,

ARMY SCHOOLMASTER.

THE NEW TEACHING SERIES IS ONE OF THE FIRST-FRUIITS OF THE NEW RENAISSANCE, AND BREATHES THE INSPIRATION OF THE HOUR'S OCCASION. IT STRIVES TO BUILD UP THE NEW HUMANISM ON THE BASIS OF THE STUDENT'S IMMEDIATE ECONOMIC INTERESTS AND ENVIRONMENT.

Mr. H. G. WELLS writes:

"The Series will be a very valuable addition to our educational resources. The scheme is an excellent one."

Chemistry from the Industrial Standpoint. By P. C. L. THORNE, B.A.

Uses suitable descriptions of chemical operations on a large scale to illustrate general principles and the rough physics of applied chemistry, thus creating a school chemistry closely related to the practical applications of the science. With specially prepared diagrams.

4/6 net. *Early in October.*

The Foundations of Engineering. By W. H. SPIKES, B.A.

The mechanics and heat which constitute the general principles of the science of Engineering are treated with a rare simplicity.

With many new diagrams.

4/6 net. *Early in October.*

The Natural Wealth of Britain. By S. J. DULY, B.A.

Practical Field Geology, and the implications of Geology in Mining and Industry, form the prelude to a detailed treatment of Industrial Geography.

With about 100 illustrations.

6/- net. *November.*

Professor JOHN ADAMS:

"Your Series *exactly* meets the needs of the Educational situation just developing."

Applied Botany. By G. S. M. ELLIS, B.A.

The secrets of plant life, the influence of environment and of man, and the control by man of environment to the advantage of the plant—these are the substance of the volume.

With many illustrations.

4/6 net. *Early in October.*

Citizenship. By F. R. WORTS, M.A.

A search for the roots of Government, both Central and Local, necessarily results in a thorough examination of the problems involved in the rights and duties of citizenship.

4/6 net. *Early in October.*

Mathematics of Business and Commerce. By O. H. COCKS and E. P. GLOVER.

An important feature is that instruction in book-keeping is implicit, the manipulation of figures being always applied to actual book-keeping problems as well as being of the most practical and serviceable character.

With Answers. 4/6 net. *November.*

Write for detailed list of works in active preparation.

PRIZE COMPETITIONS.

THE Prize for the September competition is awarded to "S.C.J.M.," and the second place to "Playshaw."

The winner of the August competition is Dr. R. L. Batterbury, Berkhamsted.

Extract from André Maurel's "Un Mois à Rome."

By "S.C.J.M."

Spring was all around us, amid the myriad marbles: formless fragments which owe their preservation to their antiquity. Edging the flower-beds these stones are set in rows, and the plants caress them as they weave their way in and out among them. Stones jut out from among the flowers, flowers spring up among the stones. It is Nature, touchingly reasserting her power over man's handiwork, and, in the joy of this new life, flowers and stones gleam with a common radiance. Birthwort swings itself rhythmically round shattered shafts. Broken pillars support the delicate convolvulus and bear up its white chalices. Yes, how splendid seem these ruins, thus adorned, worthy in their grandeur of the noblest temple. They borrow the wistaria's immortal glories, and, commingling lives, perpetuate their own. So closely are they intertwined that who can say which brought the other to birth: the capital or the acanthus?—or whether the garland of oak leaves would fain become carnation, or the virginia creeper trace out the frieze—which it is that aspires to die in beauty to be born again in sweetness. But, no, it is indeed the stone that lives again.

A great quadrilateral of bare sarcophagi, stripped of their bas-reliefs, marks out the flower-beds at the end of a wide alley. See how they overflow with roses! Born in coffins, roses go climbing and spreading endlessly, passing from tomb to tomb, for ever stretching out their arm-like branches which run from sepulchre to sepulchre, making very death break into smiles. The beauty of this chain, of these chains of flowers linking up and springing out from the marble, is beyond words. Even in the Forum the wonder of the wistaria and the laurels among the scattered marbles carries one out of oneself. Poor Forum—well-meaning, but, before everything, calculating. Here there is no need to be careful lest too much be hid. Beauty can only be in common here; the splendour is the splendour of the whole. Surely Death thus adorned would be beautiful and blessed!

The extract from André Maurel's book on Rome was apparently thought difficult, for it did not bring a very large number of translators into the field. The concluding sentences are certainly a little obscure. The meaning is that the flowers in the Forum are not so

FORD, 36 Irving Road, Bournemouth.**

WM. HUNT'S OXFORD "IDEAL" LOOSE-LEAF EXERCISE BOOK.

(Patent.)

WM. HUNT'S Patent "Ideal" LOOSE-LEAF NOTE-BOOK constitutes the best and most convenient Higher Form and Science Class Exercise Book, Lecture Note Book, Loose-Leaf Scrap Book, Storage Covers for Notes, Letters and Papers of all sorts yet invented. The Book opens perfectly flat for writing, and binds up absolutely securely; can be un-made and re-made and the leaves transferred from one book to another or new leaves added in any manner without trouble and without risk of disarrangement or loss. No rings, posts, arches, or mechanism of any sort. Only one book necessary for many subjects, (each subject can be transferred to its own distinctive cover as convenient). 18 sizes and several qualities. Capacity one leaf or 300 with no lost bulk. "IDEAL" for preserving NOTES OF LECTURES and other matter in convenient and easily accessible form.

Showing the Book containing 300 sheets of paper closed. The Divisible Lace is here shown joined, by inserting the Pointed Tag into the Barrel Tag: When the Book is in use the Lace should be joined as above only. When not in use the lace ends may be tied in a bow knot.

Showing the manner of changing leaves. A leaf is shown withdrawn from one Divisible Lace before withdrawing it from the other.

PRICE LIST AND TERMS ON APPLICATION.

WILLIAM HUNT,

Manufacturing Academical Stationer,

18 Broad St. (opposite Balliol College), OXFORD.

Works: 11 ST. ALDATE'S.

profuse but that they suggest that the Forum does not wish to hide its ruins, whereas in the baths of Diocletian the stones are so over-run with blossom that the two seem blended into one indivisible mass of beauty and glory, and there is no rivalry between them. The names of the plants, too, appear to have troubled a good many competitors. The prize-winner has them right, except *liane*, which is a generic name for the climbing plants of American forests, and is best translated "creepers." We confess to being ignorant of what exactly "aristolochia" or "birthwort" is, and we should have omitted the sentence in which it occurs could it have been done without injury to the passage. "Chalices" is a little inaccurate; "calice," the ecclesiastical term, is not the same word as "calice," the botanical term. Translate "flower-cups" or "cups." For "swings itself rhythmically," we would suggest "weaves a dance" or "dance," and for "linking up," which is a little colloquial, "binding together." *Reliefs* is "reliefs" or "alto-reliefs."

We classify the 46 versions received as follows:—

Class I.—S.C.J.M., Playshaw, Somewhen, F.H.G., Bésigue, E.A.N., Mors Janua Vitae, Priscilla, Borealis.

Class II.—Calvus, Jolande, Damaris, Bobby, Chymyny, Haraldo, Serbia, Bohemond, Menevia, Hesperus, Mamble, Esse quam videri, W.W.M., Chingleput, Dane, Candidus, Rusty, Alsager, Amba, Desper.

Class III.—P.H., Eugène, Sidgwick, Nautilus, Bladud, E.A.P., Novice, Patsy, Sirach, Tom Turk, H.M., Kooka, Hibernia.

Class IV.—Isis, M.D., E.S., D.I.M.

A Prize of Two Guineas is offered for the best translation of the following extract from Michelet's description of a meeting of the Cordeliers' club in his "Histoire de la Révolution française":—

Qu'est-ce qui préside là-bas? ma foi, l'épouvante elle-même... Terrible figure que ce Danton! un cyclope? un dieu d'en bas?... Ce visage effroyablement brouillé de petite vérole, avec ses petits yeux obscurs, a l'air d'un ténébreux volcan... Non, ce n'est pas là un homme, c'est l'élément même du trouble; l'ivresse et le vertige

y planent, la fatalité... Sombre génie, tu me fais peur! dois-tu sauver, perdre la France?

Voyez, il a tordu sa bouche; toutes les vitres ont frémi.

"La parole est à Marat!"

Quoi! c'est là Marat? cette chose jaune, verte d'habits, ces yeux gris jaunes, si saillants... C'est au genre batrachien qu'elle appartient à coup sûr, plutôt qu'à l'espèce humaine. De quel marais nous arrive cette choquante créature?

Ses yeux pourtant sont plutôt doux. Leur brillant, leur transparence, l'étrange façon dont ils errent, regardant sans regarder, feraient croire qu'il y a là un visionnaire, à la fois charlatan et dupe, s'attribuant la seconde vue, un prophète de carrefour, vaniteux, surtout crédule, croyant tout, croyant surtout ses propres mensonges, toutes les fictions involontaires auxquels le porte sans cesse l'esprit d'exagération. Ses habitudes d'empirique, la circonstance surtout d'avoir vendu sur la place, lui donnent ce tour d'esprit. Le *crescendo* sera terrible; il faut qu'il trouve, ou qu'il invente, que de sa cave il puisse crier un miracle au moins par jour, qu'il mène ses abonnés tremblants de trahisons en trahisons, de découvertes en découvertes, d'épouvante en épouvante.

Il remercie l'assemblée.

Puis, sa figure s'illumine. Grande, terrible trahison! nouveau complot découvert... Voyez, comme il est heureux de frémir et de faire frémir... Voyez, comme la vaniteuse et crédule créature s'est transfigurée!... Sa peau jaune luit de sueur.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than ONCE during a given year, though the name of the competitor gaining the first place will be published each month.

All competitions must reach the Office by the first post on October 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C. 4.

PRELIMINARY EDUCATION OF MEDICAL STUDENTS.

By C. E. L. LIVESEY, Bootham School, York.

A STATUTORY body known as the General Medical Council regulates the conditions with which all who wish to enter the medical profession in this country must comply. This is as it should be in a learned profession, and if we draw issue with the General Medical Council it is when they step beyond their terms of reference, and encroach on fields wherein they are not specialists. Having formulated their scheme and indicated their standard, the General Medical Council then leave the details and applications to the various medical examining bodies and Universities, sanctioning their schemes and accepting their verdicts.

Registration by the General Medical Council is essential to power to practise in the profession, but this must not be confused with student-registration—i.e. before the entry on the professional studies. After the degree or diploma is obtained, the General Medical Council are bound to admit such properly qualified men to their Register.

Student-registration is required by some of the Licensing Bodies, but not by all—e.g., the Universities of Oxford, Cambridge, and London, and the Conjoint Board of England.

The General Medical Council require, in the first place, evidence of a certain standard of general education, and for this purpose a number of examinations have been accepted in the past with certain attached conditions. The General Medical Council claim, through their Education Committee, that the preliminary education of a medical student must be "one, up to the age of sixteen, which will form a suitable basis for his future work." Are the foundations for this profession, then, so entirely different from those required for other professions, and is their later claim, that "the pupil should be taught to think," based on the assumption of this faculty as a non-essential in other professions?

The General Medical Council, in their attempt to come into line with other professional bodies seeking to simplify the entrance examinations, adopted the recommendation of their Education Committee in November last, "that the certificate of the 'First Schools' Examination' of the Education Board of England be accepted as affording sufficient evidence that the holder has fulfilled the educational condition required of candidates for admission to its Register of Medical Students, provided that the subjects of English and mathematics have been passed 'with credit.'" With this decision we do not cavil, except in so far as it omits any demand that some evidence should be shown that "the candidate has received instruction in natural science, the bedrock of his future vocation."* For this purpose, at least, science should be in a separate group from mathematics, and a pass should be demanded.

When we come to the next stage in the career of the medical student—his preliminary sciences—we are at once thrown into the cauldron of seething dispute. Where can these preliminary sciences be taught with the best results?

One section claims that the teaching of the preliminary sciences ought, from the outset of and throughout the courses, to be directed with special regard to their applications to medicine and surgery, and that this teaching cannot be given at the public schools. The claim is further laid that a boy should leave school at the age of sixteen, immediately after passing the First Schools' Examination or its equivalent, and proceed direct to his vocational studies at the University, hospital school, or some technical institution.

To this latter contention we emphatically demur, merely affirming for the moment that the last two years—sixteen to eighteen—of a boy's life at school tend, far more than if he were drafted prematurely into University or hospital school life, towards the formation of "a man of high character, able and willing to maintain the true dignity of a great profession, and to live up to the high ethical traditions of medicine; of good general education, of interest, activity, and some *savoir faire*. . . ."

Can this atmosphere of public-school life, duties, and responsibilities, together with hours spent in the reading of classical literature beyond those spent in scientific studies, be compared with the unguided and unguarded leisure-time of a student at a hospital school or a technical institution, say, in London?

This aspect of the question scarcely seems to need expansion, so we return to the former contention and would urge, at once, in the terms of Sir J. J. Thomson's Report, "that after the conclusion of the general course, physics, chemistry, and some systematic instruction in the nature of plant and animal life should form a serious part of the school curriculum of all candidates for the medical profession. We do not think it advisable that such pupils should be put into a class by themselves, as we believe that it would be possible so to improve the teaching of natural science in the last two years at a secondary school that candidates for the medical profession would enter on their vocational studies vastly better equipped than they are at present."

In our public-school training we claim to fit the boy for his after-life rather than his after-work, by teaching him to think by the inculcation in him of the love of thinking; we teach him how to draw aside the curtain of life so that he may not only inquire of Nature her secrets, but learn for himself how to find the answer. We ask that he be taught the beauties of language and of literature, steeped, if you like, in classic literature, but spared the intolerable grind and anguish of "mental gymnastics"; so will he reap the benefit in hours of quiet mental enjoyment and recuperation in later years, having created individuality as opposed to type, a right philosophy of life as against high but barren achievement.

* Sir J. J. Thomson's Report on "The Position of Natural Science in the Educational System of Great Britain." 1918. H.M. Stationery Office. Cd. 9011. 9d.

† "Some Notes on Medical Education," by Sir George Newman. 1918. H.M. Stationery Office. Cd. 9124. 9d.

It was suggested some little time ago by an eminent member of the medical profession that the time spent in studying botany, zoology, and chemistry might be considerably reduced by eliminating much that is not required in the future profession of the ordinary general practitioner.

Views such as this are based on a misconception of what is the teaching of these subjects in our schools to-day. Science, as taught in our schools to-day, is no longer a mere feat of memory, a string of facts relieved by a few startling experiments—it is no longer taught simply because it conveys useful information, cultivates observation, and reason, but because it familiarizes one with scientific method, the one method of approaching the truth by personal effort; it is connected with its principles and philosophy, its aims and methods, its history, literature and personnel: it is given a vitalizing touch, and all this in addition to its technicalities and applications.

Boys are brought quite early in their studies to the limits of knowledge and to the realities of their studies, thus developing at once their imagination and their inventive capacity or creative instinct.

Thus a boy in the higher forms of our schools learns to read the process of the evolution of science through the ages, becomes acquainted with, and accustomed to study critically, some of the writings and works of those who have built up the structure known as natural philosophy: his mind becomes critical, suggestive, eager after truth.

Can more than this be claimed for the methods and aims in schools and institutions which give a medical bias to the study of the preliminary sciences?

We claim that this is the natural function and work of our secondary schools to-day, and not solely of the Universities, hospital schools, polytechnics, and other technical institutions, and would urge that it become a definite policy to include these preliminary sciences in the pre-professional studies for medicine, and thus release time for the medical student to carry these subjects further, with special reference to bio-chemistry and such essentially medical applications of pure science.

The Royal Commission on University Education in London reported in 1913 that "the study of the preliminary sciences should not be included in the medical curriculum; that the undergraduates should not be admitted to the Faculty of Medicine in the University until they have received thorough instruction in the principles of pure science; and that, wherever it is possible, the best time and place for this instruction is the last two years of a good secondary-school course."*

The Regius Professor of Physic at Cambridge has stated that a considerable rise of standard had occurred since the medical student had been allowed to enter for the first professional examination immediately on going into residence.

Dr. Norman Moore, who, as an Inspector for the Con-joint Board of the Royal Colleges of Physicians and Surgeons, has visited a large number of schools, says that "chemistry, physics, and biology should be included in the secondary course taken by pupils intending to enter the medical profession; if a boy left school ignorant of the basic sciences, he could not find sufficient time to learn them thoroughly within the crowded curriculum of a medical student."

Sir George Newman closes his Report on this subject by four conclusions, of which the first is:

That the foundations of chemistry, physics, and biology for the medical student should be laid in the secondary school in a thorough grounding in inorganic chemistry, in mechanics and elementary physics, and in Nature study and botany . . . making it unnecessary for the student to devote any time at the medical school to the preliminary study of these basic sciences. In this way it will be possible both to unload the medical curriculum and yet give the student a better start than formerly.

Strong as this evidence is, we do not hide from ourselves the fact that there is a considerable opposition to these

* Final Report of Royal Commission on University Education in London, 1913.

views, but we assert that in our schools at the present time there is a persistent effort being made to pass into the medical profession a body of students who have formed the research type of mind, and have learned to practise individuality of thought, precision of expression, accuracy in observation and experiment, faculties developed under the close personal contact, guidance and encouragement of the school staff.

There is little space left for one other subject—the examinations. Here one is tempted to follow Frederic Harrison's lament: "wipe it out, and let us begin it all afresh," but as this is impossible one must follow the slow process of evolution in place of the rapid changes of revolution.

The earliest examinations must differ from the later in that the later examinations must be a definite test of a definite content of knowledge necessary for the practice of a specific profession.

Quoting Sir George Newman once more:

Their (examinations) influence is omnipresent and not seldom dominant; and in many cases they prescribe, restrict, and even nullify the course of education, bringing in their train all the pernicious influences and evils of the cramming system. . . . The vital and ultimate issue is not, Has this man passed such and such tests? but Is this man a competent and well trained practitioner? . . . It may well be that . . . a test, instead of being momentary, unequal, and hazardous, should be prolonged, equitable, and relatively certain in its application—a test comprising as its chief factor the whole training and record of the student throughout his course, the form and content of the curriculum, the work done, the preparations made, &c. . . . Such a test conducted by his teachers and an external assessor would alter the whole outlook of the student. . . .

In all examinations we would urge one thing more at whatever cost, the inclusion of school records alongside standardized examinations, and, wherever possible, personal interviews and reviews of the candidate and his school work by living examiners, not dead pedants—human beings, not fossils.

EDUCATION AT THE BRITISH ASSOCIATION.

UNDER the presidency of Sir Napier Shaw, the Educational Science Section at the Bournemouth meeting of the British Association, on September 9 to 13, rose to the level of its opportunities, and the measure of its success was indicated by the crowded meetings, the excellence of the papers read, the valuable discussions that followed, and the support accorded by the press.

The presidential address on "Educational Ideals and the Ancient Universities" dealt mainly with two outstanding demands in education at the present time: (1) a spirit of self-sacrifice in all affairs of educational life; (2) a simplification of the relationship between the older Universities and their constituent colleges.

Life, the President said, is based on sacrifice for some ideal of duty; there will be no reconstruction, and there can be no wholesome life for us or for anybody else, without the spirit of self-sacrifice. The preponderant influence of the older Universities on the character and success of the whole educational organization in the country makes it imperative that their ideals should be well defined and representative of the highest national aspirations. Owing to the complex and indeterminate nature of the relationship between the various authorities in these Universities, there is no recognized body, council, or committee that can be held responsible for, or that could claim to define the ideals which one may say should be the beacon lights for education throughout the country. There is no means of fixing corporate responsibility, and a perplexing veil of incomprehensibility shuts out all those who want things done in education, but who do not know the technicalities of the institutions. The crux of the problem lies in the independence of some twenty colleges which are separate corporate

educational institutions, and quite distinct from, although forming part of, the University—itself a corporate entity—the latter constrained by statutes and traditions handed down by our forefathers to look on in comparative impotence while their ideals are distorted or concealed by the interplay of the interests of the many corporations of which they are composed. This may be a small matter from some points of view, but it is that which prevents our great Universities from taking a leading part in exemplifying the ideals of a co-ordinated national system of education, and makes the success or failure of those great institutions something of the nature of a lottery.

Sir Quiller-Couch's paper on "The Teaching of English" was a powerful plea for a liberal education with English as its basis. He claimed that every man speaks and writes best in the language in which he thinks, and therefore for an English-speaking child English should never be taught as a special subject; and, being the natural medium of our children's thought, it ought to be the basis of every subject of instruction. We ought to demand of the plainest, most everyday speech that it be clear, expressive, accurate, graceful when possible, and at any rate decent, real English, not jargon. Considered thus, he did not think English adequately taught in our schools and Universities, and believed the obstacle to reform is the time-table. A quite inordinate amount of time is spent on two subjects of learning—mathematics and linguistics—since they are ancillary to the other three—literature, history, and natural science; the former two are abstract studies lacking the content of the latter, and employing terms alien to a child's thought. Until a child reaches the age of fourteen or fifteen, let him practise the language natural to his mind, and *one* other; practise English so that it be equally serviceable whether he specialize in literature, history, natural science, or aught else, practice reading, silent reading as well as reading aloud.

The gravest difficulty would be to find capable teachers. With few exceptions, they would never be found in narrow professional training colleges. Either send the prospective teachers to a genuine University, to rub minds with other youths destined for other walks in life, or so raise the salaries of our actual teachers that it will be worth a parent's while to invest on a child for a University degree even as he invests to get him qualified for Medicine or the Bar.

Mr. W. D. Eggar, in a paper on "The Teaching of English in relation to that of Science," claimed that the subject is as much the business of the science master as that of any other master, and in a way more so, as he is concerned with the live end of the language. He strongly urged reform in the curriculum of preparatory schools, in which a broader and more intelligent study of English should take the place of much of the mathematical and linguistic work. An interesting discussion followed, and clearly proved how widespread was the belief in the need for better and more intelligent teaching of English.

In opening a discussion on "Method and Substance of Science Teaching," Prof. H. E. Armstrong thought the Report on the Position of Natural Science in the Educational System of Great Britain had failed to impress anyone; it merely proved the necessity of the reconstruction of the Board of Education. The one feature of distinction in the Report was the recommendation that the basis of instruction should be broadened. The present neglect of geology was disgraceful in view of its importance in agriculture; the neglect of biology was suicidal. The method of science, the scientific outlook must be acquired if scientific knowledge was to be of any avail. A complete change of methods could alone give the opportunity required; the watertight compartments of subjects must be broken down and joined up afresh.

Sir Richard Gregory thought that science teaching in general is too narrow; there is insufficient attention to the broader aspects of natural knowledge and to scientific discovery and inventions as human achievements, and a failure to connect school work with the big applications of science by which mankind is continually benefiting. The substance of instruction has suffered from concentration upon method.

While strongly advocating the method of experimental inquiry and laboratory training, which would aim at training students to use it, he suggested that there should be also a broad general course of descriptive lessons and reading quite independently of the practical work.

In the discussion that followed, Dr. E. H. Griffiths hesitated to accept this divorce of lecture and laboratory work as sound or expedient.

Mr. Mangham asked for a closer co-operation between the lecturers in various branches of science at the Universities, and that the first year's physics and chemistry courses should include subjects of biological and technological importance.

Dr. Lilian Clark proved from statistics how science in girls' schools was being starved for want of time—two hours and less were given to science, whereas Sir J. J. Thomson's report recommended not less than one-eighth or one-seventh of the school time.

Miss Shove strongly urged the necessity of a thorough course in elementary chemistry and physics preliminary to a course in botany.

An afternoon was spent in a joint session with Section F (Economic Science) upon "Business in relation to Education."

Sir Herbert E. Morgan pointed out in his paper the real need of the country for educated men in directing business affairs—men educated in the right way, with technical training added to sound general knowledge and broad views.

Mr. C. R. Fay emphasized the value of University influence in commerce, labour, schools, and State, and claimed that a central school at the University for training men in all branches of economic science would co-ordinate effort and effect a rapid diffusion of new methods.

Mr. H. N. Sullivan thought young men entered business too early.

Prof. Oldham described the success of a Faculty of Commerce in Dublin University.

Sir Hugh Bell spoke of the good results following the appointment of University men, but said there were drawbacks because other men objected to their promotion being stopped in this manner.

The problems of "Continuation Schools" were dealt with by Sir Robert Blair, who, speaking from the point of view of the largest urban district, stated some conclusions in the form of desiderata—viz., (1) For the first two years (fourteen to sixteen) the education should, as a rule, be "general," and the second two (sixteen to eighteen) may have a bias—technical or commercial derived from the occupation. (2) Residence is the basis of obligation on the Authority. (3) The required eight hours per week may, as a rule, be most appropriately taken in two four-hour periods. (4) All subjects may be taught in one school, but not necessarily to all pupils. (5) It would be inadvisable, as a rule, to divide the four-year period between two schools—one from fourteen to sixteen, the other from sixteen to eighteen. (6) Schools may be mixed or separate in respect of the sexes. If mixed they should be really mixed, and not dual. (7) In the rural districts, and perhaps in some cases in urban areas, they may be "seasonal." (8) Continuation schools will be ends in themselves, but some boys and girls will use them as "stepping stones" to higher things. Interest is the key to the problem of instruction. The schools will be what the staff makes them—environment suggests numerous avenues to heart and mind. Interest is our means, and saving the world from materialism our objective. The direct work of the classroom is only the first line of operations; the extra classroom activities are no less important—libraries, clubs, games, and societies will attract the adolescent.

Mr. A. P. M. Fleming followed with a paper on "Works Schools." He showed that by the Act of 1918 the scope of these schools will be much extended, and, properly conducted, will have many educational advantages—e.g. close correlation between school work and the practical training in the works, effective introduction into the classroom of the spirit required in continuation-school teaching, developments in industry greatly facilitated (such as the selection for em-

ployment and promotion of workers, their systematic training more easily undertaken, harmonious relations between the management and workers ensured), while the training in practice of civic and economic principles will enable the worker to appreciate his share in the responsibilities of industrial life.

Mr. G. F. Daniell dealt with the problem in the rural schools, and showed that facilities for transport would have to be provided. He suggested that relations with village clubs and institutes should be close, and that local considerations should determine whether school one day a week for forty weeks in the year or a seasonal arrangement of attendance is preferable.

Mr. C. A. Buckmaster, referring to urban schools, said that the content of the curriculum was of secondary importance compared with the training of character. The teacher must have the greatest amount of liberty and provision made for the development of school societies and games.

Mr. J. S. Rainer presented the W.E.A. point of view: that, for efficiency and success, it is desirable for the school to be entirely independent of the "works." Employers should be represented on Advisory Committees, but not in control. It would be advisable to retain and absorb the works schools already established into the general system, distrust of the employing interest, as being almost entirely personal and mercenary, would prevent such schools from giving suitable and adequate education as provided for under the Act. Classes should not exceed twenty-five, provision should be made for medical and dental treatment, adequate provision be made for physical training, and the subjects of study be related to the interests of the pupils, and not determined merely by the needs of trades and industries.

Lord Malmesbury would gradually eliminate those unable to profit by the education provided by public funds, but would encourage and spend as much as possible on the best boys and girls.

Principal Maxwell Garnett urged that works schools should be encouraged under a system of inspection by large rather than by small Local Education Authorities.

Dr. Vincent Naser, of Copenhagen, submitted proposals for an "exchange of students" between Denmark and Great Britain, and suggested the formation of bureaux of international information in connexion with Universities.

Sir Richard Gregory spoke on the educational value of the cinema—not to make learning easy, but to awaken interest and assist imagination. A demonstration of what can be done in this direction was given by the Community Picture Bureau.

An interesting discussion on "Training in Citizenship" was opened by Bishop Welldon, who said something must be done through co-operation or co-partnership to create a fellow feeling between Capital and Labour. He hoped the schools would teach an enlightened patriotism, and that the children should be made to understand the dignity as well as the history of the Empire. Civic dignity was the lesson to be taught in the interest of citizenship.

General Sir Robert Baden-Powell followed with an eloquent appeal for the need of out-of-school training and environment as auxiliary to education for producing efficient and human citizens—applied to girls equally with boys. The method of training should be through active desire to learn from within rather than from passive reception of ideas from without. Scouting affords such a training: individuality is developed and harnessed for the betterment of the community. The wonderful success of the Boy Scout movement suggests that the most important duty of the schoolmaster is to discover what particular portion of his environment appeals most to each of his pupils, and to use that as the medium for inducing mental activity.

Miss E. P. Hughes spoke on the need of teaching citizenship, especially to girls, and Lady Shaw urged the necessity of selecting teachers not merely for their academic qualifications, but for their character.

In a valuable paper on "Fundamental Principles in Education," Prof. A. N. Whitehead based his argument on the dictum—all education is the development of genius; that the three factors of genius are the habit of action, the vivid

imagination and the discipline of judgment; that the function of criticism is the education of genius by the aid of knowledge. Knowledge and genius are the twin factors of effective personality; the true ultimate problem before the educator is how to impart knowledge so as to stimulate genius. A curriculum should start with obvious relevancy and progressively widen as the field of relevancy expands. Language is essential, its study has importance, relevancy, and the certainty of a large measure of success. You can only spoil its effect by one procedure, namely, by teaching a language which pupils can never acquire, will never want to use, and which is the vehicle of a literature whose relevancy is only immediately obvious to a mature mind. You must not go on to a dead language until a modern literature has gripped the imagination. Classical learning is the superstructure of a literary education, but not the foundation. Our literary education is blighted by the dead hand of Archæology.

Mr. F. S. Preston submitted a paper in which he emphasized the value of literary studies in the development of imagination and moral faculties. The highest education is the association with great minds, and possible for all through the medium of Literature and Art.

Prof. Marcus Hartog in a paper on the "Function of Examinations in Education" claimed that to the pupil examinations afford a training in independent thought, and teach the value of persistent concentration, terseness, and directness of expression. Where questions of wide range are set, both literary form and symmetrical logical order may be acquired and composition thereby better taught than even by the classical method of "narration from memory."

The final sitting of the section was occupied with two excellent papers on the present position of private schools, one by Mr. R. H. Hume, the President of the Private Schools Association, the other by Mr. Alex Devine, Head Master of Clayesmore School, Winchester.

Various reports by special committees were presented to the Section—that on the Free-place System, by Mr. C. A. Buckmaster and Mr. D. P. Berridge; that on Museums, by Mr. H. Bolton, and that on the Registration of Schools, by Lady Shaw.

FOREIGN AND DOMINION NOTES.

UNITED STATES.

An enterprising and esteemed contemporary irritates us from time to time, we confess it, by referring to the continuation schools in England as if they were realities; whereas, in truth, they stand at present to Mr. Fisher in the relation in which Mrs. Harris stood to Mrs. Gamp—they are but the phantoms of an imaginative brain. Yet Sarah, even in her most irresponsible moods, never thought of arming a Nurses' Association with statutory powers to appoint a day for Mrs. Harris to materialize. To quit jesting, we ask when continuation is to be drawn down to the plane of real things. Will Mr. Fisher amend Section 10 of the Education Act? Every day must bring home to him some new defect in it. Those "works schools"—do they not show him that he has made no provision for securing that the part-time instruction to be accepted [10 (3) (ii)] as an equivalent for attendance of the continuation school shall be *genuine*? How can the Local Education Authority judge of efficiency where it has no power to inspect? It is a crucial point of the whole scheme. And whether Mr. Fisher decides to amend Section 10 or to proceed with it in its present form, the urgent question is—When? The Swedish Obligatory Continuation Act is dated May 8, 1918, only a few months earlier than our own, and Sweden expects to reap the full effect of it by the end of 1924. Sweden is looking to a *terminus ad quem*; England has not even a *terminus a quo*, and when the talk is of "results apparent a generation hence," men ask derisively—From when? Again, already some parts of America are ahead of us. In the State of New York, for example, the local Education Board may compel attendance of the continuation school, if one has been established. For the English Local Education Authorities obligatory continuation remains a menace or a hope.

The tendency in America is for the State Legislatures to avoid the odium of compulsion by merely empowering the local Boards to compel for themselves. The English Act relieves the Local Authority of the odium by fixing it on the Board of Education; whereas the Legislature itself should have accepted it. Let us pass, however, to another topic. We believe in Internationalism through Science, and we are looking to America to show the way. Pray consider from this point of view some activities of the Rockefeller Foundation (whose "Review" we have just received) in 1918. It (1) extended the campaign against tuberculosis in France; (2) conducted demonstrations of malaria control in Arkansas and Mississippi; (3) helped to check a yellow fever epidemic in Guatemala; (4) made investigations and surveys, and instituted measures against the same disease in Ecuador; (5) continued or began hookworm control and encouraged sanitation in twenty-one foreign States and twelve States of the Union; (6) co-operated in promoting improved public health organization in Brazil and Australia; (7) supported a School of Hygiene and Public Health in connexion with Johns Hopkins University; (8) continued to help financially various War-work agencies, until the total contributed since 1914 reached nearly 22,500,000 dollars; (9) pushed forward the fifteen buildings of a new medical centre in Peking; (10) increased the funds of twenty-four missionary hospitals, medical, and pre-medical schools in China; (11) co-operated with South American institutions in establishing certain departments of research and teaching; and (12) maintained sixty-eight "fellows" and scholars from the United States, China, and Brazil who were studying at American medical schools. It is the spirit of *co-operation* running through all this that interests us. And the agents of the Foundation carry with them everywhere not only remedies and aid in money, but also the impulse to research. A great linking up of the nations through science is foretokened.

We told last month how Johns Hopkins University was offering courses in "Business Economics." "Its University Circular," No. 5, 1919, enables us to fix the content of the term as understood in America.

A basis of instruction is found in political economy and the general laws governing the modern industrial world. Then experts teach the student about investments, about foreign trade, exchange, and tariff policies, and about the principles and different forms of insurance. Advertising and salesmanship, business English and book-keeping—for each of these four subjects a course is mapped out. But business is a social activity, so that it is necessarily connected with the problems of society. A general course on social ethics is devoted to a study of the age with respect to the true value of its institutions and processes in promoting human happiness and moral efficiency; for commercial gain is not an end in itself. Nor can the trader be indifferent to questions of social reform; hence the various panaceas (the single tax, socialism, philosophical anarchism, and syndicalism), extolled by those who would change radically the whole economic order are subjected to careful analysis. Lastly, labour (the place of labour as an economic factor, the justification and the forms of labour organizations, the change in the attitude of law towards labour) has a special course allotted to it. Sixty-four years ago Gustav Freytag, in "Soll und Haben," sought to cast over trade the glamour of romance; Johns Hopkins exalts it by setting it in its fit place among the human activities that make for progress, and showing it as no less honourable than the rest if honourably pursued.

It is pleasant to know that the Germans still read Freytag.

When the French took possession of Strasbourg, they found in the library of the Kaiserliches Evangelisches Lehrerinnenseminar a new edition of his principal works—still in the packings; for the Germans had gone in haste. Will the Americans return to the reading of Freytag and to German in general? The attitude of some of the larger cities towards the question is illustrated by the Report of the Superintendent of Schools, Portland, Oregon, in which he writes:—"We confidently trust that a time is near at hand when all nations will be united in a compact of enduring peace; and when such a time comes we all shall need to know the languages of other nations. The boys and girls in the high school will be the leaders of the coming age. They must be prepared to meet the requirements at that time. Spanish must be learned, French must be learned, German must be learned, and learned with more enthusiasm than ever before." Pray observe that this is American opinion, not ours; nor do we represent it as the universal American opinion. Certain it is that German-born teachers of German will be less in demand. Says the official *School Life* (ii, 11):—"In the past we have erred by leaving the teaching of foreign languages too much to teachers native to the countries whose language they teach. In the future we shall be careful not to make the mistake.

Internationalism through Science.

What are "Business Economics"?

German in the United States.

we made in the teaching of German. We shall put the teaching of foreign languages more largely into the hands of American-born teachers." Returned soldiers and sailors are advised to equip themselves for such tasks.

The Thirteenth Annual Report of the Carnegie Foundation for the Advancement of Teaching relates mainly to insurance and the contributory system. It tells of the founder's optimism, his faith in human progress, his sincere desire to do the best with

the great fortune that he had acquired. What was written as a tribute to the living may serve as an epitaph. It is proper for us to commemorate in Andrew Carnegie a discerning and bountiful friend of education.

FRANCE.

In England there are afloat certain proposals to obliterate all distinction between primary and secondary education. Germany has its movement towards the *Einheitsschule*. At the risk of repeating something of what we have said before, we must particularize the great scheme of national education for France set forth by the society called "les Compagnons," lest haply some realization should condemn our reticence. The four great points of the society are these: (1) Every intelligent Frenchman has in justice the right to *instruction intégrale*, to complete education, primary, secondary, and higher; (2) education through all the three stages should be absolutely free; (3) a leaving examination (with a *diplôme d'études primaires* as its sanction) at the termination of primary studies should be imposed on all schools, which examination would at once eliminate the unfit and select the fit for the higher service of the nation; and (4) there should be an *école unique*: that is to say, there should be a uniform programme of primary studies for all children—a programme to be followed by all schools, State and non-State.

With regard to the second of these points, Catholic France contends that it were wrong to discharge the family from one of its chief duties, and all France must foresee great embarrassment for the Public Treasury under the new burden that free education would impose. As to the general principle of uniformity, English opinion has always hitherto been against the impressing of one rigid mould on all schools of the same order. But with whatever programmes of instruction, and under any organization, we must apply continually and with more pressure the doctrine of the sieve, which, as it seems, the Compagnons would apply but once. The primary school, to be efficient, must exclude the abnormal child. Every secondary school must be free to refuse or to eject those who are incapable of profiting by the instruction that it offers, and the power to do so should be exercised more relentlessly than in the past. Universities, too, should sift with greater severity. "By education," says an authority, "we mean the training of a man with a view to make him *all that he can become*." The just right of the Frenchman, or of the Englishman, is not to *instruction intégrale*, but to an education adjusted to his capabilities. Owing to the imperfection of our sieves, or a neglect to use them, we have curates who should have been blacksmiths, and poets who as colliers would have got us the coal.

We read lately that the French language was "the resultant of two forces—Hellenism and Romanism": and France is held by the French to be the sacred hearth of Classicism. To-day toward both Greek and Latin there is much lip service there. But what are the young actually studying? The results (just tabulated) of the Baccalauréat Examination, first part, Oct.-Nov. 1918, will show us:—

Section	Candidates examined.	Passed.
Latin-Greek	1,230	552
" Latin-Modern languages	2,173	959
" Latin-sciences	1,988	923
" Sciences-Modern languages ...	1,696	689

It will be seen that of 7,087 candidates less than 8 per cent. qualified in the section for which Greek is required. Some of the *académies* (administrative divisions) supplied only 30 or 40 candidates for the section, and to no candidate was the mark "Très bien" assigned.

Whilst there are Frenchmen (and Englishmen) who would thrust leaden soldiers from the nursery as begetters of bloodthirstiness, here is the Ministère de l'Instruction publique (*Bulletin Administratif*, No. 2384) approving fencing, prescribing the manner of teaching

EVERYTHING EDUCATIONAL

FOR PUBLIC AND SECONDARY SCHOOLS.

STATIONERY, REQUISITES, FURNITURE.

EXERCISE BOOKS.

Superior Paper. Artistic Style.
Exceptional Value.

Price 41/8 per gross.

Containing 72 pages; bound in limp cover with artistic tinted label, which can be printed with name of School if required. The books are supplied in various rulings.

We stock Exercise Books in all qualities and prices ready for immediate orders.

NATURE NOTE BOOKS.

Nature Note Books—the best and most complete series issued—made of excellent writing paper, interleaved with superior cartridge paper, and strongly bound—at 80/- per gross and upwards.

SCIENCE NOTE BOOKS.

The most accurate series issued. In various Rulings, including $\frac{1}{10}$ and $\frac{1}{8}$ in., $\frac{1}{16}$ and $\frac{1}{32}$ in., millimetre and centimetre, 2 mm. and 2 centimetre, at various prices.

Graph Papers in all Rulings.

A TRANSITION CATALOGUE

giving particulars of Exercise Books, Drawing Books, Examination Paper, and every School Requisite will be sent free on application.

LOOSE-LEAF BOOKS.

The Century Patent Loose-Leaf Binder is a superior stiff cloth bound cover, which opens quite flat; the loose leaves held in position by two ring wires, which are opened or shut by moving lever thumb piece up or down. Made in two sizes.

Quarto ($8 \times 10\frac{1}{2}$ in.), each 2/6.

Sixmo ($6\frac{1}{2} \times 8$ in.), each 2/3.

Paper ruled faint and margin to fit binder, in packets of 80 sheets,

Quarto ($8 \times 10\frac{1}{2}$ in.), per doz. pkts., 12/-.

Sixmo ($6\frac{1}{2} \times 8$ in.), per doz. pkts., 8/-.

FLAT FILES.

Several styles and sizes in stock.

Prices from 41/6 per 100.

FILING BLOCKS.

For use with above.

Sixmo, size $8 \times 6\frac{1}{2}$, 75/- per 100.

Quarto, size $10\frac{1}{2} \times 8$, 110/- per 100.

OWEN'S SCHOOL JOURNAL.

By J. EASTERBROOK, M.A.

The most popular Pupils' Journal. Arranged for a 5 or 6 days' week. Boys or Girls. One Term, 6/8 doz. Three Terms, 18/- per doz.

THE STANTON DESK

and every kind of School Furniture and Fittings are manufactured by our Stevenage Works, including Esavian Patent Folding Doors, Windows and Partitions, Physical and Chemical Laboratory Fittings, Cupboards, Lockers, Carpenters' and other Technical Benches, Museum Cabinets, Masters' Tables, &c., &c.

Our Works are fully occupied for at least 2 months with orders in hand, and work must be executed in rotation; consequently orders should be placed at once for furniture that may be required for the January term.

SIMPLEX MARK JOURNAL.

An excellent form of Pupils' Journal. The marks are entered by the pupils themselves. No extra work for the Class Master or Head. The records made promote keenness, neatness, and punctuality among pupils, and are of the greatest value to the school and parents. For Boys' and Girls' Schools. One Term, 4/- per doz. Three Terms, 10/- per doz.

O.M. PREPARATION BOOK.

An excellent book for Private and Secondary Schools. One Term, 4/- per doz.

TEXTBOOKS, MAPS, and DIAGRAMS.

The despatch and accuracy of our Book Department are exceptional. We carry the largest stock of Educational Books in London, and urgent orders are dealt with by our trained staff of assistants on receipt.

it, and instituting a *certificat d'aptitude à l'enseignement de l'escrime* (higher grade). Fencing is to be taught in *lycées* and *collèges* by certificated *maîtres d'armes*, assisted, if need be, by *maîtres adjoints*, placed under their direction and authority. It is from among these assistant instructors that the higher grade *maîtres d'armes* are to be chosen by means of an examination held at Paris every other year. The oral test consists of questions on the place of fencing in physical education, on the mechanism and harmony of the movements involved, and so forth. The practical tests comprise one lesson given to a beginner, one lesson to another competitor, and fencing bouts for pairs of competitors. We would not bring down on our heads the wrath of the pacific by recommending martial forms of education; yet we dare to think that no physical exercise makes so much as fencing for suppleness of body and grace of bearing. And the Englishman who would ruffle it in France without having learned to fence we would remind of the hint that M. Jourdain gave to the dancing-master:—"Etes-vous fou de l'aller quereller, lui qui entend la tierce et la quarte, et qui sait tuer un homme par raison démonstrative"; for the pupils of *lycée* and *collège* are henceforth to be trained by these picked *maîtres d'armes*. The Examining Board to select them will be constituted of one inspector of the Académie de Paris, one head master, one medical officer of a Paris *lycée*, with four past *maîtres d'armes*, and the Ministry itself will deliver the certificate.

M. Anatole France has been described as the intellectual son of Renan; he is also the cousin-german of Voltaire; and La Béchellerie, near Tours, where he lives, is his Ferney. When the Congrès des syndicats d'instituteurs met lately at Tours he was invited to address it, and his discourse has been read throughout France with lively interest. The key-note was this: "Brûlez! brûlez tous les livres qui enseignent la haine! Exaltez le travail et l'amour! Formez-nous des hommes raisonnables, capables de fouler aux pieds les vaines splendeurs des gloires barbares et de résister aux ambitions sanguinaires des nationalismes et des impérialismes qui ont broyé leurs pères." M. Anatole France preaches the cosmopolitanism of the eighteenth century. It is made a reproach to him that he delivered to French teachers a speech in which there was no France—a speech that might have been delivered almost without change to German teachers (*L'Ecole et la Vie*, ii, 49-50). A fine gospel he proclaims and wisely he bids us not to wallow in self-injurious hate; but "nationalisms and imperialisms" are not to be wiped out in a moment with the sponge of rhetoric.

We wrote last month that a Chair of Spanish was to be created at Toulouse; the *Bulletin Administratif*, No. 2381, announces that the Chair of the Spanish Language and Literature in the University of Toulouse is to be filled. French Universities show a tendency to grant diplomas after brief studies. Thus, for the new *diplôme élémentaire d'études italiennes* at Lyon one year of *scolarité* is enough; and a year is to be the normal duration of study for the *diplôme des mathématiques de l'ingénieur* at Besançon. Industrial chemistry is receiving much attention in France both at the Universities and in private institutions.

GERMANY.

Oh! it is galling to the Germans that the Rhein-Armee, or Army of the Rhine, is a foreign army of occupation, which publishes a daily paper, *The Cologne Post*, in the Marzellenstrasse, almost under the shadow of the Kölner Dom. That army is interesting itself in its own education. Not long ago Mr. Churchill paid a visit of inspection to the Army General and Commercial College in the Hansaring; and by what he said *The Cologne Post* (No. 123) is led to hope that the Army Council is giving immediate and earnest attention to the general education of the army. Already much has been done at Köln; and for such bread-winning subjects as agriculture, engineering, banking, book-keeping, and commercial arithmetic there is a keen demand among the soldiers. The War proved the need of an educated army; and in many cases military service has proved a training for the arts of peace. The problem is now to foster and develop what has been learned on the Rhine or in military schools elsewhere. Demobilization should not bring with it a loss of the newly awakened intellectual interests. It seems now that a War Office scheme will enable the military students to continue their studies.

CAPE OF GOOD HOPE.

Perhaps the most important event of the summer was the

PITMAN'S

BOOKS.

FRENCH.

THE PROGRESSIVE FRENCH GRAMMAR.

By F. A. HEDGECOCK, M.A., D. Sc. L., of the University of Paris. The author is a well-known authority on the subject, and the method is a combination of the direct with the indirect. In crown 8vo, cloth, 498 pp., 5/6 net. Also in Paris: Part I, 3/6 net; Part II, 2/6 net. Key, 3/6 net.

FRENCH FOUNDATION BOOK OF VERBS, ACCIDENCE, AND SYNTAX.

By the same Author. In crown 8vo, 91 pp., 1/- net.

FRENCH VOCABULARIES AND IDIOMATIC PHRASES.

By E. J. KEALEY, B.A. Intended to make the student think and express his thoughts in French. In crown 8vo, 151 pp., 2/- net.

BOOK-KEEPING.

BOOK-KEEPING FOR BEGINNERS.

A first course in up-to-date Book-keeping. With Answers and Exercises. In crown 8vo, 148 pp., 1/6.

THE ELEMENTS OF BOOK-KEEPING.

By W. O. BUXTON, A.C.A. This book is fully explanatory. In crown 8vo, cloth, 157 pp., 1/6 net.

ART.

DRAWING AND DESIGN.

By SAMUEL CLEGG. With a foreword by WILLIAM ROTHENSTEIN. A School Course in Composition. 230 pp., profusely illustrated with Coloured Plates. 10/6 net.

THE ART OF PAINTING IN PASTEL.

By J. LITTLEJOHNS, R.B.A., and L. RICHMOND, R.B.A. With a Frontispiece and Foreword by FRANK BRANGWYN, A.R.A. In demy 4to, cloth gilt, with 40 full-page Coloured Plates and 15 other Illustrations, 12/6 net.

READING BOOKS.

THE WANTS OF MAN.

By T. H. BOWTELL, M.A., B.Sc. (Econ.), M.Ed. A simple introduction to the problems of Economic Science. A very suitable reader in view of the urgent need for a knowledge of the subject at the present time. In crown 8vo, cloth, 209 pp., 2/6 net.

THE TRIUMPH OF MAN.

An account of the work of man during the Twentieth Century. Cloth, 248 pp., with 130 Illustrations, 2/- net.

NEEDLEWORK.

EMBROIDERY AND DESIGN.

By JOAN H. DREW. A book that will arouse new interest in the subject. The designs are the right size for tracing and working. Cloth, 115 pp., 82 Illustrations and Diagrams, 3/- net.

DRESS CUTTING AND MAKING.

By EMILY and MARION WALLBANK. For the Classroom, Workroom, and Home. Cloth, 271 pp., 265 Illustrations and Diagrams, 5/- net.

ENGLISH.

ENGLISH GRAMMAR AND COMPOSITION.

By W. JAYNE WESTON, M.A., B.Sc. The object of this book is to make the subject as interesting as possible. In crown 8vo, cloth, 320 pp., 3/6 net.

ENGLISH FOR TECHNICAL STUDENTS.

By F. F. POTTER, M.A., B.Sc. An interesting and useful book teaching how to write free and correct English. In crown 8vo, cloth, 110 pp., 2/- net.

SIR ISAAC PITMAN & SONS, Ltd.,
1 Amen Corner, London, E.C.4.

From Mr. EDWARD ARNOLD'S List.

A NEW SERIES OF PEDAGOGICAL WORKS, THE EARLIER VOLUMES OF WHICH WILL BE ISSUED IMMEDIATELY.

The Modern Educator's Library.

GENERAL EDITOR: Professor A. A. COCK.

The present age is seeing an unprecedented advance in educational theory and practice; its whole outlook on the ideals and methods of teaching is being widened. The aim of this new series is to present the considered views of teachers of wide experience, and eminent ability, upon the changes in method involved in this development, and upon the problems which still remain to be solved, in the several branches of teaching with which they are most intimately connected. It is hoped, therefore, that these volumes will be instructive not only to teachers, but to all who are interested in the progress of education.

Each volume contains an index and a comprehensive bibliography of the subject with which it deals.

Education: Its data and First Principles. By T. PERCY NUNN, M.A., D.Sc., Professor of Education in the University of London. Cloth, 6s. net.

The Teaching of Modern Foreign Languages in School and University. By H. G. ATKINS, M.A., Professor of German in King's College, University of London, and H. L. HUTTON, M.A., Senior Modern Language Master at Merchant Taylors' School. Cloth, 6s. net.

Moral and Religious Education. By SOPHIE BRYANT, D.Sc., Litt.D., late Head Mistress of the North London Collegiate School for Girls. Cloth, 6s. net.

The Child under Eight. By E. R. MURRAY, Vice-Principal of Maria Gray Training College, and HENRIETTA BROWN-SMITH, LL.A., Lecturer in Education, Goldsmiths' College, University of London. Cloth, 6s. net.

OTHER VOLUMES ARE IN PREPARATION.

ENGLISH.

English Narrative Poems. With Introduction by Sir HENRY NEWBOLT. 2s. 6d.

Selections from English Literature. Edited by ELIZABETH LEE. In four books, carefully graduated. Illustrated. Books I and II, each 256 pages, 2s. 6d. Books III and IV, each 320 pages, 3s.

Epochs of English Literature. By J. C. STOBART, M.A., formerly Lecturer in Ancient History at Trinity College, Cambridge. In 9 vols., 2s. 6d. each. I, The Chaucer Epoch, 1215-1500. II, The Spenser Epoch, 1500-1600. III, The Shakespeare Epoch, 1600-1625. IV, The Milton Epoch, 1625-1674. V, The Dryden Epoch, 1660-1700. VI, The Pope Epoch, 1700-1750. VII, The Johnson Epoch, 1742-1798. VIII, The Wordsworth Epoch, 1798-1830. IX, The Tennyson Epoch, 1830 to present day.

Kenny's Composition from English Models. Book I, 1s. 8d. Book II, 2s. 6d.

Essay Writing. By G. KENDALL, M.A. 2s. 6d.

HISTORY AND GEOGRAPHY.

A Social and Industrial History of England. By Dr. F. W. TICKNER, D.Lit., M.A., B.Sc. (Econ.) London. Illustrated, 7s. 6d. Also in Three Parts, 3s. each.

A History of England. By Prof. C. W. OMAN, M.P. 760 pages, 7s. 6d. In Two Parts, 4s. 6d. each: Part I, from the Earliest Times to 1603; Part II, from 1603 to 1902. In Three Divisions: Division I, to 1307, 2s. 6d.; Division II, 1307-1688, 3s. 6d.; Division III, 1688 to 1902, 4s.

Outlines of European History, 1814-1914. By G. BURRELL SMITH, M.A., Assistant Master at the Royal Naval College, Dartmouth. With Maps, 3s. 6d.

Scenes from European History. By G. B. SMITH, M.A. 2s. 6d.

The Last Century in Europe, 1814-1910. By C. E. M. HAWKES-WORTH. 7s. 6d. net.

A General History of the World. By OSCAR BROWNING. 700 pages. 7s. 6d. net. Also in Three Parts with separate indexes, 3s. 6d. net each. Part I, Ancient History; Part II, Medieval History; Part III, Modern History.

A Class Book of Geography. By A. W. ANDREWS, M.A. F.R.G.S. Cloth, 7s. 6d. A systematic text-book for Upper Forms, based on the study of Physical features. Interesting Original Diagrams are freely employed.

Arnold's Junior Geography. By W. M. CAREY, M.A., B.Sc. Cloth, 1s. 8d.

Outlines of Physiography. By the late Prof. A. J. HERBERTSON. Fully illustrated. 4s.

MODERN LANGUAGES.

First Lessons in French. By M. BAGULEY. With illustrations. 2s. 6d.

Arnold's Modern French Course. By H. L. HUTTON, M.A. Book I, 2s. 6d.; Book II, 3s.

Grammaire Française. A l'Usage des Anglais. Par E. RENAULT, Officier d'Académie; Lecturer in French at the University of Liverpool. 5s.

Petite Grammaire Française. By E. RENAULT. 2s.

Exercises in French Grammar. By E. RENAULT. 2s.

Junior French Reader. By E. RENAULT. 2s.

French à la Française. By Lady BELL and Mrs. TREVELYAN. Cleverly illustrated. Book I, 10d.; II and III, 1s. each.

Poèmes Choisis. A Book of French Poetry. Selected and Edited by R. L. A. DU PONTET, M.A. 2s. 6d.

Arnold's Modern German Course. By Dr. F. W. WILSON. 3s. 6d.

First German Prose Composition. By Dr. F. W. WILSON. 2s.

Second German Prose Competition. By Dr. F. W. WILSON.

A Spanish Course. By E. A. WOOLF. 5s.

A First Spanish Book. By H. J. CHAYTOR, M.A. 3s.

SCIENCE AND MATHEMATICS.

Inorganic Chemistry for Schools. By W. M. HOOTON, M.A. 5s.

Elements of Inorganic Chemistry. By the late W. A. SHENSTONE, F.R.S. 6s. 6d.

Outlines of Inorganic Chemistry. By Dr. E. B. LUDLAM. 5s.

Electricity and Magnetism. By C. E. ASHFORD, M.A., Head Master of the Royal Naval College, Dartmouth. 4s. 6d.

Elements of Geometry. By Dr. R. LACHLAN and W. C. FLETCHER, H.M.I. 3s. 6d.

Practical Trigonometry. By H. C. PLAYNE, M.A., and R. C. FAWDRY, M.A. 3s.

A School Arithmetic. By A. C. JONES, Ph.D., and P. H. WYKES, M.A. 5s. 6d. Parts I-III, 2s. 6d. each.

The Inductive Arithmetic. By E. SANKEY. Pupils' Books, I-III, 4d. each; IV, V, VI, VII, 6d. each. Class Teachers' Books, with Answers, Notes on Method, and Oral Exercises. Books I-III, 1s. 6d. each; IV-VII, 2s. each.

London: EDWARD ARNOLD, 41 and 43 Maddox Street, W.1.

Education of Natives.

appointment of a Commission for the purpose of formulating a scheme for native education, including industrial training, and more particularly:—(a) to review generally the present condition of native education in the Cape Province, and to take due cognizance of the reports of previous Government Commissions, and of such evidence as has been collected by the Department on the subject; (b) to submit recommendations in regard to the control and organization of native schools—primary, intermediate and secondary schools, training schools, industrial schools and agricultural schools; and (c) to submit recommendations in regard to the training of native teachers, and in regard to the curricula for the different types of native schools. Among the members of the Commission is The Chief Morelane, Paramount Chief of Eastern Pondoland.

UNIVERSITIES AND SCHOOLS.**WALES.**

This Library was founded by Mr. Gladstone in 1889, when he transferred about 27,000 volumes from his private library to a temporary building. Afterwards a sum of £30,000 was set aside to provide permanent buildings and to extend the scope of the Library. The present premises were erected as a national memorial to Mr. Gladstone, and the Gladstone family have also added a hostel capable of accommodating about twenty residents. The trustees now offer ten studentships to teachers in elementary and secondary schools in Wales and Monmouthshire, for the year 1920. These studentships entitle the holders to free board and lodgings for three consecutive weeks, as well as to third-class railway fares, and, as the number of applications greatly exceeds the number of studentships available, it is advisable that application should be made without delay for them. The Library at present has about 50,000 volumes, and therefore the student will have access to a great deal of most valuable material.

Several Education Committees have again revised their scales of

Salaries.

salaries, but the differences between the scales for the different counties are still very marked, and it is difficult to account for them. In Montgomeryshire, for instance, the scale for men is from £100-£240, whereas in the adjoining county of Brecon it runs from £120-£300, though the conditions in the two areas are very similar. Glamorgan has considerably improved its scale, and it will probably be regarded as satisfactory. Head masters' maxima vary from £385 to £460, according to the grade of the school; the corresponding figures for head mistresses being £308 to £368. In higher elementary schools the minimum salary for a head teacher will be £350 and the maximum £510. The Association of Secondary Teachers in North Wales has issued a circular to all the Education Committees asking them to adopt the departmental scale of salaries at least. Salaries in North Wales are very low compared with those paid in South Wales, and it is therefore to be hoped that this appeal will be treated sympathetically. The circular urges upon the authorities a minimum of £600 for head masters, which is the sum also advocated by the Welsh County Schools Association.

The Board have again published the results of the annual examinations with commendable promptitude, so that Education Committees and pupils will be in a position to make all their arrangements for the coming session without difficulty. For

the first time in the history of the Board's examinations several schools submitted no candidates for the Junior Examination, and it will therefore be interesting to find out what effect this change of policy will have on the general standard of the work in these schools. It is usually claimed that the abolition of the Junior Examination makes for elasticity and efficiency, and that it will also tend to prolong the school life of the pupil. But it will not of course, be possible to pronounce definitely upon these claims until the system has been in operation for two or three years. The Welsh Department have been a strong advocate of the policy of reducing school examinations, and their reports have, no doubt, influenced many educationists.

The Central Welsh Board have introduced another new feature into their examinations this year by requesting the schools to supply them with the order and their marks gained in each subject

during the school year—on the lines of the examinations conducted by the Scottish Education Department. In theory, no doubt, it is very desirable that the schools should co-operate with the examiners to a certain extent, but it is not clear whether the lists supplied this year constitute the best method of co-ordinating school work with the examination, for schools estimate their pupils' work during the term on different systems, though most probably the bulk of the marks is given for homework in every school. We understand that, in the examinations conducted by the London University, marks are not required; and that the schools simply classify the candidates as "good," "fair," "poor," &c., and, in our opinion, the Central Welsh Board would receive more guidance if they were to ask for similar reports from our schools instead of insisting on the individual marks.

SCOTLAND.

The topic which has been foremost in the minds of all concerned with education in Scotland during the past month has been the Education Department's salary scales. What the Education Authorities who find themselves confronted with the task of raising more money to meet the increased salary bill think about the matter, it is difficult to say with certainty, but it is possible to hazard a guess. The more enlightened, though rather unhappy at the thought of the fresh burden on the rates, have accepted the situation in a quite generous spirit, and are willing to do their best to satisfy their teachers. The others have also accepted it, but as an unpleasant necessity, and will probably try to avoid paying a penny more than they are compelled to pay. The teachers, for their part, so far as can be judged from the scanty evidence yet available, are, on the whole, fairly well pleased; and considering that, according to a trustworthy estimate, the total salary bill for Scotland will now be well over five millions—fully twice what it was in 1914—they would seem to have good cause to be so. At the same time, it would be useless to deny that there is deep discontent in certain quarters. The rural teachers, almost to a man and a woman, are satisfied, because the scales generally represent a very great advance on salaries which have hitherto been scandalously low. But it is different in the big towns and cities, especially in the west, where previous salaries

have been, comparatively speaking, good. As the teachers in large centres are more articulate than their country brethren, it is not improbable that a good deal of denunciation of the scales and all who are in any way responsible for them will be heard during the coming winter.

The discussion of the subject at the September meeting of the Council of the Educational Institute indicated the main lines that the critics are likely to follow. A large number of the women teachers are naturally disappointed that even the compromise of equal initial salaries, put forward by the Institute, should have been rejected, and that there should be a difference of £20 in the minimum of men and women. They are further irritated by the fact that the increment for the ordinary woman teacher should be £5 in the first years of service and only rise to the men's increment of £10 after a considerable time. It must be admitted that, supposing the Department had determined to adhere to the principle of inequality in salaries, they might have done so with more regard for the susceptibilities of the women. Another ground of objection to the scales, of which more is likely to be heard, is that they deal very hardly with existing teachers. There is an attempt to safeguard their position in a note which says that "in view of the smaller opportunities in the past, existing teachers who are not graduates might, if judged fully competent, be admitted, at the discretion of the Education Authority, to the benefit of the higher scales." But as a similar note in the Craik Report was a dead letter, this does not give much consolation to those who have to depend on the tender mercies of their Education Authority. While it will be a pity if the new scales do not allay the bitterness of feeling about salaries, protests against the scales, such as are to be expected from the city teachers, are likely to hasten the appointment of a permanent Salary Board for Scotland. That, indeed, is the logical outcome of the institution of national salary scales.

The new superannuation scheme which superseded the scheme established under the Act of 1908, follows closely the lines laid down in the English Superannuation Act. It applies to all teachers holding a certificate of competency in teaching who are giving whole-time service in our day schools, continuation classes, certified reformatory or industrial schools, training colleges for

PITMAN'S POSTAL COURSES.

The postal tuition meets exactly the requirements of teachers who are unable to secure oral training, or who desire to pursue the study of commercial subjects at home. One course, or any group of subjects, may be taken at any time, the lessons commencing from any stage of present knowledge. Write for details, stating the subjects in which you are interested.

teachers, and other central institutions. Even the small but important group of schools which are not under the management of an Education Authority are included, provided they come under the scheme of an Education Authority or are recognized by the Education Department as contributing efficiently to the higher education of the country. The only teachers of any consequence left out in the cold are the staffs of the Universities who must perforce be content with their own much less adequate contributory scheme until they join up with the rest of the profession and can make better terms with their help. The appointed day on which the scheme came into operation was April 1, 1919. After that date teachers may elect to retire at sixty and must retire at sixty-five; getting an annual retiring allowance of one-eightieth of the pensionable salary for each completed year of service up to half of the salary and a lump sum equal to one-thirtieth of the pensionable salary for each year of completed service, or one and a half times the pensionable salary, whichever is less. Pensionable salary means the average salary during the last five years of service. Specially generous provision is made for teachers who have already retired. Where the amount of allowance paid to them under previous schemes is less than £100, £1 is added for each year of service; where the allowance is between £100 and £200, 15s. is added; and over £200, 10s. The cost of this addition considerably reduces the possible extra benefits for existing teachers; but, happily, one hears no word of complaint from any quarter on this score. Everyone realizes the hard plight of many of the older generation whose pensions are painfully small because of the smallness of salaries at the time of their retirement. What concerns the ordinary teacher most just now is the date of the return of the contributions paid in under the last pension scheme. Many of them are looking forward to a substantial sum from this source to help them to meet the heavy charges of the present time.

The Scottish Board of Health have issued to Local Authorities a circular pointing out that the powers and duties of the Scottish Education Department with respect to the medical inspection and treatment of children and young persons have been transferred to the Scottish Board of Health. The object of the circular is to secure the co-operation of the Local Education Authorities (which are still responsible for the medical care of

their charges) with the Public Health Authorities. It is suggested among other things, that the school medical officers should, wherever practicable, be formally appointed officers of the public health staff, and that where there are child welfare clinics or school clinics these institutions should be available both for the Local Public Health Authority and for the Local Education Authority. There will be general agreement as to the need for some such co-ordination as this. The existing system, with the work of the medical officers of the Poor Law, Education, and Public Health Authorities overlapping, is wasteful and unsatisfactory. But it remains to be seen whether the new Board of Health will be able to overcome the difficulties in the way. The real cure for the evil is the abolition of *ad hoc* authorities dealing with education and poverty, and the concentration of their powers in a single general Local Authority like the County Council, as the leaders of the teaching profession argued strongly when the terms of the Education Act of 1918 were under discussion. Till the time come for this more fundamental reform, the Board of Health will have the support of all enlightened educators in their efforts to deal with the problem.

The appointment of Dr. J. A. Third, Spier's School, Beith, to be Director of Education for the Ayrshire Education Authority has compelled his resignation from the presidency of the Educational Institute before he had entered on the duties of the office. There will be regret among teachers all over Scotland that Dr. Third's well-deserved promotion should involve this loss to the Institute. His election as president by a unanimous vote was peculiarly appropriate this year. It was he who first propounded the idea of national minimum salary scales as the most promising method of raising salaries to a proper level over the country, and it is betraying no secret to say that it was largely due to him that salary scales found a place in the Act of 1918. He would have been an ideal leader in the campaign on which the Institute is now entering to secure a satisfactory application of the scales promulgated by the Department as a basis for the salary schemes of the various authorities. The Constitution of the Institute makes no specific provision for filling a vacancy in the presidency that occurs in the course of the year, but the Council, at its September meeting, decided to recommend Mr. T. S. Glover,

Rector of Berwick High School, to the forthcoming general meeting. Mr. Glover is not so well known to Scottish teachers as Dr. Third, and even in the Council a considerable section is ignorant of his qualities. The reason in the latter case is the highly honourable one that Mr. Glover was on active service till last year and so got out of touch with the Council. His confrères in the south-east of Scotland hold him in high esteem as a man of resource and character, and there is every reason to believe that, if elected, he will discharge efficiently the arduous duties that fall to the First Teacher during his year of office.

Mr. Alexander Emslie, who was dismissed from the Rectorship of Ayr Academy by the Ayr School Board eighteen months ago, has been appointed Rector of Spier's School, Beith, in place of Dr. Third.

The Emslie Case.

This, it is hoped, brings to a satisfactory end an unfortunate situation which has been disturbing the teaching profession in Scotland all through the past year, and seemed to threaten to go on doing so interminably. When dismissed, Mr. Emslie sought the aid of the Educational Institute, and with the concurrence of the Executive appealed to the Education Department against the School Board. The Department referred the matter to a legal expert, and on his advice, following an inquiry on the spot, gave its decision against Mr. Emslie. The Executive of the Educational Institute, which had talked at first of proceeding to extreme measures for his reinstatement, thereupon decided to go no further with the case. But Mr. Emslie and his friends were not content to accept the decisions either of the Department or of the Institute, and the agitation for reinstatement went on more briskly than ever. Mr. Emslie, taking advantage of the opportunity provided by the election of the new Education Authority, stood as a candidate in Ayr with his own reinstatement as the main plank of his programme and was returned at the head of the poll by a large majority. His friends got a special general meeting of the Institute called by requisition and succeeded in getting the previous finding reversed in favour of a motion to approach the Ayr Education Authority in order to have him made Rector of Ayr Academy once again. The Authority, though obviously impressed by the backing he had, had to face the fact that his appointment meant depriving of their position the two men whom the Ayr School Board had made co-rectors. The vacancy in Spier's School, Beith, however, has provided them with a way of escape from their difficulty, and by appointing him Rector there with the

consent of the Governors they have restored him to a position which is, for all practical purposes, as good as that of which he was deprived by Ayr School Board. In ordinary circumstances the matter would rest at this point, but it is not certain that it will in this case. There is talk of Mr. Emslie being run as a candidate for the presidency of the Institute against the candidate recommended by the Council, but it is to be hoped that Mr. Emslie's supporters will stop at that. Whether they should succeed or fail, it would be unfortunate for the Institute to have this contest. It would be better to allow time for the passions which have been aroused by the controversy to die down.

IRELAND.

This coming month is likely to be of great importance for Irish education. During it the Government have promised to produce their long-expected Education Bill for the co-ordination and reform of all departments of Irish education and for the improvement of the position of Irish teachers. It is generally understood that the Bill will follow the lines of the Reports of the Vice-Regal Commissions which sat last winter. Attempts have been made during the summer to anticipate its details, but it is only during the past month that it has been finally completed. On behalf of those engaged in education it may be said that any genuine attempt to bring Irish education up to date will be welcomed, and that great hopes are entertained that the Government will proceed boldly with their scheme of reform.

The month of September is one during which Irish intermediate schools begin their educational year, and in the early part of which they expect to know the results of the examinations held in June. These are useful and important in helping schools to determine classes and to arrange promotions. Unfortunately, a protracted printers' strike in Dublin has not only caused great inconvenience, as referred to last month, in delaying the appearance of the Rules and Programme of next year's examinations, which, instead of coming out soon after Easter, were only published the first week of September, but it postponed to an unusually late day the publication of the results of the examinations.

(Continued on page 686.)

Study by the best and shortest methods.

In whatever course of study you are interested the Correspondence Training of the Tutorial College will direct you by carefully graduated steps to certain success.

The Correspondence Tuition of the Tutorial College has been developed to the highest state of efficiency, both as a method of teaching and as a means of conveying ready understanding to the student.

The College knows and supplies exactly what guidance and information the student needs, and its exercises are carefully graded for easy assimilation and rapid acquirement.

The courses are compiled from unequalled sources of information and specialized knowledge, the coaching being thoroughly earnest and individual from start to finish. The "Tutorial" system is designed to make a success of every willing student, and those who train under it have their studies directed by the best professional and teaching talent in Britain.

Because it is neither based upon, nor like any other method of training, the Tutorial College can guarantee the efficiency of its correspondence training, and reminds you that it provides for you a far better chance of success than any other training institution or system.

Map Reading Made Easy

By Captain C. C. ESSON and G. S. PHILIP, F.R.G.S.

An interesting and lucid explanation of a subject of ever-increasing importance. Map-reading is an ideal subject for schools, as it shows the scholar the *practical application* of other subjects he is learning—Geometry, Arithmetic, Drawing, &c. It is also of great help to a thorough study of Geography. The large number of diagrams and maps greatly facilitate description and understanding.

FOR A SELECT LIST OF RESIDENTIAL AND HOLIDAY QUARTERS

See page 642.

The general summary of the boys' results is as follows:—

Grade.	Senior.	Middle.	Junior.	Total.
Number Examined	1,116	1,969	4,231	7,316
Number who passed—				
With Honours.....	141	274	418	833
Without Honours...	464	685	1,836	2,985
Total	605	959	2,254	3,818
Percentage of Passes ...	54.2	48.7	53.3	52.2

The summary for the girls is as follows:—

Grade.	Senior.	Middle.	Junior.	Total.
Number Examined	564	1,182	3,057	4,803
Number who passed—				
With Honours	84	131	227	442
Without Honours...	183	427	1,288	1,898
Total	267	558	1,515	2,340
Percentage of Passes ...	47.3	47.2	49.6	48.4

The percentage of boys passing in the Junior Grade is slightly higher than in 1918, but the percentage has fallen considerably in the senior and middle grades for both boys and girls, and in all grades is much lower than in 1917. This is, no doubt, largely accounted for by the epidemic of influenza which seriously interfered with the work of the majority of schools last winter; but there was also a general consensus of opinion that some of the papers in mathematics were unduly difficult. It is also worthy of remark that the number of candidates obtaining honours is unusually low. In order to obviate as far as possible the hardship that would be felt by some schools on account of the low percentage of passing, a new Rule has been sanctioned by the Government on the proposal of the Intermediate Board to the effect that the school grant should be paid not on this year's passes only, but on the average number of passes for the past three years, 1917, 1918, and 1919.

The Report of the Intermediate Education Board for 1918 was published last month. This contains the usual analysis of the results of the examinations, a statement of accounts, and a list of the grants to each school, including the payments made for the first time from the Duke Grant of £50,000. The accounts of the Board show that their total income was £84,627, and the chief heads of expenditure were: administration, £10,156; inspection, £5,403; examinations, £15,116; rewards, £6,388; and school

grant, £47,090. This school grant is exclusive of the Birrell and Duke Grants. The most interesting part of the Report deals with the recent Committee of Inquiry and with the question of expanding grants. On the report of the Committee the Board say that "while some members make reservations with regard to specific points, we find ourselves in general agreement with the recommendations of the Committee. The findings of the Committee constitute a strong endorsement of the views of the Board as expressed on several occasions, especially in our Report for the year 1916. Their recommendation as to the basis of distribution of grants is practically identical with that outlined in that Report. They further emphasize the urgent need for increased funds, particularly with a view to ameliorating the condition of the teachers, and express the view that the funds at the disposal of the Secondary Education Authority should be elastic. Both of these were strongly urged by us in our Report for 1916." On the matter of expanding grants, the Report calls the attention of His Excellency to the debate in the House of Commons on March 4, 1918, when Mr. Samuels, then Solicitor-General for Ireland, stated that the sum of £50,000, then being voted, was an equivalent grant and not stereotyped. It was to vary from time to time according to the amount paid for English education. Up to the present, however, although English grants have increased, there has been no increase in the Irish grant of £50,000. The Report gives the following figures:—Grants for secondary schools in England: 1918-19, £1,568,570; 1917-18, £1,396,100.—Increase, £172,470. Grants for secondary schools in England: 1919-20, £1,790,660; 1918-19, £1,568,570.—Increase, £222,090.

In the two years there has been a total increase in grants for secondary schools in England of £304,560, the Irish equivalent of which is £44,388, and this should be added to the £50,000 grant.

The Board trust that the undertaking given by Mr. Samuels on behalf of the Government will be carried into effect. Queen's University, Belfast, are to receive during the current year a sum of £8,000 from the Government in aid of their requirements. The University have issued a report emphasizing the need of new departments and the expansion of those already existing.

ERRATUM.—The title of Mr. E. H. Allen's little book reviewed in our September issue, page 634, is "What will my Pension be?" and not "What will my Position be?" as incorrectly given at the head of the notice.

THE SECONDARY, TECHNICAL AND UNIVERSITY TEACHERS' INSURANCE SOCIETY

(The S.T.U.T.I.S.)

Registered under the Friendly Societies Act, 1896. Regd. No. 1424 London.
Approved under the National Insurance Act, 1911. Approval No. 261.

Chairman: Sir JOHN D. MCCLURE, LL.D., M.A.

All persons whose main work is teaching other than in Public Elementary Schools are eligible for membership of this Society.

STATE SECTION:—

The forthcoming Valuation will, it is expected, show that this Section is in a very strong position and that valuable additional benefits will be able to be offered to its members.

Members who have been insured for at least two years, and who are passing out of Insurance in consequence of the Superannuation Act, or of larger salaries, are entitled to become *Voluntary Contributors*, and thus share in the Additional Benefits which they themselves have helped to create.

DIVIDEND SECTION:—

This Section is independent of the State Section and is for the insurance of those teachers to whom the Insurance Act does not apply, or *who desire additional benefits*. It possesses the advantage of a Savings Bank (by the creation of Own Funds and Deposit Accounts), and offers at a very low cost Sick Benefits up to £3 3s. per week. Hitherto about two-thirds of the members' annual contributions have been returned to them each year by being placed to the credit of their Own Funds.

UNIVERSITY OF BRISTOL.

FACULTY OF MEDICINE.

The WINTER SESSION commences on October 1st, 1919.

The University grants the degrees of Bachelor of Medicine and Surgery (M.B., Ch.B.), Master of Surgery (Ch.M.), Doctor of Medicine (M.D.), Bachelor of Dental Surgery (B.D.S.), and Master of Dental Surgery (M.D.S.), as well as diplomas in Public Health (D.P.H.) and Dental Surgery (L.D.S.).

The lectures and laboratory courses which are given in the University, although primarily designed for the degrees and diplomas of the University, are equally adapted to those of other Universities and Examining Boards, and students preparing for such external degrees and diplomas have equal attention paid to them.

Hospital Practice and Clinical Instruction are provided in the Hospitals and Asylum of the City, associated with the University for this purpose, and students have exceptional opportunities of studying the practice of Medicine from a large variety of cases.

Women are admitted to all classes, and attend them with men. The Hall of Residence for Women Students are situated on Clifton Hills, both near the University.

INCLUSIVE FEES—

For the M.B., Ch.B. curriculum	135 guineas.
For the B.D.S. curriculum, including Mechanical Laboratory	155 "
Do. excluding Mechanical Laboratory	115 "
For the L.D.S. curriculum, including Mechanical Laboratory	133 "
Do. excluding Mechanical Laboratory	93 "
For Mechanical Laboratory alone	40 "
Or annual fees may be paid, in which case the total amount is slightly increased.	
For the D.P.H. curriculum	30 guineas.
For additional particulars apply to Professor EDWARD FAWCETT, M.D., Dean, or to JAMES RAFTER, M.A., Registrar.	

THE SECRETARY OF THE WAR OFFICE announces that a limited number of boys may be nominated by the Army Council for admission to a Competitive Examination for one GILL MEMORIAL SCHOLARSHIP and a limited number of GILL MEMORIAL EXHIBITIONS which will be held at Brighton College on the 1st and 2nd June, 1920.

2. The annual value of a Gill Memorial Scholarship is £50 and that of a Gill Memorial Exhibition is £45; they are tenable for three years (the period may be extended to four years on the recommendation of the Head Master). This represents approximately half the cost of education at the College.

3. To be eligible for nomination by the Army Council a candidate must be:—

(a) Under fourteen and a half years of age on the 1st June, 1920; and

(b) The son of an officer of the Regular Army (serving or retired) or in default of qualified candidates being available the son of an officer of the Special Reserve or Territorial Force.

4. The successful candidates for the SCHOLARSHIP or EXHIBITIONS will enter Brighton College at the termination of the Summer Vacation.

5. Applications for nomination by the Army Council should reach the Secretary, War Office, London, S.W.1, not later than the 1st April, 1920 (accompanied by birth certificates and certificates of conduct covering the last two years).

6. Full particulars regarding the Examination, and copies of former papers set, can be obtained on application to the HEAD MASTER, Brighton College.

War Office,
May, 1919.

LE LIVRE ROUGE.

A First Book of French in Coloured Pictures. By E. MAGEE, Edgbaston High School for Girls, Birmingham. With many full-page Coloured Pictures and other Illustrations. Fcap. 4to. 2s. 6d. net.

LE LIVRE BLEU.

A Second Book of French in Coloured Pictures. By E. MAGEE. With sixteen full-page Coloured Pictures and many other Illustrations. 2s. 6d.

A NEW GRAMMAR BOOK.

By AGNES CATNACH, B.A. (Lond.) Assistant Mistress at King Edward's Girls' High School, Birmingham. 2s. 6d. net.

This book seeks to connect more closely the formal study of language with adequate expression of thought, and to attain this end all the work is based on the study of the sentence. It is hoped that to children studying on these lines English Grammar will be a subject of living interest and that the various facts of grammar will gain that logical connexion which they so often seem to lack.

The matter has been set forth as simply as possible, and in a manner to retain the interest of the pupil.

THE GOLDEN BOOKS OF ENGLISH VERSE.

A Graduated Course for Class study. Arranged by FRANK JONES, B.A., Senior English Master, King Edward's School, Aston, Birmingham.

In Three Books. Book II, now ready. 2s. net. Books I and III. In preparation.

The chief feature of this series is the teaching apparatus provided at the end of each poem. The objects kept in view in drawing up these aids have been to save the teacher's time, and to provide the pupils with an instrument by which they might test the thoroughness or otherwise of their understanding of the poem studied. Each teacher will no doubt supplement them as necessity arises; and to the pupils who have studied a poem in order to answer the questions asked, the aids will suggest other points for further consideration with the help of the teacher.

THE WARWICK SHAKESPEARE.

General Editor: Prof. C. H. HERFORD, Litt.D., Professor of English Language and Literature in the University of Manchester, Examiner of English in London University. The text of each play is accompanied by an Introduction, Notes, Glossary, and an Essay upon Metre. The "Warwick Shakespeare" holds place as the standard edition for the more advanced study of Shakespeare as literature, and is now universally recognized as the best annotated edition for school use. Crown 8vo, cloth boards, 2s. each net.

THE PLAIN-TEXT POETS.

With Introductions by teachers of experience and position, but no further notes are given. With Frontispiece, neatly bound in cloth covers, limp, 10d. each.

A BOOK OF ENGLISH HISTORY FOR CHILDREN. Part 1.

By LILIAS MILROY, Head Mistress of the Leamington High School for Girls, and ELIZABETH M. BROWNE, formerly Assistant Mistress in the Truro High School for Girls. 2s. 6d. net.

This history book seeks to steer a course between those mere "outlines," which are bound to be lacking in interest for young children, and the books of stories from history, often delightful to the readers, but apt to be rather too bulky for use as textbooks. The aim of the authors has been to select carefully the more important movements and the more picturesque incidents of history, and in connexion with these to give those ample details which children love, and at the same time to preserve a clear chronological sequence.

A RAPID SURVEY OF ENGLISH LITERATURE.

By E. H. BLAKENEY, M.A., Winchester College. 2s. net.

"A wonderfully comprehensive selection of brief characteristic extracts, with notes of the times and peculiarities of the writers, and will be found a very interesting book."—*Guardian*.

ENGLISH PROSE EXTRACTS FOR REPETITION.

Selected and edited by E. H. BLAKENEY, M.A. 9d. net.

"Mr. Blakeney has done very useful work in producing this little book of prose extracts, fine examples of prose for the use of schools. Extracts from writers such as Gibbon, Scott, Matthew Arnold, Shorthouse, Pater, George Meredith, Ruskin, and some quite recent writers are brought together."—*Times*.

THE JUNIOR SCHOOL SHAKESPEARE.

A series of the greater Plays, edited, with Introduction, Notes, &c., by Experienced Scholars, for Junior Students and Junior Candidates in the University Local Examinations. The Plays are edited chiefly from the literary standpoint, although philological notes, where such are required, are given. Clearly printed and neatly bound in limp cloth covers. With Coloured Frontispiece. 10d. each.

THE PLAIN-TEXT SHAKESPEARE.

A neat edition of the greater plays of Shakespeare, presented in a serviceable form at a cheap price. The text follows the well-known Junior School Shakespeare, which omits everything which might be thought undesirable in class reading. Cloth covers, 7d. each.

BLACKIE & SON, LTD., 50 OLD BAILEY, LONDON, E.C.4.

AND AT GLASGOW AND BOMBAY.

Supplement to THE JOURNAL OF EDUCATION AND SCHOOL WORLD.

No. 603.

OCTOBER 1, 1919.

SOME RECENT & FORTHCOMING PUBLICATIONS.

MODERN LANGUAGES.

French.

LE FRANÇAIS POUR TOUS par la méthode directe. By NOELIA DUBRULE. 12mo, cloth. 264 pages. Illustrated. 4s. net.

An introductory course in French, the object of which is to help the pupil to speak fluently, clearly, and distinctly, to give him the ability to read small news items in French newspapers, to write simple French letters, and to acquaint him with the fundamentals of French grammar. The exercises for oral work are numerous, varied, and interesting; as an aid to the acquirement of a vocabulary there are many interesting *jeux de mémoire*; and *chansons* with their accompaniments form an integral part of the book. The volume has a distinctly French atmosphere.

DE L'UNIVERSALITÉ DE LA LANGUE FRANÇAISE. By ANTOINE RIVAROL. Edited by W. W. COMFORT. vi + 62 pages. (In preparation.)

This reprint of the successful thesis submitted in competition for the prize offered by the Berlin Academy in 1783 in answer to the questions: "What has made French a Universal Tongue?" "Why does it deserve this Fame?" "May it be expected to preserve it?" forms a logical introduction to the study of French literature. The text is distinguished by that clarity of style and small vocabulary of general words which marked the best writings of the 18th Century, and is well adapted for study in the upper forms of Secondary schools, as well as by students of University standing.

Spanish.

PRIMERAS LECCIONES DE ESPAÑOL. By C. MARCIAL DORADO. 307 pages. Illustrated. 4s. net.

A first course in Spanish which seeks to simplify and to render as attractive as possible the learning of the language. Every lesson is short and contains only the words in common use; tedious rules have been avoided, but there are brief explanations with sufficient exercises to teach the student the essential points of grammar. The material for oral work, reading, &c., is of great variety, and includes stories and anecdotes from Spanish folk-lore, rhymes and riddles, songs with their accompaniments and games. The book includes some 30 black-and-white illustrations which form excellent bases for conversation, and a complete vocabulary.

COBA Y LAS COSTUMBRES COBANAS. By FRANK C. EWART. 157 pages. Illustrated. (In preparation.)

This reader consists of 14 sketches describing Cuba, its capital Havana, and the customs of its people. At the end of the book, which is well illustrated from photographs, are questions for conversation, exercises designed primarily for the purpose of illustrating idiomatic expressions, notes explaining geographical and historical allusions, as well as grammatical difficulties encountered in the text, and a complete vocabulary containing not only all words which are alike in both languages, but all irregular verb forms used, including radical changing verbs, thus making it possible to use the text early in the student's course.

NUMBER STORIES OF LONG AGO.

By DAVID EUGENE SMITH, Professor of Mathematics in Teachers' College, Columbia University. 142 pages. Illustrated. 2s. 3d. net.

NUMBER STORIES OF LONG AGO gives, in the form of stories told to children, a brief history of the science of numeration in different countries and ages. It tells among other things of the world's attempts to count, and of the methods of writing numbers adopted by the people of the ancient world; describes the evolution of the modern adding machine from the Roman *abacus*, and narrates how the children of long ago multiplied, divided, and wrote fractions. The book is a mine of information on a subject which has an important place in every child's school life, and on this account will interest both the pupil and his teacher. It contains many illustrations, eight of which are in colour, and a collection of curious old number puzzles.

NUMBER PUZZLES BEFORE THE LOG FIRE.

By the Author of *Number Stories of Long Ago*. 14 pages. 6d. net.

NUMBER PUZZLES BEFORE THE LOG FIRE consists of the number puzzles given in *Number Stories of Long Ago*, together with their solutions.

"Prof. D. E. Smith has successfully filled a gap by writing a booklet on the early history of numbers that will be the delight of the young, and will prove a 'mine of interesting information' to many of their elders. Even as a mere 'reader' his charmingly written and beautifully illustrated 'Number Stories of Long Ago' is well calculated to sow the good seed. Where it falls on fruitful soil the results may not indeed be immediately manifest, but may ultimately astonish that large section of the community who hold that all that deals with number is inherently unattractive, or even repulsive, to mortals."—*Nature*.

GENERAL METHODS OF TEACHING IN ELEMENTARY SCHOOLS. By S. C. PARKER. 12mo, cloth, xx + 332 pages. Illustrated. (In preparation.)

A simply written treatise on methods of teaching in the elementary school (including the kindergarten), suitable for the practical teacher and the training college student. The book is divided into two parts: Part I—The Fundamental Points of View; Part II—Learning Processes: General Aspects. The results of modern research in education furnish, wherever possible, the bases for the various discussions, but, where these are lacking, the author has relied upon such authoritative writings as those of William James. Much of the concrete material with which the book abounds has been derived from the demonstration school attached to the School of Education, University of Chicago, though other sources have also been drawn upon. The book contains about 50 illustrations, and at the end of each chapter there is a useful classified bibliography.

ELEMENTARY BIOLOGY: An Introduction to the Science of Life. By B. C. GRUENBERG. x + 528 pages. Illustrated. (In preparation.)

An introduction to biology for the sixth form student and general reader, the leading motive of which is man's conquest of his surroundings through the acquirement and application of more and more trustworthy knowledge. Stress has been placed upon the dynamic by speaking of what plants and animals do, and how they do these things, and in the selection, and arrangement of material, the author has avoided the arbitrary divisions of the specialist. In order to give the teacher the opportunity to select material according to individual preferences, local and temporary conditions, &c., the book contains more material than can be used by one class of students. The relation of science to human welfare is illustrated by the introduction of an unusual amount of quantitative material, chiefly in the form of graphs; pictures and diagrams have also been inserted for the presentation of structural details, which would otherwise require elaborate descriptions in the text.

GINN & CO., Publishers, 9 St. Martin's St., Leicester Sq., London, W.C. 2.

"IT IS CLEAR

that a capable agent who has pursued his calling for years will have gathered, by visits, by personal interviews, and by correspondence, a globe of precepts, and that his profession of recommending schools is no idle pretence."

The Journal of Education, June, 1916.

This is the definition, by a competent judge, of what should constitute a
USEFUL SCHOLASTIC AGENT.

It may be presumed that no one would knowingly make trial of the services of any other kind, but it is still true that a proportion of Principals are induced to yield to the importunities of plausible and worthless concerns, with the resultant loss and disappointment that might be expected. This is a disillusioning experience for which there is no necessity. The established, reliable Scholastic Agencies are not many in number, and they are well known, and their record and standing easily to be ascertained. As one of these we have a sufficient claim to clients' confidence. If, further, we obtain the greater share of Parents' Inquiries, we also take unusual pains to secure them.

As a result, few days pass without at least one letter of thanks from parents who appreciate the assistance we have given them. Principals are equally generous in expressing their indebtedness.

The following extracts are from recent acknowledgments:—

"When I first came here I spent over £50 in six months, advertising in the leading papers—result, **one** boy. Then I came under your Agency—result, a **steady stream** of boarders every term, more than filling up the vacancies caused by boys leaving. I have already had to open another dormitory, and am on the point of 'venturing' on another boarding house."

"Two years ago you sent me a pupil named ———. Through her parents I have had **four** good pupils this year from four different places, and through two of these I have **five** more coming this term: that is ten pupils from paying **one** commission."

If you have not yet made trial of our services, we shall be glad to hear from you, with particulars of your School.

143 CANNON STREET, LONDON, E.C. 4. Telephone: Central 5053.

THE EDINBURGH MEDICAL SERIES.

THE LAWS OF HEALTH FOR SCHOOLS.

By A. M. MALCOLMSON, M.D.

Containing 35 Illustrations. Crown 8vo, cloth.

Price 2s.

DISEASES OF CHILDREN.

By A. DINGWALL-FORDYCE, M.D.,
F.R.C.P.E.

Containing 32 full-page Plates (8 of them in colour) and 84 Illustrations in the text. Crown 8vo, cloth.

Price 12s. 6d. net.

RADIOGRAPHY AND RADIOTHERAPEUTICS.

By ROBERT KNOX, M.D. Edin., C.M. Edin.,
M.R.C.S. Eng., L.R.C.P. Lond.

Third Edition. Containing 90 full-page Plates and over 400 Illustrations in the text. Super royal 8vo, cloth in two volumes.

Vol. I, Radiography. Price 35s. net.

Vol. II, Radio-Therapeutics. Price 18s. net.

TUBERCULOSIS OF THE BONES AND JOINTS IN CHILDREN.

By JOHN FRASER, M.D., F.R.C.S.E., Ch.M.

Containing 51 full-page Plates (2 of them in colour), and 164 Illustrations in the text. Super royal 8vo, cloth.

Price 20s. net.

DISEASES AND INJURIES OF THE EYE.

By WILLIAM GEORGE SYM, M.D., F.R.C.S.E.

Containing 25 full-page Illustrations (16 in colour).

Crown 8vo, cloth. Price 12s. 6d. net.

PRACTICAL PATHOLOGY, MORBID ANATOMY, AND POST-MORTEM TECHNIQUE.

By JAMES MILLER, M.D., F.R.C.P.E.

Containing 111 Illustrations and a Frontispiece in colour.

Crown 8vo, cloth. Price 12s. 6d. net.

CEREBRO-SPINAL FEVER.

THE ETIOLOGY, SYMPTOMATOLOGY, DIAGNOSIS, AND TREATMENT
OF EPIDEMIC CEREBRO-SPINAL MENINGITIS.

By CECIL WORSTER-DROUGHT, M.A., M.B.,

Captain (Temp.), R.A.M.C.; and

ALEX. MILLS KENNEDY, M.D.,

late Captain, R.A.M.C.

Demy 8vo, cloth, with 8 full-page Plates and 56 line Illustrations and Charts in the text.

REVIEWS AND MINOR NOTICES.

ASPECTS OF CO-EDUCATION.

Advance in Co-education. Edited by ALICE WOODS.

(3s. 6d. net. Sidgwick & Jackson.)

There is a conspicuous lack of unity in this little volume, which is not surprising when one realizes that it is the work of fifteen different writers, all of whom have strong individual views. The editress does her best to pull things together in her excellent chapter on Principles, where the reader gets, at any rate, a general idea of what underlies the whole; but one wonders whether her contributors had an opportunity of reading this chapter. Mr. Homer Lane, who provides an introduction, at the end of which he half apologizes for giving his own opinions and observations on co-education instead of performing "the usual duties of one who introduces a book," is more concerned with his favourite topic of authority than with the subject under discussion. Miss Maude Royden, in her turn, treats co-education as a mere side issue in the great movement of feminism, and is in doubt whether that movement is at present ready for the utilization of co-education. She is honoured with "A Reply" by Mr. John H. Badley, who assures her that all is well, and the Woman's Movement may safely welcome the offered alliance. "The Human Aspect" is sanely and sympathetically treated by Mr. and Mrs. Platt; "The Parents' Point of View" is presented with vigour and insight by Mrs. Ethel Wedgwood; while that of "The Former Schoolboy" and "The Former Schoolgirl" are well stated by Mr. Zilliacus and Miss Horne respectively. Mr. O'Neill is somewhat florid and ecstatic in his dealings with "The Elementary Side." Mr. Cecil Grant deals tactfully yet frankly with "Purity," while Mr. Kenneth Richmond supplies the most technical chapter in the book, in which he deals with the psychoanalytic aspect of co-education under the title of "Boy and Girl Friendships"; Miss Margery Fry supplies a bracing but all too brief chapter, "On University Life," followed by an interesting and judicious treatment of "Countries other than England"; the whole being concluded by a flamboyant chapter on "Hopes," by Mr. John Russell.

The spirit of the whole is excellent; the individual contributions mercifully brief and pointed, though not always to the point suggested by the title of the book. Miss Woods is to be congratulated on this addition to the work she has so much at heart. The book is to a certain extent to be regarded as reporting progress since the appearance of her "Co-education" in 1903. On the whole she is justified in calling the present work an "Advance." But if she prepares still a third volume, as she suggests, she would be well advised to face one great difficulty that is scarcely noticed in the present. It is tacitly assumed that the gentleness of the girls will tone down the roughness of the boys, and the greater firmness and self-reliance of the boys will brace up the girls. Now, a well known Chief Inspector of Schools was open-minded enough to send his children to a co-educational boarding school, and as a result found that his girls were becoming "tom-boys" and his boys "misses." Other parents have expressed the same views. It lies with the co-educationists to show reason why each sex should copy the good rather than the evil in the other; at present they either calmly beg the question or fall back upon a vague optimism that declares that human nature is on the up-grade and necessarily moves higher. A second point that needs elaboration is the evidence of psychoanalysis. Miss Woods shows courage as well as insight when she includes Mr. Richmond's present contribution. The reader will no doubt regret that the chapter is not so full as its author hints he would have liked to make it. But, even as it stands, it bears eloquent testimony to the important bearing psychoanalysis is going to have on this question of co-education—and its influence is going to be on the *pro* side. What the discussion needs is scientific data, not dogmatic statements like: "We must not forget that there is usually between the opposite sexes a perfectly normal attraction, which (however we may account for its origin) is not 'erotic' in tendency." Here we have the contributor calmly assuming as an unques-

tioned fact a statement that would be hotly disputed by a certain school. So with the tiresome iteration which explains every apparent inferiority of girls to boys—"Is it not due to tradition and convention fostered by separate training?" This question is unanswerable one way or the other, and the implied argument has now earned decent burial. Co-education is in no need of such doubtful buttressing, as this volume itself proves.

PERSONAL AND SCHOOL HYGIENE.

- (1) *The Principles of Mental Hygiene.* By Dr. W. A. WHITE. (10s. 6d. net. Macmillan.) (2) "English Public Health Series."—*The Story of English Public Health.* By Sir MALCOLM MORRIS. *Infant and Young Child Welfare.* By Prof. H. SOURFIELD. (5s. net each. Cassell.) (3) *The Care of the Nose and Throat.* By W. STUART-LOW. (3s. 6d. net. Baillière.) (4) *Diseases of the Ear in School Children.* By Dr. J. K. LOVE. (5s. 6d. net. Bristol: Wright. London: Simpkin.) (5) *Simple Beginnings in the Training of Mentally Defective Children.* By MARGARET MACDOWALL. (3s. 6d. Local Government Press Co. [R. T. Leach].)

The story of the evolution of public health explains the multiplicity of the organizations caring for the health of the individual, the occurrence of overlapping, and the need for some measure of consolidation. The history really begins concurrently with that of general elementary education with the "new philanthropy" of the early Victorian period.

At first the connexion between the sanitary and education services was limited to precautions taken in connexion with epidemic diseases. Though Chadwick, in 1861, had advocated the formation of "a special sanitary service applicable to schools for the correction of the common evils of their construction and the protection of the health of the children," it was not until 1907 that such a system was legally established. The foundations of school hygiene had, however, been established prior to this by researches of Dr. Kerr and other medical officers appointed by the more advanced School Boards.

Under schemes now in force, the individual is provided with facilities for medical inspection and treatment throughout life, by the agency of infant welfare centres, nursery schools, school clinics, factory surgeons, and the arrangements under the Insurance Acts. Attention will thus be seen to be concentrating more and more on the treatment of the individual, and educationists should be on their guard lest the subject of the hygiene of education—school hygiene in the broadest sense—be somewhat relegated to the background. Many will therefore welcome the retention of a medical department at the Board of Education, despite the transference of duties as regard medical inspection and treatment to the Ministry of Health.

Dr. Mead, in 1720, wrote: "As nastiness is a great source of infection, so cleanliness is the greatest preservative." This has been the key-note to subsequent action. Dr. White (1) supplements this by showing that, though it has always seemed natural to attempt to secure improvements in living and greater happiness by approaching the problem from without, in modifying the environment the individual as well must be considered and the problem approached from within. The individual must consider his share in the relation to individual environment which makes up social life, and modify his conduct so as to change the relation to his own advantage. In this education plays a large rôle.

Many as are the evils arising from failures in cleanliness in the broader sense, one of the most important—chronic catarrh—is usually strangely unconsidered. All the above-mentioned authors, in one form and another, emphasize this point. Chronic catarrh involves lowered health and vitality. These lessen the child's interest in his environment, and add to the task of the teacher. Deafness and ear disease from this cause nearly always arise in the earlier years of school life, and, though amenable to early and continuous treatment, are resistant to intermittent treatment commenced after the con-

ditions are firmly established. Parents tire of the continuity, and so lose what has been gained; encouragement is therefore very necessary.

For those deaf from birth or early age there is nothing more important than special education from the first possible moment, since, whatever the potential mentality, the uneducated deaf mute sinks to the level of the imbecile. From this standpoint it is greatly to be regretted that deafness is a statutory excuse for the withholding of education until the age of seven, which means that the most valuable time for sense training may be irretrievably lost. In no branch of education is it more important to keep a child in the highest possible form of school as much as may be in contact with his normal fellows, rather than to allow him to become isolated by the use of a specialized sign language understood by but few. Early diagnosis is therefore urgent; Dr. Kerr Love (4) suggests the simple rule that the child who cannot hear a whisper at six feet is unfit for ordinary school classes.

Now that continuation schools will retain children to an age at which they begin to reason for themselves instead of assimilating uncriticized the statements put before them, more can be done in the way of education for civic life and parenthood. Teachers who contemplate courses on practical domestic economy and home-building will therefore welcome a book on infant welfare which treats of the subject largely from this standpoint, and gives information on the agencies which care for the family and the home, as well as matters of personal care of infants and suggestions for syllabuses and class methods.

For many years a knowledge of the psychology of the intellectual processes has been a part of the armamentarium of the teacher; a knowledge of recent work on the instincts and emotions, and the mechanisms of character formation, is perhaps even more important to those who have to deal with the adolescent. Many naughty or difficult children are wrongly classed because they are misunderstood. The practice of attaching specially trained psychologists to schools and juvenile courts merits special attention; but a diagnosis must not be expected to follow a single examination of an individual, as is too often required at present. All factors, internal and external, must be weighed. Social inadequacy is not solely a matter of intelligence, and the problems need patient investigation, free distortions which may arise from either sentimentality or moral indignation.

A mentally defective child offers problems of management to the parent as well as the teacher which may be beyond their ordinary experience. A simple guide to training, such as is provided by Miss Macdowall (5), may be said to fill a long-felt want. No child is so bad but that some improvement may occur, and so long as advance is being made there is always the hope of more to follow; the difficulty for the untrained helper is to bring himself to the necessarily low mental level required to make a start.

CLASSICS.

Beginner's Guide to Latin. By G. G. LOANE.
(2s. 6d. Rivingtons.)

To write a good beginner's book is a difficult task. What to insert and what to omit requires great experience and sound judgment, and, after all, time alone decides whether the result is a success. Mr. Loane takes a line of his own; he relies merely upon translation from Latin into English, and does not use translation from English into Latin. His plan is to give a portion of accidence and then continuous passages as exercises. He has no special vocabularies, but one general vocabulary at the end. The arrangement is decided by "convenience," and the whole accidence and much elementary syntax is covered. There are 120 exercises, and the book should be gone over in a year. Some quantities are marked, but it is difficult to see on what principle, e.g. *prospere*, *recte*, *genu*, *genuis*; there are mistakes in *deinde*, *memoria*, *praetereo*, *religio*; *feles* is omitted (see pages 47, 68, 85, 95). The third plural of *amavero* is *amaverint*, not *amaverunt* (page 29); in §§ 38, 83, and 84 the feminine forms are not clearly put. *Panis* is in the wrong gender twice on page 94. Some rare and difficult words might be avoided, e.g. *absque*, *bubile*, *aenigma*, *gulosus*, *collare*, *zona*. Indeed it would, we think, be

better to restrict the vocabulary for beginners considerably more than Mr. Loane has done.

- (1) *Elementary Latin Elegiac Verse Composition*. By R. MELDRUM. (2s. 6d. Rivingtons.) (2) *Latin Elegiac Verse Composition*. By the same Author. (5s. Rivingtons.)

These are companion books, the first introductory to the second. They are excellent for their purpose. The author from the beginning makes boys rely on their own resources of memory, vocabulary, and ingenuity, and, while giving hints, avoids paraphrase as far as possible. After some introductory exercises for technical purposes and illustrative of poetical uses, he has a series of other exercises grouped round two subjects—"The Life of a Country Boy" and "The Legend of Bacchus"—and in the more advanced book his method is to give a passage of Ovid to be learnt by heart and then some passages of English poetry for verse composition; in other words, to teach Latin verse writing by assimilation of Latin poetry. There are 700 lines of Ovid in all. The first book has 65 exercises and a vocabulary; the second 212 and no vocabulary. It is a pity that Mr. Meldrum did not ask someone to read his Introduction on Metre. It has several mistakes. He does not distinguish long syllables with a short vowel from similar syllables with a long vowel. Surely *right* in English contains a long vowel which as such would be counted long in Latin. Why does he mark *quē*, *Quīrinus* thus?

The Death of Turnus. By W. WARDE FOWLER. (6s. net. Blackwell.)

This is a companion volume to Virgil's "Gathering of the Clans" and "Aeneas at the Site of Rome," and, as the title shows, is a study of the Twelfth Book of the Aeneid. It has the same charm, due to a combination of love for the author, rich scholarship, and sound literary judgment. The twelfth book is, in Mr. Fowler's opinion, Virgil's most mature work, and reveals his mind more fully than any other except the sixth. "Its great wealth of detail and incident, its psychological subtlety, and the comparative difficulty of its language, give it a claim to closer study and more leisurely reflection than any other book in the poem." "Virgil seems to me here more completely master of his language and metre than ever: more entirely free to use and vary them as he pleases." The War will no doubt emphasize the lesson that Virgil wished to teach his own generation of the certainty of the ultimate triumph of *iustitia* and *fides*, as exemplified in "Aeneas," over *violentia*, with its delusions and pretences, as personified in "Turnus." Mr. Fowler helps us to understand the poet's contrast of the characters of Aeneas and Turnus, their relations to Lavinia, the functions of Aeneas and Latinus in the new Latium, the growth in the character of Ascanius, the rôle of Venus in the poem, the reasons for Amata's suicide. In addition to such general topics, he has excellent notes on special words, such as *pubentes* (line 221), *excellentem* (line 250), *pius* (lines 311, 839), *nimbus* (line 416), *lustrum* (line 474), *crudus* (line 507), *aequora* (line 524), *silvæ* (line 522), *mens* (line 554), *damno* with genitive (line 727), *superstitio* (line 818), *intempesta* (line 846). In line 97, *da* is misprinted *de*, and in line 790 *certamina* should be *certamine*. On page 145, *germana* is mistranslated "offspring."

"EARLY CHRISTIAN CLASSICS: TEXTS FOR STUDENTS."

- (1) No. 5: *A Translation of the Latin Writings of St. Patrick*. By Canon NEWPORT WHITE. (6d.) (2) No. 6: *Selections from the Vulgate*. Arranged by Dr. H. J. WHITE. (9d.) (3) No. 7: *The Epistle of St. Clement of Rome*. (6d.) (S.P.C.K.)

(1) This is an English rendering, with a two-page introduction, of St. Patrick's Confession and Letter, which are of the first importance, not only as an expression of religious experience, but also historically, as describing his missionary work in Ireland. It is a pity the Confession is not more definite in names of persons and places.

(2) The excellent introduction of five pages explains clearly St. Jerome's work. The Vulgate is, in the New Testament and the Psalms, a revision by him of older Latin Versions; but in the Old Testament, apart from the Psalms, almost entirely a translation from the Hebrew. For over a thousand years the only form in which the Bible was known in Western Europe, the Vulgate is still the Authorized Version of the Roman Catholic Church. The passages selected are significant either as magnificent in themselves, or specially sacred, or of historical importance, such as the Lord's Prayer, the Ten Commandments, and the Canticles.

(3) The introduction of five pages discusses the authorship (leaving the identity of "Clement of Rome" doubtful), the date, the contents and the sources. The editor's name is not given. The epistle is written in Greek about the end of the first century A.D., and is addressed to the Corinthians, owing to a serious disturbance in the Church caused by some malcontents.

EDUCATION.

Suggestions of Modern Science concerning Education. By H. S. JENNINGS, J. B. WATSON, A. MEYER, and W. I. THOMAS. (5s. 6d. net. New York: The Macmillan Co.)

Four distinguished American men of science, three of them members of Johns Hopkins University, here combine to record some of the more important suggestions of modern science concerning education. Some intelligent parents, dissatisfied with existing conditions, had argued—"if sensation tends towards motion, why, during the years when life is largely sensation, do we screw our children into desks five hours a day? if variety of type is desirable, why strive for uniformity? if surplus energy is necessary to further evolution, why not conserve that wonderful superabundant vitality of childhood?" The four papers of which the book consists are written respectively from the points of view of biology, psychology, psychopathology, and sociology. The names of these fearsome "ologies" need deter no reader, because all the papers are written in plain untechnical language. We have read them with deep interest, and have no hesitation in saying that they are remarkably good. The contents of such a book are of course extremely varied, and will therefore make a varied appeal to different readers. Few readers, however, will be uninterested in Mr. Watson's attack upon William James's theory about old-fogeyism in the human subject. Recent psychology leans to the hopeful view that it is not only never too late to mend, but also never too late to learn. The middle-aged learner is usually slower than the younger one, but he may be equally sure.

Ideals and Problems of Religious Education. Being Addresses and Discussions at the Teachers' Christian Union Conference, Swanwick, April 22-23, 1919. (2s. net. Teachers' Christian Union.)

Within 110 pages of smallish type this report gives an exceedingly satisfactory account of a series of meetings that proved of much interest to those who attended them. As Mr. Mansbridge remarked, it is a pity that only keen people actually attend these conferences. But a publication like this does something to spread the advantages of such interchange of thought. A good many changes of proposed arrangements seem to have been made, but there remained the important contributions that took the shape of formal addresses and are here fully reported. Of these the most important is Prof. A. A. Cock's discussion of the Religious Education of the Adolescent, twelve to eighteen years of age. Parts of this had already appeared in print, but the whole was recast and much valuable matter added. Taken along with Miss Waterhouse's paper on the Religious Education of Children up to twelve years of age, it covers in a most satisfactory way the whole field of the religious education of the young. At this point Mr. Mansbridge takes up the Religious Education of Adults and rounds off the whole. Canon Streeter deals with the general nature and scope of Religious Education; Canon Kennett supplies an example of Religious Instruction; and the High Master of Manchester Grammar School has an excellent paper on the Teacher's Inner Life. The spirit of the Conference is shown in the illuminating sentence: "It was agreed that more has to be learnt from than taught to the working woman." The report ends with some excellent suggestions for Study Circle discussion.

The Natural History of the Child. By Dr. COURTENAY DUNN. (7s. 6d. net. Sampson Low.)

The trail of "Notes and Queries" is to be found throughout this book. On page 306 a paragraph ends: "This is a digression, but I cannot see my way clear to exclude it when touching upon this subject." Most readers will feel that this apology ought to appear at a much earlier stage, and that there are not many paragraphs in the book to which it could not be appropriately added. Few of the fourteen chapters give evidence of consecutive thought, yet the volume is full of interesting matter. Fortunately Dr. Dunn makes no appeal to the professional teacher, so we are saved from the hopeless task of estimating his work from the technical standpoint. His descriptive sub-title runs: "A book for all sorts and conditions of men, women, and children," but even the general reader would expect more cohesion than is to be found in this natural history. What is the connexion, for example, between the text and the very attractive coloured frontispiece depicting the author's seven charming children in Highland costume? One answer may well be that it is put there as a guarantee of its author's right to speak about children—a right which we gladly concede. Who can speak with more authority on the subject than a doctor who is the father of seven? He may systematically split his infinitives, may be unskilled in the use of the double negative, and may show little discrimination in his choice of words, but he has knowledge and experience which command his reader's respect. Dr. Dunn does more. He captures his reader's interest. Once we give up the expectation of a reasoned and logically arranged presentation, and let ourselves

fall in with our author's mood, all is well. He is learned in queer, out-of-the-way directions; he is sensible, if a little exuberant; above all, he is attractive. He wins his readers in spite of their critical attitude. The practical schoolmaster himself cannot but be pleased with what he gets here, even though he comes to the book wanting something else.

FRENCH.

A School Grammar of Present-Day French. By J. E. MANSION. (3s. 6d. net. Harrap.)

Mr. Mansion belongs to the school of grammarians who write rather as men of science investigating natural phenomena than as law-givers issuing decrees. Grammar is to him something that changes, not something immutably fixed. It is based on the study of the forms of human speech; witness his classification of pronouns into stressed and unstressed, and his frequent reference to stress as one of the forces determining word-order. Grammar is the study of phenomena which, like all other phenomena, are the results of causes; these causes may be historical, as in the case of many eccentricities; or psychological, as with the rules for the use of the subjunctive; or partly logical and partly rhetorical, as in that most difficult branch of the subject, the position of adjectives. Mr. Mansion's book, therefore, is not one for beginners; one rather for quite advanced pupils only, though he speaks of it as intended for the middle and senior forms of schools. His conspectus of the uses of the subjunctive, for instance, is very well done, but with no other help it would be difficult to discover what mood verbs of "thinking" and "knowing" used affirmatively take, and verbs of "feeling" seem to be left out in the cold. By the way, it surprises us to read that *à moins que, bien que, afin que*, and a number of other old friends, take the subjunctive only "usually"; we do not know what authority Mr. Mansion has for this softening of the ordinary rule. Our author uses in the main the grammatical terms suggested by the Joint Committee on Grammatical Terminology. Many of these are convenient, but "future in the past" seems a clumsy phrase, and the sentence on page 173 [certain conjunctions] "are regularly followed by a verb in the future in the past tenses of the indicative," is not intelligible at first sight. It should be added that Mr. Mansion has had in view throughout the needs of translators into French, and comparisons between the usages of French and English are frequent.

Victor Hugo: Ruy Blas. Edited by H. L. HUTTON. (3s. 6d. net. Clarendon Press.)

Mr. Hutton's "Ruy Blas" is a veritable bran-pie. Here is grammar, philology, prosody, history, and literary criticism, besides the usual annotations on the text. There are nine short excursions on points of grammar and four on points of prosody—all valuable. For the history, Mr. Hutton has worked up the authorities used by the dramatist, and has quarried in many other mines of learning. Here, however, we cannot but think that his zeal has carried him too far. He gives us an elaborate note on the Neubourg family because the Queen was a Neubourg, another on the claimants to the Spanish succession because the Elector of Bavaria is once mentioned, and a third on the government of Spain from Ferdinand and Isabella to Charles II. All this is surely unnecessary, and calculated, moreover, to give boys and girls the impression that "Ruy Blas" is history, whereas it is really a brilliant drama of action, manners, and scenic effect, with some historical scenery as its background. It would have been better to give a brief sketch of the condition of Spain at the end of Charles II's reign, in the course of which it could easily have been shown what use Hugo made of the actual facts of history, and how frequently he perverted them whilst still retaining much of the spirit of the period. The twenty-three pages of introduction, again, are excellent in their way, but they are too much in the nature of a guidebook to the play, and a guidebook to the text is the one thing which a boy or girl ought not to have. On the other hand, such notes as those on the Flemings in Spain, on the connexion between Flemish and Spanish art, and the quotations from the contemporary authorities are really valuable. A short list of useful books is appended, to which might be added Paul de Saint-Victor's sketch of Charles II's court in "Hommes et Dieux," a good introduction to the historical setting of the play.

GEOGRAPHY.

Resources and Industries of the United States. By ELIZABETH F. FISHER. (3s. 9d. Ginn.)

This attractive book deals with the immense natural resources of the United States. It shows not only how these resources have been developed, but also the urgent necessity of conserving them. The chapters on the production of food, clothing, and building materials are well written, and the natural conditions that explain the food production are clearly indicated on a series of maps showing respectively relief, soil, rainfall, and temperature. Among many interesting problems discussed at some length may be

mentioned (1) the methods of irrigating the extensive dry lands of the west, (2) the draining of wet lands, such as the cypress swamps of Louisiana, and (3) the rotation of crops and the use of fertilizers with special reference to the tobacco and cotton-growing areas. In the concluding chapters, the processes by which articles are manufactured from raw materials are carefully described, and they include a brief account of the making of automobiles and aeroplanes. Questions, map exercises, and statistical tables are a useful feature of the book. The text is clearly printed and profusely illustrated with beautiful pictures. In a future edition, Figs. 84, 122, 161, and 162 might with advantage be omitted, as they are not referred to in the text, and they depict scenes outside the United States. For a detailed study of the economic geography of the United States, this book can be thoroughly recommended for use in English schools.

Introductory Meteorology. Prepared and issued under the Auspices of the U.S. National Research Council, Division of Geology and Geography. (4s. 6d. net. Oxford University Press.)

This book is the work of six of the chief officials of the United States Weather Bureau, and was first published last year. It is intended to be used as a supplementary textbook for the regular courses in geography and geology in Universities, colleges, and high schools, and for special courses arranged for the Army and Navy training units of the United States. The War has demonstrated the value of meteorology as a subject of military training, and, in order to meet the requirements of prospective officers, the book has been planned so as to present an intensive course in the fundamentals of practical meteorology, non-essential and theoretical matter being excluded so far as possible. It follows that if a student who wishes to become a professional meteorologist adopts this volume as a textbook, he will need to supplement his reading with a suitable course in mathematics and physics. The chief topics dealt with are meteorological instruments and observations, the temperature and pressure of the air, atmospheric moisture, the circulation of the air (both general and secondary), weather forecasting and climate. The information given is clear, definite, authoritative, and up-to-date; and the volume may be recommended with equal confidence both to students and teachers of geography in this country and to the general reader who has taken up the study of this fascinating practical science as a hobby, and wishes to keep himself in touch with the results of the most recent researches in aerology. The seventy-one illustrations include fifteen excellent photographs of clouds and several interesting diagrams showing meteorological conditions of the upper atmosphere. A welcome innovation is the introduction of the term *advection fog* for fog resulting from temperature changes due to horizontal transportation of air. The appendix contains a useful bibliography.

HISTORY.

Historical Portraits, 1700-1850. The Lives by C. R. L. FLETCHER. The Portraits chosen by EMERY WALKER. Part I (Vol. III of the series), 1700-1800. (12s. 6d. net. Clarendon Press.)

This collection of 113 historical portraits of persons eminent during the eighteenth century forms the third of the four volumes which some years ago Mr. Emery Walker projected as a companion to "Modern English History." The subjects are chosen with eminent catholicity, every department of national life being represented. A very wide and careful search, moreover, has evidently been instituted in order to secure the best portraits. The National Gallery has, of course, been the great storehouse from which the treasures have been drawn; but many private collections have been made to yield, by the kind consent of their owners, novel and interesting presentations of notable men and women. The interest of the volume is immensely enhanced by Mr. Fletcher's vivacious biographies. There is an engaging frankness about them which disarms criticism. They tell home-truths with a remorseless pugnacity. It would be out of keeping with their candour for a reviewer to say that they are free from bias. The Whig dogs are not allowed to have the best of it.

Sidelights on the History, Industries, and Social Life of Scotland. By L. A. BARBÉ. (10s. 6d. net. Blackie.)

This most attractive volume contains twenty sketches. Each of them depicts some episode or other related to Scottish history. As the title of the book implies, they deal rather with the minor than with the major events of the history; and their full interest, therefore, will be appreciated only by those who are acquainted with the broad current of Scottish polity. To such, however, they provide a rich entertainment. There are a number of personal studies, the most remarkable of which is that which traces the romantic but comparatively unknown career of Isabella Stuart, daughter of James I, who became Duchess of Brittany in 1441.

Cambridge University Press

RECENT PUBLICATIONS

ENGLISH

The Measures of the Poets. A New System of English Prosody. By M. A. BAYFIELD, M.A., formerly Head Master of Eastbourne College. Large crown 8vo. 5s net

The purpose of this book is to assist both students and lovers of poetry in general towards such a complete enjoyment of the beauty and music of English verse as can be attained only through a clear comprehension of its metrical framework. The author is strongly of opinion that, if this end is to be achieved, we must have a system of prosody that is on the one hand sound in principle, and on the other not liable to break down when tested. He therefore proposes a new system built up on the trochaic base.

The Story of Dr Johnson. Being an Introduction to Boswell's *Life*. By S. C. ROBERTS, M.A. With a frontispiece and 15 plates. Crown 8vo. Second edition. 4s 6d net

"Mr Roberts knows his Boswell from beginning to end, and one could have no better guide."—*The Daily Telegraph*

"Boswell apart, the book is worth having for its own sake."

The Westminster Gazette

Stories from Spenser. By MINNA STEELE SMITH, Fellow of Newnham College. Crown 8vo. With 8 pictures. 3s net

"Another interesting volume of the series so admirably begun by Miss Macaulay's *Stories from Chaucer*. It is a book that will appeal strongly to junior pupils in schools, and will fire them with the desire to read the stories in the original. It is embellished with a few good illustrations."

The Aberdeen Daily Journal

Cambridge Readings in Literature.

A Series of Anthologies from Homer to Masfield, illustrated with reproductions of pictures by great masters, from Botticelli to William Orpen. Edited by GEORGE SAMPSON. In five books. Crown 8vo. School edition, cloth flush. Books I, II, and III, 3s 6d net each; Books IV and V, 4s net each

"We have never seen more delightful books of their kind, and we predict that they will receive the most cordial of welcomes from teachers of English."—*The Scottish Educational Journal*

CLASSICS

Thucydides, Book IV, Chapters I-XLI

(Pylus and Sphacteria). Edited by J. H. E. CREES, D.Lit., and J. C. WORDSWORTH, B.A. Extra fcap. 8vo. With map, notes, and vocabulary. 2s 6d net. Cambridge Elementary Classics.

This edition has been prepared for those who have not long been studying Greek and who have reached the stage of the "First School Examination." A vocabulary has therefore been added.

Key to Exercises on Rules for Latin

Prose. By T. C. WEATHERHEAD, M.A., sometime Head Master of King's College Choir School, Cambridge. Crown 8vo. 7s 6d net

FRENCH

La Grande Guerre. Récits de combattants. Recueil

fait et brièvement annoté par A. WILSON-GREEN, M.A. Crown 8vo. 4s net

The range of this volume of episodes of the Great War, written by men who took an active part in the events they describe, is wide and varied. It covers warfare on land and in the air, in France, in Serbia, and at Cape Helles; it includes vivid pictures of life in and behind the trenches, in devastated France, in a French hospital, and in a German prison.

HISTORY

Henry the Sixth. A Reprint of John Blacman's

Memoir, with translation and notes by M. R. JAMES, Litt.D., F.B.A., Provost of Eton. Demy 8vo. 5s net

Britain in the Middle Ages. A History for

Beginners. By FLORENCE L. BOWMAN, Lecturer in Education, Homerton College, Cambridge. Crown 8vo. With 28 illustrations. 3s net

"Miss Bowman has rightly used contemporary literature as living evidence of the spirit of the times. . . . The book is very attractive and useful and should be widely used."—*The Times Educational Supplement*

Britain and Greater Britain in the

Nineteenth Century. By E. A. HUGHES, M.A., Assistant Master at the Royal Naval College, Dartmouth. Crown 8vo. 5s net

Suitable for the upper forms of schools. Special attention is given to Colonial history, which occupies nearly one-third of the volume.

EDUCATION

The Purpose of Education. An Examination of the Education Problem in the Light of Recent Psychological Research. By ST GEORGE LANE FOX PITT. Crown 8vo. 7s 6d net

A new impression of the second edition, bound in cloth. The volume contains a Preface by Prof. EMILE BOUTROUX, a Reply to Critics, and an additional chapter, *Perfection as the Ideal and Lessons of the War*.

"With the main thesis advocated we are in hearty agreement, and the presentment we have found stimulating in no ordinary degree. The perusal of the book could hardly fail to be profitable to any thoughtful man or woman."—*The Times*

SCIENCE AND MATHEMATICS

An Enquiry concerning the Principles of Natural Knowledge. By A. N. WHITE-

HEAD, Sc.D., F.R.S. Demy 8vo. 12s 6d net

Three main streams of thought are relevant to the theme of the author's enquiry—the scientific, the mathematical, and the philosophical movements; and the investigation is based on the principle that the scientific concepts of space and time are the first outcome of the simplest generalizations from experience. The four parts of the book are entitled respectively: *The Traditions of Science; The Data of Science; The Method of Extensive Abstraction; the Theory of Objects*.

Petrology for Students. An Introduction to the

Study of Rocks under the Microscope. By A. HARKER, LL.D., F.R.S., F.G.S. Fifth edition, revised. Crown 8vo. With 100 figures. 8s 6d net. Cambridge Geological Series.

Botany. A Textbook for Senior Students. By D. THODAY,

M.A., Lecturer in Physiological Botany, University of Manchester. Revised and enlarged edition. Crown 8vo. With 230 text figures. 7s 6d net.

"It is a pleasure to be able to recommend an introductory book on botany. . . . The illustrations are excellent and the general style of the book is of the quality to be expected from the Cambridge Press."—*The Gardeners' Chronicle*

The Study of the Weather. By E. H. CHAPMAN,

M.A., B.Sc. Large crown 8vo. With 56 illustrations. 3s 6d net. Cambridge Nature Study Series.

A series of exercises and problems on weather study, arranged with a certain adaptability to all times and seasons, and always bearing in mind the pressing importance of observing what you can and where you can. It is hoped that the book will be acceptable as an introduction to the study of Modern Meteorology.

An Elementary Course of Infinitesimal

Calculus. By H. LAMB, LL.D., Sc.D., F.R.S., Professor of Mathematics in the Victoria University of Manchester. Revised edition. Demy 8vo. 20s net

The new edition has been revised throughout and reset, and a number of changes have been made.

Plane Trigonometry for Secondary

Schools. By C. DAVISON, Sc.D. Crown 8vo. 6s 6d net

The first part (Chapters I-XVI) includes the ordinary course of elementary Trigonometry, though some sections are treated rather more fully than usual, especially graphs in the fourth chapter and the solution of equations in the eighth. The second part (Chapters XVII-XX) deals with inequalities, approximations and errors, de Moivre's theorem and series.

GEOGRAPHY

The North Riding of Yorkshire. By Capt.

W. J. WESTON, M.A., B.Sc. Crown 8vo. With 59 illustrations and three maps. 2s net. Cambridge County Geographies.

"An excellent introduction to the history, geology, industries, and other main features of the life of the administrative county."—*The Times*

"Like the other volumes of the series it is admirably calculated to stimulate interest, give instruction, and foster county pride."—*The Field*

LAW

Cambridge University Law Tripos

Papers, 1912-1916. Crown 8vo. Paper covers. 4s net

History of Roman Private Law. Part III,

Regal Period. By E. C. CLARK, LL.D. Crown 8vo. 21s net

FETTER LANE, LONDON, E.C. 4: C. F. CLAY, MANAGER

The later studies in the book are social and industrial in character. Among these the accounts of early coal-mining in Scotland and of the terrible ravages of the Plague are specially notable.

Armed Peace: a Non-Technical History of Europe, 1870-1914 A.D. By Dr. W. S. DAVIS, in collaboration with Dr. W. ANDERSON and Dr. M. W. TYLER. (10s. 6d. net. Heinemann.)

Of the twenty-four chapters in this work eighteen have been written by Dr. Davis and three each by his two colleagues. All three authors are members of the Faculty of the University of Minnesota, and their purpose in writing is to make clear to their American compatriots the deep underlying causes of the Great War. Their full and scholarly history is eminently moderate in tone and convincing in argument. It brings home to the Germans the guilt of the War, and it shows that to them specifically, and not to a vague "European anarchy," the outbreak was due. A unity is given to the book by the general idea that "there were three dominant factors in the international relations of the last forty years that enabled the Pan-German conspirators to bring on the great calamity in the precise form in which it finally inflicted itself upon the world." These factors were (1) the old hate between France and Germany, (2) the new rivalry between Germany and Britain, (3) the Balkan imbroglio. All students of current politics should read this masterly survey.

Britain in the Middle Ages. By F. L. BOWMAN. (3s. net. Cambridge University Press.)

This is a textbook for beginners, and it is made specially attractive to young minds by numerous illustrations, by frequent stories, and by careful simplicity of language. The chief effort of the writer, who is an expert in educational method, is to excite the interest of the infantile reader, and to train his immature intelligence in the way of observation and thought by providing exercises based on the tales and the pictures. An old-fashioned teacher may possibly ask, as he sees this pleasant book with its absence of dates and difficulties, whether "the rigour of the game" is not too much forgotten in these days of Montessori.

A Source-Book of Australian History. By G. H. SWINBURNE. (5s. net. Bell.)

This book is intended to introduce the source-method of teaching history into the schools of Australia. It contains forty-five extracts from original authorities—diaries, memoirs, dispatches, State papers—illustrative of the growth of the Commonwealth. The first is taken from Tasman's Journal, 1642, and it describes the discovery of the Great South Land. The last is a quotation from a speech recorded in the *Melbourne Argus* for April 1916, and it discusses the significance of the term "Anzac." Between these two the whole development of the Australasian Continent is sketched in a series of well selected contemporary utterances. The interest and value of the book are considerable; but they would be enhanced by a fuller description of the sources and by an index.

MATHEMATICS.

Dynamics. Part II. By R. C. FAWDRY. (2s. 6d. Bell.)

This volume has a distinctive flavour about it, and meets a decided need. Compact, clear, and not overloaded with detail, it bridges the gap which separates the elementary dynamics of the ordinary school book from the dynamics of rigid bodies. Of course, without some calculus little can be done with the latter subject, and the author rightly judges that it is easier to learn a little calculus than to use "calculus-dodging" methods of proof. Although mainly occupied with the elementary dynamics of rotating bodies, it also deals with such topics as projectiles, harmonic motion, turbines, and impact. Instead of deducing the laws of rotation from Newton's laws of motion, the author postulates three experimental laws analogous to the Newtonian laws. This procedure affords a short cut into the heart of the subject, but may tend to make students think that the laws governing the rotation of bodies are independent of those governing the ordinary linear motion of particles. We regret that the author persists in using W/g throughout to represent mass. It is, to say the least, uneconomical to use two symbols where one would suffice, but the greatest objection is that a constant is represented as the quotient of two variables. Apart from these matters, we regard the general plan and method of the book as excellent.

Differential Calculus for Colleges and Secondary Schools.

By Dr. C. DAVISON. (6s. Bell.)

The difficulties to be surmounted by a would-be writer of a textbook on the calculus lie at the threshold of the subject. He has to introduce his readers to a new group of ideas—the functional relation, convergence to and the existence of a limit, continuity; and his work must largely be judged by the manner in which he deals with these topics. Dr. Davison ignores the difficulties. In the

first paragraph he introduces without any explanation the terms *function* and *limit*, and proceeds forthwith to define *differential coefficient*. The possibility of the non-existence of the coefficient is not hinted at. Even Todhunter, whose works are supposed to be quite out of date, did not dispose of these fundamental matters in so summary a fashion. We regard this beginning as thoroughly bad and bewildering to the student. The rest of the text proceeds upon the usual lines, and calls for no comment. The examples appended to the chapters are of an easy and straightforward character, and there is a useful collection of revision exercises. Following them is a really good and suggestive set of subjects for essays, and finally a number of problem papers. In the hands of a teacher who makes good the obvious deficiencies at the beginning, the book should prove very serviceable for class instruction, especially on account of the examples.

Analytic Geometry. By M. M. ROBERTS and J. T. COLPITTS. (7s. 6d. net. Chapman & Hall.)

This book is by two lady professors, and is the result of several years' experience in teaching mathematics to students of engineering and science. This fact is some indication of the extent to which the teaching profession in America is being monopolized by women. Apart from this, the book throws light upon the different outlooks which prevail upon the teaching of mathematics on opposite sides of the Atlantic. In the present work polar co-ordinates are introduced in the fourth chapter and immediately applied to the tracing of many interesting curves, including spirals. Next the conics are described and traced from their equations referred to principal axes. After this, the subject of tangents and normals to algebraic curves—not necessarily conics—is taken up, followed by the theories of poles, polars, and diameters. In Chapter XII it is shown how to trace a conic given by the general equation. The following chapter takes the book beyond the usual English range by familiarizing the student with the shape of the more important transcendental curves, and in a final chapter the elementary co-ordinate geometry of the plane and line in space are discussed and the conicoids are traced from their equations. Compared with that of a corresponding course in this country, the treatment is lacking in depth, but this is compensated by the increase in breadth, and our teaching would gain by a judicious movement in the same direction.

MISCELLANEOUS.

Examination Papers in Phonetics. By DANIEL JONES. (2s. 6d. net. Oxford University Press.)

This useful collection consists of twenty-three papers set at University College (seven for English students and nine for foreign students in English phonetics, seven in French phonetics) and eleven papers set for the Oxford Certificate (seven in French and four in German phonetics). They represent a good standard of difficulty, and all the aspects of the subject are well represented. There is considerable variety in the questions asked, and they are well expressed. Sometimes they suggest that they have special reference to points treated by the distinguished author in his lectures, as, for instance, Question 4 in Paper A2. Is it really necessary for foreign students to learn by heart all the different ways in which every English letter is pronounced and every English sound is spelled, as is implied by such a question as 4 in Paper B7? And what might "the root [kinn-]" be? But, taking the papers as a whole, they are a sound piece of work, and likely to prove very useful to many students. To the average Englishman who knows nothing of phonetics they would be an eye-opener. How many, for instance, could answer the question: "Enumerate those English sounds which can never occur (1) at the end of a word, (2) at the end of a sentence. Give examples to illustrate the case of sounds which can occur at the ends of words, but not at the ends of sentences."

The British Navy Vigilant. By L. COPE CORNFORD. (2s. Macmillan.)

Mr. Cope Cornford is a skilled and practised writer. During the war he has had many opportunities, as an eminent journalist, to obtain first-hand knowledge of the grand fleet of the British Empire. This present book, therefore, is not only interesting, but also more than usually authoritative. It is intended to give the young people of Britain an insight into the actual working of that vast and splendid naval organization on which the safety of the Empire primarily depends. It describes the personnel of the Navy, the types of ships, and the uses of sea power. It gives a brief account of the main actions by means of which British sea-power has been established. Finally, it expounds the vitally important part which the Navy has played in the winning of the recent war. There are a couple of dozen illustrations.

FETTER LANE, LONDON, E.C. 4: C. F. CLAY, MANAGER

RELIGIOUS KNOWLEDGE.

- (1) *The Book of Deuteronomy in the Revised Version*. Edited, with Notes, by Sir GEORGE ADAM SMITH. (6s. 6d. net. Cambridge University Press.) (2) *The Book of Job*. By Dr. H. B. DAVIDSON. Adapted to the text of the Revised Version by H. C. O. LANCHESTER. (4s. 6d. net. Cambridge University Press.)

Sir George Adam Smith's *Deuteronomy* is an important addition to the Cambridge series. The treatment is full even to elaborateness, the introduction embracing 122 pages and the commentary nearly 400 besides. The scholarship of the book is of the finest order. Thus, there is a full and penetrating discussion of the latest phases in the criticism of the book, represented by the work especially of Steuernagel and Staerk. The handling of this complicated and difficult subject by Dr. Smith is thorough and complete. The conclusion reached is that "Deut. i-xxx is a compilation of various editions," but "whether these editions were due to the same author or to a school of writers sharing the same spirit may be held to be an open question to which there is no certain answer." It is refreshing to find that Dr. Smith will have nothing to do with Prof. Kennett's attempt to discredit the connexion between Josiah's Reformation and a form of *Deuteronomy* which is to be identified with the "Book of the Law" discovered in the Temple immediately before that event. He subjects Prof. Kennett's arguments to some effective criticism. Among many admirable things in the introduction we would especially call attention to the discussion of the form of the Book as a speech put into Moses' mouth (pages cxi ff.). This procedure reflects the conviction, deeply entrenched in the mind and memory of the people, and having a firm foundation in fact, that they owed everything to Moses, "and to his conduct and discipline of them through the wilderness." We regret the absence of maps. The author refers the student to his large *Atlas of the Historical Geography of the Holy Land*. This, we fear, is for many readers still inaccessible, and in any case it is a convenience to have good maps in the volume that is being studied.

Mr. Lanchester has performed a useful service in adapting the late Prof. Davidson's *Job* to the R.V., and in revising the old commentary and bringing it up to date. This has been done sparingly. Mr. Lanchester acknowledges special indebtedness in his revision to Prof. Peake's admirable commentary in the *Century Bible*. But

why in the selected "Literature" is no mention made of Ewald's work which is accessible in English, and why is not the English translation of Cornill's *Old Testament Introduction* (Williams & Norgate, 1907) given instead of the German edition of 1896?

The Book of the Prophet Jeremiah. With Introduction and Notes. By L. ELLIOTT BINNS. (16s. net. Methuen.)

This addition to the series of "Westminster Commentaries" deserves a hearty welcome. It is a substantial gain to the series to which it belongs, and is notable as providing an up-to-date treatment on one of the most important—if not the most important—of the Old Testament Books, which has not hitherto received as much attention from English scholars as it deserves. Mr. Binns has fulfilled the important task entrusted to him with care and discrimination. He is a good Hebrew and Old Testament scholar, and is acquainted with modern research. He acknowledges special indebtedness to Cornill's great commentary, as well as to other books, such as Cheyne's "Jeremiah" and Battenwieser's "Prophets of Israel" (Part I). Those who have read the latter work will understand the importance attached to it by Mr. Binns. In his voluminous introduction the author of the commentary discusses the life, times, character, teaching, importance, and influence of Jeremiah. Here we could wish that Mr. Binns had laid more stress upon Jeremiah's importance as the prophet of individual religion, though this aspect of his teaching is by no means ignored. There is an excellent section on the prophet's indebtedness to predecessors, especially to Hosea, which is rightly insisted upon. On the vexed question of the date of *Deuteronomy* Mr. Binns is content to accept the position of Prof. Kennett that the Book was composed during the exile, and is not to be identified in any form with the Law-Book discovered in the Temple during the reign of Josiah. This view is not widely shared by critical scholars. In the commentary proper the exegetical notes are well done, and will be a boon to many students. An excellent feature of the Book throughout is the references to modern literature, which are often very apt, and lend an added interest to the discussion which many readers will appreciate.

S. P. B. MAIS'S

ENGLISH COURSE FOR SCHOOLS.

MR. MAIS'S "An English Course for Schools" (6s. net) will be used in schools only when and if schoolmasters believe it to be better than its competitors. To come to any conclusion about it, however, the schoolmaster must see it, so I wish to say here and now that I will send a copy on approval to any real schoolmaster who cares to ask for it on the understanding that if on examination he does not find it suitable for his class he will return it. I will adopt the same plan with D. C. Somervell's "A Companion to 'The Golden Treasury'" (2s. 6d. net).

Mr. Mais's book has pleased those of his critics who have so far dealt with it. For instance, *The Times Educational Supplement* (August 28) described it as "a refreshingly unconventional treatise; it ought to be thoroughly readable to any boy or girl who is at all capable of profiting by it"; *The Globe* says: "He has solved the problem of how English should be taught"; and *The Westminster Gazette*: "Arranged on novel and sensible lines; it has much to commend it". Mr. Mais is an Assistant Master at Tonbridge, and an Examiner in English to the University of London.

GRANT RICHARDS.

TEACHERS REGISTRATION COUNCIL.

REPRESENTATIVE OF THE TEACHING PROFESSION.

(Constituted by Order in Council, 29th February, 1912.)

OFFICIAL LIST OF REGISTERED TEACHERS

The Statutory duty of the Council is to frame and keep a Register of Teachers, and a list of those registered under the conditions prescribed by the Council will be published from time to time. The first list was issued in 1917, and the second one is now in course of preparation.

In addition to its statutory duty, the Council has acted in co-operation with the Board of Education in many important matters affecting the interests of Teachers.

Up to and including the 20th of September, 1919, the number of applications for admission to the Register was 29,800. All qualified Teachers who have not already registered should write at once to:—

THE SECRETARY,
TEACHERS REGISTRATION COUNCIL,

47 BEDFORD SQUARE,

LONDON, W.C. 1.

of fifteen public lectures delivered during the first half of 1918. Most of them deal with fundamental aspects of the food supply, to which war conditions compelled specially close attention, but which will demand equally serious study during peace. The accessory food factors known commonly as "vitamines" are dealt with by Miss Margaret Hume, alcoholic beverages by Prof. Cushny, and the possibilities of increased crop-production by Dr. E. J. Russell—to mention a few of the food problems considered here in the light of recent research. Other lectures of the series are concerned with subjects of no less interest. In "The Physiological Aspects of Flying," Colonel Flack describes the physical and mental tests devised for the selection of war pilots. "Efficiency and Fatigue," by Dr. H. M. Vernon, is a remarkable record of experiments destined to initiate great changes in industrial conditions; while in "Fresh Air and Efficiency," by Prof. Kenwood, many venerable and cherished traditions on the subject are shown to be mistaken. Altogether the book is one to be read and enjoyed by all who are interested in physiological problems of "practical" importance, as well as by students of biology.

Advanced Lecture Notes on Light. By J. R. ECCLES.
(7s. 6d. net. Cambridge University Press.)

This book is a sequel to the author's "Lecture Notes on Light," and it is stated that the method is a continuation of that adopted in the earlier volume. The volume appears to be a presentation of an elaborate abstract of the subject, and, as no diagrams are given, and alternate pages are blank, it may be presumed that it is intended that the student shall draw the diagrams himself. This method may have advantages where the lecturer is prepared to draw the figures carefully for the student to follow, but for a textbook it is desirable that at the time of reading the student should have accurate and clear diagrams in the text. The matter is clearly given and the paper is good, the spacing being decidedly luxuriant. Exception may be taken to the fact that the dispersion relation for thin prisms is applied to the case of the direct vision spectroscopy. This is misleading, as the prisms in this case do not approximate to being thin. On page 43, Spherical Aberration is dismissed with a summary of three of the most important conclusions, without any discussion of the reason for them. On page 45 occurs the expression, "light-grasping" power of an objective, which appears strange; and on page 47 it is stated that "a luminous body is a source of some mechanical influence called 'light.'"

PRIMARY SCHOOL NOTES.

The Procrastination of the Board.

THE failure of the Board to bring into operation Clause VIII of the Education Act has been noted with consternation by those who are in close touch with public opinion, and who believe that a sound system of public education can alone ensure the spiritual and material salvation of the country. The passage of the Education Act came at a time when unparalleled sacrifices had been made to uphold a good cause: when in the flush of victory the people were prepared to undergo further privation in order to equip our youth for a fuller life in a world at peace. The Act was nobly and boldly conceived, and the timidity of the Government in carrying it into execution is, in consequence, the more inexplicable. Until Clause VIII is applied the Act will continue to be a mere name so far as the primary schools are concerned; and in the meantime the enthusiasm of the public for education is, with its faith in Government departments, declining rapidly. It is quite possible that, before the appointed day for raising the school age to fourteen years is fixed, there may be a change of Government.

The Key to the Position.

It has been generally recognized for a generation and more that the supply of teachers has been unsatisfactory in volume. Circulars galore have bewailed the fact; but the rising unrest among teachers has perhaps emphasized it most effectively. The adoption of the strike policy in many areas has precipitated the crisis, and there can be no doubt that the supply of men teachers has now definitely failed, while that of women is quite inadequate. The only hope of improvement lies in the consultation which is now proceeding upon a national scale of salaries for teachers. The utter failure of the Departmental Report on the same question accentuates the necessity of adopting a policy which will stimulate recruitment to the profession by offering tolerable conditions of service to all teachers. The fact that there were 2,722 boy candidates entering the profession ten years ago, as compared with 780 last year, and that during the same period there has been a decrease of 1,805 in the number of girl entrants, emphasizes the danger which threatens not

(Continued on page 710.)

only the foundations of education in the country but also its very civilization.

A Provisional National Scale.

IN view of the scale recently drawn up for the payment of policemen it may be taken for granted that any commencing salary of less than £180 per annum for a fully certificated assistant teacher on a minimum national scale will meet with strenuous opposition from Primary School Teachers. Many will oppose a minimum of less than £200 per annum on the ground that policemen of nineteen or twenty years of age receive the equivalent of this amount as an initial remuneration. Under the new national scale, railway clerks engaged in work of more than ordinary responsibility must attain a maximum of £350 per annum at the age of thirty-one. The feeling of representative teachers appears to be in favour of the acceptance of a temporary scale ranging from £200 to £400 per annum by annual increments of £15 or £20. Within a specified period there would be a maximum approximating to that of assistants in Secondary Schools where the professional and educational qualifications are similar.

The Re-opening of Evening Schools.

IN many areas the present Winter session marks a general attempt on the part of Local Education Authorities to re-establish evening schools and classes which were allowed to lapse during the war period. Since the teachers in these schools gain considerable experience of the best methods of dealing with the practical problems of continuative education inasmuch as their work lies among pupils beyond the primary school age, they should form a valuable nucleus for staffing the new continuation schools when they are set up. Revisions of salary scales for evening school work have been unduly delayed in certain districts, with the result that such work has been refused by the teachers concerned. In some cases strikes have been resorted to, and in consequence the evening schools cannot open. It is often overlooked by Education Authorities that a cash payment of 10s. per evening, for example, is now subject to an income-tax charge of at least 2s. 3d. in the £1, so that its face value is only about 8s. 11d. and its real value about 5s., as compared with 9s. 4d. in 1914.

Obituary.

THE death of the late Mr. George Sharples, former President of the N.U.T., and one of the oldest members of the Executive, is a heavy loss to the teaching profession, and there is little doubt that his strenuous efforts in the cause of education indirectly contributed to his premature decease. As the representative of Lancashire teachers on the County Education Committee, he contributed materially to the atmosphere of cordial co-operation which has always distinguished the relations between the County Committee and its teachers. His constituents always relied implicitly upon his judgment; and his unerring faith in the principles of democratic representation made him an ideal professional member of an Education Committee. On the purely professional side Mr. Sharples will always rank as one of the pioneer band of Lancashire school masters who revived village and inter-town sport, first by personal participation in games, and secondly by including organized games in the school curriculum. In the death of Mr. Harris, one of the younger members of the Executive of the N.U.T., the Union has lost one of its most promising adherents. There is reason to believe that his zeal for school reform pressed heavily upon an enfeebled physique; but he never spared himself, and his winning personality will be sadly missed at the Annual Conference and in the Union Council chamber.

N.U.T. Notes.

THE decision of the Executive to suspend all strike action pending the report of the Advisory Committee on Salaries marks a critical stage in the history of the Union. The report is awaited with much interest by the local associations, all of which have definite views of what the national minimum scale should be. It is realized that Executive members are in a difficult and responsible position, and there is a general desire on the part of members to refrain from any action which would impede the progress of negotiations.

The Thank-Offering Fund of the Union in support of teachers who do not benefit from the present superannuation scheme now exceeds £18,000. The record of members of the Union who have served in the War will shortly be published in the form of a handbook. It will include a roll of honour and a list of distinctions awarded. In connexion with the next Easter Conference at Brighton, it has been decided to hold an educational exhibition.

Practical Hints on the Teaching of Latin.

Being Four Lectures Delivered at Ilkley at the Board of Education's Latin Courses for Teachers in August 1918 and 1919. By L. W. P. LEWIS, M.A., Senior Classical Master, Bradford Grammar School. 5s. net.

Companion to Diaconus. By GEORGE G. LOANE, M.A. 6s. net.

Book II Just Published.

Lay's Pupils' Class-book of English Composition.

By ED. J. S. LAY, Author of "The Pupils' Class-books of Geography, History, The Vegetable Garden," &c. Illustrated. Book I (for children of 9 to 10). 1s. Book II (for children of 10 to 11). 1s. 3d.

The Schoolmaster:—"To write a book on English Grammar and Composition which will attract, and not repel children, is a feat upon which the successful writer may be fairly congratulated. The little work before us is ideal, for here are certainly lessons, but disguised so cunningly and cleverly that our young people will imagine they are at play when 'The Pupils' Class-book of English Composition' is placed before them for the purposes of study. . . . A book which we feel sure teachers will welcome and use with pleasure and profit."

Outlines of the History of the English Language.

By E. CLASSEN, M.A., Ph.D., Author of "Lectures on Style and Composition." 5s. net.

NATIONAL SERVICE RECORD

A record is being prepared of services rendered
in connexion with the war by Members of the
COLLEGE OF PRECEPTORS and holders of the
College Diplomas. For this purpose the Secre-
tary will be glad to receive information with regard
to such services, whether rendered in the fighting
forces, or in the auxiliary forces—e.g., Red Cross
organizations, Special Police, Women's war
organizations, or in other ways. He will also be
glad to receive from Members and Diploma holders
any proposals which their experience may have
suggested for improvements in methods or organiza-
tion, especially in relation to education and its use
as a training for national service.

PRELIMINARY EXAMINATIONS

FOR

MEDICAL, DENTAL,

AND

PHARMACEUTICAL STUDENTS

The COLLEGE OF PRECEPTORS holds Pre-
liminary Examinations in March, June, September,
and December. All the Examinations are held in

BOOKS BY SIR ARTHUR QUILLER-COUCH

Studies in Literature

Demy 8vo. 10s 6d net

"Where shall we begin our thanks to the author of this stimulating, sensible, and delightful book?"—*The Times*

"The reader is charmed by his critical acumen and width of sympathy, his sparkling wit and apt illustrations, his aphorisms, his lightness of touch, from the opening lecture . . . down to the exquisite closing pictures of the patriot Pasteur."

The Church Family Newspaper

On the Art of Writing

Demy 8vo. 8s 6d net

"The most fitting tribute we can pay to this series of lectures is that their style and method are not only a testimony to the truth of Sir Arthur's precepts, but themselves a living example of them. . . . Here, in the written page, is that 'appropriate, perspicuous, accurate, and persuasive' style which Sir Arthur lays down as the four corner-stones of the art of writing."—*The Nation*

SOME RECENT BOOKS

Problems of Cosmogony and Stellar Dynamics. Being an Essay to which the Adams Prize of the University of Cambridge for the Year 1917 was adjudged. By J. H. JEANS, M.A., F.R.S. Large royal 8vo. With five plates. 21s net

The present essay is primarily an attempt to follow up a line of research initiated by Laplace and Maclaurin, and extended in various directions by Roche, Lord Kelvin, Jacobi, Poincaré, and Sir G. Darwin. The main object is to build a framework of absolute mathematical truth, and the backbone of the structure is the theoretical investigation into the behaviour of rotating masses. The book contains also an account of general dynamical theory, and of the researches of Darwin, Poincaré, and others, in so far as they relate to the main problem in hand.

The Purpose of Education. An Examination of the Education Problem in the Light of Recent Psychological Research. By ST GEORGE LANE FOX PITT. Crown 8vo. 7s 6d net

A new impression of the second edition, bound in cloth. The volume contains a Preface by Professor EMILE BOUTROUX, a Reply to Critics, and an additional chapter, *Perfection as the Ideal and Lessons of the War.*

"With the main thesis advocated we are in hearty agreement, and the presentment we have found stimulating in no ordinary degree. The perusal of the book could hardly fail to be profitable to any thoughtful man or woman."—*The Times*

Seven Spiritual Songs (of Shakespeare's Time). Words and Music by THOMAS CAMPION, M.D., 1567-1620. The words edited by W. H. DRAPER, M.A.; the music arranged by WILLOUGHBY H. WILLIAMS, Organist of Leeds Parish Church.

Suitable for school choirs. A prospectus giving prices and fuller details will be sent on application.

Seventeenth Century Life in the Country Parish with special reference to local government. By ELEANOR TROTTER, M.A. Demy 8vo. With a map. 10s net

The author's object is to show how the ordinary business of government—the maintenance of justice and the preservation of law and order—was carried on during that most troubled period in the life of our race—the Seventeenth Century—and to show the working of the Parish, the powers and duties of its officials, their interaction and relation to the supervisory jurisdiction of the Church and the local Magistracy.

The Study of Ecclesiastical History To-day. An Inaugural Address by J. P. WHITNEY, Dixie Professor of Ecclesiastical History in the University of Cambridge. Crown 8vo. Paper covers. 2s 6d net

Key to Exercises on Rules for Latin Prose. By T. C. WEATHERHEAD, M.A., sometime Head Master of King's College Choir School, Cambridge. Crown 8vo. 7s 6d net

OCCASIONAL NOTES.

THE recommendation made by the Adult Education Committee of the Ministry of Reconstruction, that public museums should be placed under the control of, and be administered by, special committees of the Education Authorities, is warmly opposed by those responsible for museum administration. Can teachers approve it? Yes, with amendments. Museums can—many, indeed, already do—afford valuable assistance to teachers by expressly educational exhibits; nor is it unreasonable that the Education Authorities of a district should have some voice and some financial responsibility in determining such exhibits in the public museum. No elaborate organization is needed to ascertain from teachers in every class of school the nature of the most helpful and stimulating exhibits; nor would any Curator do other than welcome some definite machinery by which to keep in touch with those whom every Curator desires to help in every way. But to put the entire museum under direct control of the Education Authorities is short-sighted policy; and we cordially sympathize with the Museums Association and others in resisting this proposal. A museum has been defined as "a depository of natural, scientific, artistic, and literary curiosities." With the last word we are not in love; but, since "curiosity" is "a desire to know," we submit that a collection of objects which kindle this desire in the spectator extends its interests far beyond the range of education *sensu strictiori*. Every museum should afford opportunities to the specialist whose desire is to know something as yet unknown—to enlarge the sum of human knowledge by research. Such work is not for the public eye of to-day; but, if present-day education assumes supreme control over museums,

there is grave risk lest future knowledge be imperilled by the ousting and starvation of pioneer research into the unknown.

THE regulations for entrance to the Royal Air Force Cadet College have now been issued by the Air Ministry. The limits of age are seventeen and a-half to nineteen years, except in the case of those who have served with the Forces, when the upper limit is twenty-one. All applications have to be made to the Civil Service Commissioners. The subjects for the competitive examination are English, history and geography, elementary mathematics, and a modern language. These subjects are compulsory; in addition, three optional subjects may be taken, chosen from the following: a second modern language, Latin, Greek, intermediate mathematics, higher mathematics, science, and elementary engineering. Extra marks are to be granted to those who have gained Certificate A in the O.T.C., or who have served in the Forces. The terms of payment have not yet been determined, but they will be similar to those at Sandhurst and Woolwich. In fact, as will be seen, the regulations are similar to those for admission to the military colleges, except for the addition of elementary engineering as an optional subject, which was one of the subjects for the special entry to the Navy. As at the military colleges, there will be prize cadetships for those who pass high, as well as King's cadetships and honorary King's cadetships. No doubt the examinations will be held at the same time as those for the Army, which have reverted to those awkward months for schools—June and November. After many representations from the public schools, these dates had been altered to July and December, corresponding to the last months of the school term; but the authorities have gone back to the bad old dates.

ALL work which has for its aim the use of the kinema for education is deserving of warm encouragement. Daily the minds and lives of millions of our children are being influenced by moving pictures, and attempts to use this means with truly educative effect are of considerable importance to educational progress. Certain conditions must be obeyed, however, before this effect can be obtained. There was recently a demonstration of educational films at the Lewisham Hippodrome by the Quality Kinema Club. It is a pity that three thousand children were present at this show; for the directors of the club evidently have little idea of the educative process. Their demonstrator made praiseworthy, if frantic, efforts to interest the children; but a continuous display of educational films for so long a time as two and a half hours is not a lesson: it is a punishment. There are evidently few practical teachers in the Quality Kinema Club. Moreover, while the quality of the films was unexceptionable, their educational value is questionable. Films like "The Culture of Silkworms" (Gaumont) and "The Story of a Grain of Wheat" (Ford) can be of excellent educational value if the minds of the children are prepared already. Films like "Glimpses of India" (Kineto), "Life on a Rocky Shore," "The Niagara Falls" are more popular than educational, though they have their value. A film like "How to Preserve Flowers and Plants" is of doubtful value; for any teacher of botany, by making the children preserve the flowers, could do

more good. The film, "The Making of a Cheddar Cheese," was spoilt by sub-titles written in objectionable journalese which would irritate everyone having real regard for the English language.

Club Leaders. THE War has emphasized the need for clubs and recreation huts for both men and women, and the importance of the work a club leader is expected to do is widely recognized. There has been a great increase in the number of clubs, due to the formation of juvenile organization committees, civic recreation councils, and so on, and many more leaders are therefore required. Club leadership is a work which makes great demands upon its workers; a good leader will be a friend and adviser to all who frequent the club; and to be fit for this task it is necessary that he should understand something of the lives that the members lead, and the difficulties they may be called upon to face. This experience can be gained only by close contact and sympathy; but without an understanding of the social conditions of the day even these may often fail. Moreover, work of this nature is always personal. Club members should be able to discuss all the problems of life with their leader, and obtain guidance as to their solution. For the best club work both religious and social training would seem to be necessary. To provide these is the aim of the new "Religious and Social Diploma" offered by the Board for Promoting the Religious and Social Training of Club Workers. Those who obtain this diploma will have taken a course of theological study in the meaning of Christianity, with special application to social problems at the present day; and they will also have gone through a University course of social study, which will include some training on a settlement or other institution of the kind. A register of holders of certificate and diploma of the Board will be kept for the benefit both of those who have posts to offer and of those who are qualifying to fill such posts. Further information can be obtained on application to the secretary and tutor, Miss M. West, 15 Wimpole Street, Cavendish Square, London, W.1. Contributions are urgently needed and can be sent to the Secretary.

Professional Etiquette. WE have received from a correspondent a copy of a Code of Professional Etiquette for Teachers, which has been considered—and, we believe, adopted—by one of the leading teachers' associations. The Code is, we think, very ably conceived and drawn up, and, if we hesitate to print the document in full, it is not because we are in the least at variance with the object in view, but because, in our judgment, many of the provisions are already well recognized and commonly acted upon, and because we think it might be a great gain if the more debatable provisions could be considered by other associations before the Code is scattered broadcast. We strongly agree that it is the spirit and not the letter of any such Code that really matters. For example, it should unquestionably be a breach of professional etiquette not to take part in those voluntary activities (such as school games and societies) upon which a proper *esprit de corps* so much depends. But all teachers are not equally gifted either in an athletic or in a social sense, and they are not all equally young and active! Still, if the professional obligation is clearly recognized, a teacher who is deficient in these respects can generally atone for the deficiency in

other ways, so that the burden is not shifted entirely to the willing shoulders. For the sake of young teachers, and for the purpose of bringing pressure to bear upon obvious offenders, a generally accepted Code would undoubtedly be a gain.

Unity in the Profession. IN a recent issue, *The London Teacher*, whilst upholding the unity of the teaching profession at large, enters a strong plea for the unity of the profession in the London area. London teachers may well insist, for example, that, having regard to the cost of living and the complexity of London social life, the payment of equal salaries to teachers all over the country would result in the London teacher being the worst paid member of the profession. We think, indeed, that, in arguing a good case, our contemporary falls into a confusion as regards a national service and centralized administration of that service. In recent times our educational system has become more and more nationalized, whilst its administration has become more and more decentralized. The Central Authority does well to take the lead in trying to end the present chaos as regards salary scales; but it is the business of the Local Authorities, and of the teachers in the several areas, to prevent an unfair uniformity being imposed from above. The London Education Committee recently reported, not without reason, that the difficulty of making proposals was enhanced by the divided counsels of the teachers themselves. Such division, quite rightly, as it seems to us, our contemporary is anxious to overcome.

The Supply of Teachers. REGARDING the supply of teachers, the recent circular of the Board of Education again directs attention to the outstanding fact that, in several districts containing a large population, the Local Education Authorities draw the main part of their staffs of teachers from outside their areas. The worst offenders appear to be London and the county boroughs, borough and urban districts on the London border, Lancashire and Cheshire, and Birmingham and its neighbourhood. Without allowing for growth of population or improvements in staffing, it is estimated that the number of intending teachers contributed by each area should represent 6 per cent. of the number of teachers employed. In the metropolitan districts during the past three years the average number of intending teachers has been under 2 per cent. The Midlands, taken as a whole, are below the standard, and the lowest figures of all are found in the administrative county of Cheshire, where during the past seven years the number of intending teachers has fluctuated from year to year between 1 per cent. and 2 per cent. We referred last month to the primary cause of the falling off in the supply, but if in some parts of the country (notably in the north of England) "the position is less discouraging," it should not be difficult for similar results to be secured elsewhere. We can look forward with some confidence to the time when the material prospects associated with the occupation of teaching will be sufficiently advantageous to maintain the supply of practitioners without artificial stimulus. If, however, the Board is correct in believing the position to be "very critical," and that "the future to which the Education Act of 1918 looked forward is in grave peril," it might be advisable for the Board, as a temporary measure, to

extend further the arrangements now made for the training of pupil-teachers in country schools.

THE new statutory provisions regarding the employment of children will, it is anticipated, come into operation at the beginning of the New Year. A child means a person under the age of fourteen, and employment means any labour exercised by way of trade, or for gain, either by the child or by any other person. A child under the age of twelve years must not be employed in any capacity. Unless by-laws are made, and approved, to vary the statutory provision, a child of twelve years and upwards must not be employed on any Sunday for more than two hours, or on any day in which he is required to attend school before the close of school hours or after 8 o'clock in the evening. Local Education Authorities will be urged, no doubt, to make a by-law in the interests of newsagents and vendors of milk to enable children to be employed before school hours. The Home Office state, however, that much evidence has accumulated as to the ill effects of the employment of children before school. The children, it is said, often arrive late: are tired, sleepy, and unfit to profit by their education. They get wet in the course of their employment, and are unable to change their clothes; frequently they have insufficient time for breakfast.

IF the system of education in the City and County of Newcastle-upon-Tyne is not all that it ought to be, it is not owing to lack of expert advice and direction. More than twenty years ago Sir Joshua Fitch reported upon the provision of technical education, and later Sir M. E. Sadler prepared an illuminating review on the general question of education other than elementary; the city has also had the advice of three Directors of Education, who have each shed new light on old problems and passed on. Mr. Percival Sharp, who has recently relinquished his appointment in Newcastle-upon-Tyne in favour of Sheffield, has written for the Committee and his successor "A Survey of the Educational System," with constructive recommendations for its improvement. It is a discriminating and useful document, and, as the writer says in his conclusion, outlines a policy which, if carried out, would be of incalculable benefit to hundreds of thousands of lives yet to come. While it is perhaps in accordance with the ideas of enthusiasts for reconstruction to prepare their plans and ask the public to adopt them regardless of the cost, we have no doubt that so efficient an administrator as Mr. Sharp must have formed some estimate of the financial bearing of his proposals, and we think the value of his report would have been increased if he had included it.

ONE of the main defects in the elementary-school system of the city of Newcastle-upon-Tyne, in Mr. Sharp's view, is the size of the classes. Of 917 classes, only 110 are of forty children or less, and his first constructive suggestion is to urge that at an early date no class should consist of more than fifty children; that the provision of school accommodation should continue without interruption until classes are reduced to a maximum of forty-five, and subsequently to a maximum of forty children. This reform would involve an immediate addition of about

5,000 school places, and an ultimate addition of 10,000. Mr. Sharp is not in favour of providing advanced and practical instruction by means of special classes for the tops of elementary schools. He would arrange for every elementary school to be preparatory, and for the normal child to leave about the age of twelve and pass to a secondary school, junior day technical school, or central elementary school. It is not possible, within the limits of a paragraph, to refer in detail to Mr. Sharp's well considered recommendations for improving the educational service of the city. His observations regarding continuation schools are specially worthy of attention, and we entirely agree with his views. His remarks on the training of teachers are also well informed and wise. His plea for the establishment of a University for Newcastle not dependent on, or hampered by, the alliance with an older institution, is a matter upon which we may reserve comments for a future occasion.

THE Education Committee for Kent has adopted an elaborate administrative system with a view to educational reconstruction. The county has been divided into fourteen districts, each with its Education Officer and staff. The scheme for one of the districts, printed in a recent report, provides for the appointment of a Board of thirty-two members, upon which all sorts and conditions of interests are represented. The duties of the Board are comprehensive. It has to provide an effective local administration for the purpose of all forms of education; to co-ordinate the curriculum in elementary, secondary, and continuation schools; to report on the adequacy of school accommodation and teaching staffs; to select children from elementary for central schools and special classes; to supervise generally the working of all schools and institutions; to deal with school attendance; care and after-care; medical inspection and treatment, and direct arrangements under the Choice of Employment Act. It is an experiment which will be watched with interest. On paper the scheme appears to be elaborate and, administratively, costly; and many of the districts, from the viewpoint of education other than elementary, are too small.

CIVIC EDUCATION LEAGUE.—During the current year negotiations have been in progress for an amalgamation of the Schools Personal Service Association and the Civic and Moral Education League. During the five years that the former association was in existence its work in connexion with social education increased beyond the limit of voluntary effort. A gradual drawing together of the two societies, both in regard to object and by cross membership, indicated that a more economical and energetic propaganda could be conducted by joining forces. The negotiations reached a successful conclusion at a meeting of members of the two associations on September 30 last, when a constitution was adopted for the amalgamated society. The new organization will be known as the "Civic Education League: a League for Education in Service and Citizenship." A provisional committee was appointed, and as soon as a permanent secretary has been secured it is hoped to institute an active research and propaganda campaign. During the War nothing has been more noticeable in education than the focussing of attention upon its social aspects. Upon teachers, more perhaps than upon any one else, rests the responsibility of laying the foundations of social betterment and building a united nation, free from the bitterness of class rivalry and industrial unrest. To this end, the new society seeks means to secure a wider and deeper fellowship, an extension of knowledge of social life and institutions, and training for practical community service. Teachers and others interested in education who feel the urgency of this problem are invited to apply for membership to the Secretary, Civic Education League, 11 Tavistock Square, London, W.C.1.

FUNDAMENTAL PRINCIPLES OF EDUCATION: THE LITERARY ASPECT.*

By F. S. PRESTON, Head Master of Malvern College.

A TEACHER by profession is slow to pose to others as a theorist. This is not merely an instinct, nor the well grounded fear of incurring the deeply rooted suspicion of most teachers. Every teacher is aware that the brain of the child is too variable a quantity to be included in any rigid formula without introducing too many other variants; and, partly from professional pride, he declines to believe that he should ever allow himself to be bound mechanically by any formulae in dealing with the individual child. Anyone can dogmatize as to the objects of a general education. In my opinion, the chief object is not to acquire knowledge, as this alone will not produce the healthy mind; neither is it only to acquire character, a much lauded and worthy object in education, but attained in the past sometimes at the expense of the trained mind; still less is it to provide a man with something of value to him in pounds, shillings, and pence—a marketable asset commercially.

The attempt to estimate the value of anyone's education in terms of examination successes is equally fallacious. There must needs be professions where the qualifications of the individual can only be estimated in this way, e.g. the law and medicine; it is noteworthy that in both these instances the examination tests are spread over a period of five to seven years, and demand a prolonged and careful specialization, and the tests themselves are qualifying and non-competitive in character. If you wish to kill learning for learning's sake you have only to develop further the complicated and irrational system of examinations demanded of the English student; and this would still be true if all examiners were ideal and broadminded and every syllabus were conceived in the same spirit. In my own experience there are few examination tests demanded of the student in this country who is of average or rather less than average ability that do not call for considerable practice in what is euphemistically described as "the style of paper."

Naturally I speak of tests in literary and kindred subjects: of scientific tests I speak only from rumour in one or two cases. The result is often the substitution of the "dry bones of knowledge" for the broader spirit of the subject, and the cramping of the student's own powers of self-expression in the interests of an artificial, if more orthodox, examination style. What, then, should be the first object of a wide and general education? Is it not to produce the trained mind essential to a full member of a civilized community? Such a member will be able both to give to and to receive from the other members of that community, and this power of reception, too often ignored, is essential to full development: without it, man remains narrow and selfish, a far less influential citizen.

In saying this I am not proposing to enter upon a wild attack on the narrowness of scientific studies. I am no linguistic fanatic, nor am I desirous of "subordinating progress and the future to the realms of ghosts and nursery tales." The claims of scientific studies are duly recognized by all theorists on education, and, more recently, have been warmly advocated by the "man in the street." The cause of linguistic studies needs no defence except against the fanatic. The independence of the two is now confidently asserted, and it only remains to adjust the concessions each should make to the other.

The present situation is critical, and any further delay, except such as is required for experiment, in adjusting the respective claims of literary and scientific studies would be dangerous. Five reasons may be adduced for this—viz., (1) the importance of the growth of the cosmopolitan ideas of brotherhood, (2) the general ignorance of economics intensified often by a com-

plete ignorance of the lessons of history, (3) the demands of the new Education Acts for extending the educational facilities of the majority of the population in these islands, (4) the increase in the leisure time now available to that section of society which has been provided with less education in the past, (5) the degenerate standard of modern British taste—these must be admitted by all save the blind optimist, as shown in current literature and the theatre.

In the first of these it might be claimed that by no form of study so much as in scientific research can mankind be more readily induced to ignore the barriers of nationality or language. But any real spirit of mutual goodwill between our own and other nations must largely depend on our knowledge of the literature and history of other countries. Both these are again dependent on our knowledge of the language of other countries. I cannot believe that any man of science would support the suggestion that the student should have recourse to any but first-hand authorities. This may be an ideal, but it is an ideal that should be less uncommon in the future, and particularly important in the study of history. I do not plead for the so-called scientific method of history study: minute accuracy of fact in a historical author has less weight with me than breadth of imagination; and, to appreciate such an author, a translation of his works is not the best medium.

It is on history and its lessons that I would lay a special stress. I have seen it suggested that we are handicapped in competition with the United States of America by our undue subservience to our historical past: they look forward, we look back. This regard for our historical position has given Great Britain ballast in the past, and, if the future is to those who ignore all tradition or have little tradition to ignore, then we are handicapped. I dispute the premise. If one looks out on the world to-day, I think tradition may be our salvation, and ignorance of the lessons of history our undoing.

There is a large and growing demand for higher education in this country: the State has intervened and would seek to supply that demand, and in addition the majority of the adult population have secured for themselves hours of leisure denied to them before in their industrial life: soon practically no industrial worker in this country will be claimed by his daily work after five o'clock in the afternoon, in any day of the week, and never between noon on Saturday and Monday morning. This thought causes one to turn to the forms of recreation of mind that are offered in this country: little comfort can there be found. From causes as widely apart as the reaction from the strain of war and the poverty of intellectual outlook fostered by our past elementary education, one finds a pabulum that betrays a wholly degenerate standard of taste and appreciation. A nation has the art and literature it deserves: can the present degenerate standard be raised by any means other than fostering a higher literary appreciation in all sections of the community by gradual, if slow, processes? Is there any other substitute? "The mind grows by that on which it feeds." No man will resent what is vulgar or ugly in art unless he has formed for himself his standard of the beautiful and the true. Science can unfold both the beauty and the truth in nature, but this I would suggest would be a slow and almost impracticable method of elevating public taste, if unsupported by the study of the finest works of art and literature.

I am not digressing far from my theme if I touch lightly at this point on the study of what has been called in the narrower sense "the humanities." I do not wish to cover ground trampled over year after year by hordes of persecutors threatening vengeance and slaughter against the trembling champion of the classics. Be it said at once that I admit the limited and emasculated study of Greek, only surviving by "compulsion" in one University matriculation, to be a futile survival; let me admit that the higher study of the Greek language would appear to be "caviare to the general"—I will not borrow my image from the Gospel phraseology. That is not to admit that the past has not in this case a "pearl of great price" to offer, which it would be futile for us, with our ideals and our love of freedom, beauty, and truth, to neglect.

* From a paper read before the Educational Science Section of the British Association at Bournemouth on September 12.

I have preached in my humble way against "compulsory Greek" as strenuously as anyone; I shall go on as humbly and as strenuously to preach against "compulsory science" in any similar examinations.

The only thing that overcame my diffidence in accepting the invitation to give this address was a desire to push the claims for consideration of that most uncertain of quantities, "the average boy." This phrase in the mouth of the educationist means something very different from what it means in that of a schoolmaster. The Head Master of Winchester or of Rugby sees "the average boy" only rarely, and by some mistake. He is a very humble individual intellectually, almost drab; he has definite instincts, strong prejudices, slight ambitions, a few interests, and little reasoning power. At once we fasten on his main hope of intellectual salvation, and try to define what I have called "a few interests." I sometimes think that it is this outward show of "interests" that has deluded those who advocate a system of education in which scientific and manual training are given a preponderating part to play. They are apt to mistake such a phenomenon as a somewhat primitive mechanical interest for a sincere scientific enthusiasm. I once asked the ten idlest boys under my charge what they intended to be in life: two wished to be aviators, the other eight to be engineers. The motive was the same in all cases: a desire to seek excitement and avoid monotony, combined with the infant's curiosity "to see the wheels go round." It would be as true to ascribe to such boys a real scientific spirit as to claim for the young poacher an undiluted enthusiasm for ornithology. There is a substratum of genuine interest in Nature's laws in both cases: it will carry us some distance, but not very far. Further, in the young student, so long as elementary science is a relief from literary study, the chance is valued and more eagerly taken; if too much stress is laid on the subject, and the nightmare of "compulsory science" is over every hour of elementary study, then the reaction may come. The enthusiasm is noticeable now in a good percentage of our pupils; it will not be increased by any arbitrary pressure, and we have yet to see the effect of the wider science-class teaching that must of necessity be now introduced into our schools. This, to an extent which perhaps only the teacher can appreciate, may be fatal to the growth of many a young enthusiasm. The young student finds the heuristic method of scientific instruction attractive; this does not mean that he is a born collaborator of a Faraday, a Kelvin, or a Ramsay.

Thus far I have pleaded for an education that would produce a trained mind, postulating that the present crisis demands a prompt solution on the lines of a compromise between scientific and literary studies, and, by inference, questioning the capacity of the child to profit by a form of education that was preponderantly scientific. To my mind, modern secondary education exhibits a reasonable division of the curriculum between scientific and other studies. Where this is not the case, it is more often due to an unavoidable delay in the process of transition from the older to the new than to any ill will towards scientific studies.

If science is to be accepted at an early stage as an integral part of a general education, it must also be conceded that scientific teaching is wasted on those who, after a reasonable period, fail to show any aptitude for such studies. It is idle to pretend that science makes the same appeal to all, and it is often not recognized that the laboratory may be to some as tedious as is the literary class to another. I would appeal therefore for the wide outlook in the teacher and once more in the examiner. An elementary course in general science should be capable of assimilation with reasonable industry by the average boy in such a proportion of school working hours as will not rob him of adequate instruction in at least five other subjects. Of 750 students who took the physics and chemistry combined paper in the last School Certificate Examination of the Joint Board, 450 failed to pass with credit, the only kind of "pass" of examination value. I select this paper rather than the other science papers, as it is presumably meant for "literary" candidates who do not intend to pursue science further, and whose scientific education should be as wide and humanized as possible. It is fair

to assume that most of these candidates have given four hours a week for three years to their preparation, apart from any grounding in Nature study and practical measurements. The task is beyond them apparently. It is not encouraging to those who, in face of some opposition, would adapt their curriculum so as to include a general elementary science course for all.

It may be suggested that the time allowed for science is inadequate, and, as the subject is all important, other subjects must be sacrificed. I would maintain that this is impossible if the young are to be adequately grounded in mathematics, English language and literature, modern history, scientific geography, French and one other language. These subjects are all required and are indispensable. Is not the solution that in science the teacher should be expected only to lead the young pupil gently to a point where he may begin to realize that there is a glorious wonderland beyond instead of leaving him under the impression that science is the region of formulae and test tubes? Then, if the student shows any appreciation combined with aptitude, he will take readily to advanced studies and in time to research. If, like myself, he fails in his youth to see the "vision splendid," let him be consigned to the tender mercies of the literary fanatic or the linguist. He will have acquired a "smattering" of elementary science, all he can assimilate with profit. This presupposes that in any case the grounding in linguistic studies has been as careful as in scientific, and in no case interrupted.

The teaching of languages has in recent years been raised in standard enormously; but the methods demand that there shall be at no point any serious gap in the language course. The same holds true of history, whether English or European, and still more of the study of English language and literature. Criticism has been levelled freely at the inadequate teaching of the mother-tongue, and I have heard one of our most distinguished men of science himself declare that the first thing he demanded of a student was the ability to express himself easily and grammatically in his own language, but he was generally disappointed.

There is one kind of criticism levelled at the modern school curriculum with its compromise between the claims of mathematics and science on the one hand, and of languages and literature on the other, which has been much heard of late. There are those who plead for the more specialized school training which we may fairly describe as "vocational," and unfairly as "useful." From the civic point of view I should call it "the useless or bread-and-butter training." It makes a special appeal to the manufacturer, whose views are not disinterested. If one estimates the duration of a man's life and the length of his educational career, how much of the latter should he be reasonably allowed to give to his future vocational needs? If my life is to be spent amongst machinery all my working days, I imagine that, given a general education of a reasonable character (which we must remember will no longer cease at fourteen in the elementary school), I shall soon require an understanding of that machinery with which I am called upon to occupy myself. How I shall fill my leisure hours, it is not easy to answer, but it is a question that seriously affects my fellow-citizens. There is a minority in the world whose daily occupation engrosses all their thoughts even in hours of leisure: the rest of mankind put it aside when their working hours are over.

It is of as much importance to the community how a man spends his leisure as how he does his work. Education does not affect the latter as much as it does the former. A man's culture is best studied at his own fireside. If we allow the imagination of the young to be starved or to become one-sided by too material or too specialized an education, we shall breed that spirit of discontent which thrives wherever success is the only god and money the only standard. Imagination must be developed and the reasoning power must be developed: without these, skill of hand or knowledge of facts is useless, and neither imagination nor reason is complete alone. It might be urged that a scientific training provides both: we need not argue the point, but it may be assumed that such a scientific training as is thereby implied

can never be practicable at first hand for the whole or even a fraction of our population. There is an alternative. The highest education is association with great minds: and through art and literature the mind of man can come in contact with all that is best in the world's thought. Let me give one brief illustration. To appreciate thoroughly the biography of any of the scientific giants of the past would require a man to have a literary and historical appreciation as well as some elementary scientific knowledge.

Claims of scientific and literary studies must be reconciled. A wise compromise is essential and desirable. To the school-master there is something of as high a value as the development of imagination and reason—viz. the development of the moral faculties. This is a civic need, and no educational system without it is complete. It also corresponds to a natural craving in man to comprehend "all mysteries" as well as "all knowledge." If education were in any degree limited to the pursuit of the finite or demonstrable truths, it would not satisfy man's spiritual needs; it would be a modern secular education of the most barren kind, such an education as under our auspices has produced in Egypt men who (in the words of a recent writer) "are full of belief in their own intellectual powers, make no distinction between capacity for intellectual understanding and the ability to use their knowledge, and are not conscious of any defects of character."

For what, then, do I plead? A general educational course in English, French, applied mathematics, elementary science (including Nature-study and geography), history, and, for all who can profit by it, Latin, for its linguistic importance; progress to be noted by other means than competitive or external examinations; the teacher to be more carefully tested than the taught; the ideal to be the discovery of special aptitude, so that the student may become later the best educated and most valuable of citizens, a master of his own subject and an "interested smatterer" in other subjects; and, lastly, for our educational system to be regulated with an eye first to the younger student and the average child, in such a regulation the practical teacher to be an active consultant. The needs of the advanced student are in comparison a very simple problem.

PERSONAL PARAGRAPHS.

IN the election of Mr. Balfour as Chancellor of Cambridge University, in succession to his brother-in-law, the late Lord Rayleigh, the University pays a distinguished tribute to the executive ability, the intellectual attainments, and the long record of public work possessed by one who is, to quote Mr. Asquith, "by universal consent the most distinguished member of the greatest deliberative assembly in the world." Mr. Balfour was Lord Rector of St. Andrews in 1886, of Glasgow in 1890, and he has been Chancellor of Edinburgh University since 1891.

It is reported that Sir Bertram Windle contemplates resigning from the presidency of University College, Cork, in order to devote himself to literary work. Sir Bertram is one of Ireland's most eminent scholars, and he has taken an important part in all matters concerning the education of the country. In particular he is a zealous advocate for the Cork University Schemes, maintaining that the present federated University constitution is difficult in administration and not productive of results commensurate with the energy of effort involved. He is a Fellow of the Royal Society, a Fellow of the Society of Antiquaries, a member of the Royal Irish Academy, and he was one of the Government nominees on the 1917 Irish Convention. As Dr. Windle, he was Dean of the Medical Faculty at Birmingham, and he is well known as the author of "The Wessex of Thomas Hardy" and other works.

FORTY-TWO years as the head master of one school is a record of which to be proud. It belongs to Mr. Frederick Andrews, who has held this position at Ackworth School, Yorkshire, since 1877. The school, for boys and girls of the Society of Friends, was founded in 1779, by Dr. Fothergill, a famous Quaker physician. Amongst the names on the long roll of Mr. Andrews's past pupils are found Mr. E. V. Lucas, "John o' London" (Mr. Wilfred Whitten), and many others well known to the Society. Throughout his long career Mr. Andrews has been one of the keenest workers for the cause of education in the Society of Friends. His activities, however, have not been confined to educational spheres. He has been a great cricketer in his time, chairman of the local Liberal Association, a J.P., and clerk to the Meeting for Sufferings and the Friends' Executive Committee. Mr. Andrews is to be succeeded next year by Mr. G. K. Hibbert, who has been Principal of the Swarthmore non-residential Working Men's Settlement, Leeds, since its foundation in 1909. Educationists will have the opportunity of watching an interesting experiment, the adaptation of some of the methods which have proved successful in adult education to the requirements of school pupils.

MR. J. R. TAYLOR has been appointed to the newly created post of director of humanistic studies in the Huddersfield Technical College. Mr. Taylor is a graduate of the University of Edinburgh, and for several years has occupied the position of lecturer to University Tutorial classes under the University of Leeds.

THE new Vice-Chancellor of Cambridge, Dr. Peter Giles, the Master of Emmanuel, has had a long experience in University work and administration. For twenty years he was a lecturer and college officer at Emmanuel, before he was elected Master in 1911, and for twenty-eight years he has been University Reader in Comparative Philology. A member of the Council of the Senate for several years, he acted as Deputy Vice-Chancellor, with the President of Queens', during last year. His popularity was evidenced by his reception at the installation proceedings on October 1 last.

THE excellent address given by the outgoing Vice-Chancellor, Dr. Shipley, Master of Christ's College, affords a clear insight into the financial and administrative difficulties of the University. Though recording gifts amounting to considerably over a quarter of a million of money earmarked for specific objects, it yet points out the necessity for the increase in fees, for the provision of a pension fund, and for the application for State aid. Fitting reference is made to the valuable help given by Cambridge in the defence of the country, and to the grievous losses amongst "Members of the Electoral Roll." A strong appeal is also made to the younger members of the University to come forward and take an active part in its administration. Dr. Shipley's address, following that of Dr. Napier Shaw's, at the British Association Meeting, on "Educational Ideals and the Older Universities," raises hopes that simplification in administration will not be overlooked during the present reconstruction period.

DR. J. H. E. CREES is retiring from the head-mastership of the Crypt Grammar School, Gloucester, at the end of the present term. During his nine years of office the school has gained recognition as a public school, it has almost doubled in numbers, and nineteen scholarships have been gained at Oxford and Cambridge.

CAPTAIN H. POCHIN, M.C., principal of the Sutton Coldfield Grammar School since 1912, has been appointed head master of Dartford Grammar School. Captain Pochin was educated at the Liverpool Institute, Newton Abbot Grammar School, and Selwyn College, Cambridge, and obtained a second class in the Natural Science Tripos 1905. He has had considerable teaching experience at Berkhamsted and Wolverhampton, and has been on military service throughout the

War. He rose to the rank of acting major, and for some months commanded a battalion in the field. He was awarded the Military Cross in 1917.

* * *

THE Governors of King Edward VII Grammar School, King's Lynn, have appointed Mr. C. J. L. Wagstaff as head master in succession to the Rev. W. Boyce, who is retiring after thirty years' service. Mr. Wagstaff is an old pupil of Macclesfield Grammar School and a Scholar of Emmanuel College, Cambridge. He was 16th Wrangler in 1897, and obtained a First Class Nat. Sci. 1898. Formerly occupying assistant masterships at Bradford and Oundle, he has been head master at Haberdashers' Aske's Hampstead School since 1912. He is the author of well known textbooks of science for schools.

* * *

AMONG the many changes on the staff at Rugby, we note the appointment of Major E. R. Thomas as head of the science department, in succession to Mr. H. P. Highton, and the resignation of Major H. H. Hardy, following his acceptance of the head-mastership of Cheltenham College. Dr. O. H. Prior, who has been in charge of the physical training at the school for the last five years, is also leaving to take up a French Professorship at Cambridge; his successor is to be Commander Street, from the Royal Naval Barracks, Portsmouth.

* * *

THE REV. DR. H. LANSDSELL, whose death is reported, was the son of Mr. H. Lansdell, formerly head master of Uckfield Grammar School. He was one of the most famous of modern missionaries, and a renowned traveller. From 1892 to 1912 Dr. Lansdell was Chaplain of Morden College, Blackheath.

* * *

THE death is announced of Mr. A. O. Maberley, leader of the Chancery Bar at Manchester and Chairman of the Governors of Manchester Grammar School. Before joining the Bar, Mr. Maberley was an assistant master at Manchester and Rossall.

ONLOOKER.

TOPICS AND EVENTS.

PARENTS' NATIONAL EDUCATIONAL UNION.—The programme arranged by the London Branch of the Union for the present term includes the following lectures:—On November 19, at 3.15 p.m. at 8, Kensington Palace Gardens, W. 2, "The New Spirit in Education," by Mr. J. M. Mactavish, of the Workers' Educational Association; and on December 9, at 8.30 p.m. at 50 Porchester Terrace, Hyde Park, London, W. 2, "The Use and Abuse of Psychoanalysis in Education," by Dr. William Brown.

THE CHILD-STUDY SOCIETY.—Meetings of this Society will be held at the Royal Sanitary Institute, 90 Buckingham Palace Road, London, S.W. 1, at 6 p.m., on November 6, when Mr. O. A. Minns will speak on "How to make 'English' live in the Child-mind"; on November 20, when Dr. D. Forsyth will lecture on "The Pre-School Child"; and on December 4, when the Rev. Dr. W. F. Cobb will give an address on "Religion in Education."

CONFERENCE OF EDUCATIONAL ASSOCIATIONS.—University College, Gower Street, London, has again been secured by the Conference Committee as the place for the meeting of Educational Associations. The Conference will open on December 31, 1919, and continue until January 10, 1920. Mr. Fisher, President of the Board of Education, has promised to deliver the inaugural address on the afternoon of December 31.

ANGLO-BELGIAN UNION.—To further the knowledge of Belgian life in Great Britain and of British life in Belgium, the Anglo-Belgian Union has enlisted the support of several distinguished Englishmen and Belgians who are prepared to lecture in English or French before the members of institutions or educational bodies which the scheme may interest. The lectures cover a wide range of subjects from early history to present conditions, including literature and art. Over seventy lectures were given last year. For further particulars apply: Educational Sub-Committee, Anglo-Belgian Union, 35 Albemarle Street, London, W. 1.

HIGHER EDUCATION FOR ALL.—The President of the Board of Education has appointed a Departmental Committee to inquire into the working of the existing arrangements (a) for the award by Local Education Authorities of scholarships tenable at secondary schools or institutions of higher education other than Universities or institutions for the training of teachers; (b) for the provision of free places in secondary schools under the Regulations of the Board of Education. The members of the Committee are: Lieut.-Commander E. Hilton Young (Chairman), Mr. E. K. Chambers, C.B., Mr. R. F. Cholmeley, Sir Mark Collet, Miss E. R. Conway, Miss P. Fawcett, Mr. F. W. Goldstone, Mr. H. J. Hallam, Mr. R. T. Jones, Mr. J. Murray, Major W. G. A. Ormsby-Gore, Mr. C. J. Phillips, Mr. T. J. Rees, Mr. R. Richardson, Miss B. M. Sparks, with Mr. H. E. Mann as Secretary.

EUGENICS EDUCATION SOCIETY.—The Permanent International Eugenics Committee was to have met at Brussels, on August 5, 1914, to consider the arrangements for an International Congress of Eugenics in the United States. Needless to say, the meetings did not take place. The same subject was discussed at a recent meeting of the International Committee held at the rooms of the Royal Society, when arrangements were discussed for a Eugenic Congress to be held next year in New York. Seven years have elapsed since the holding of the first International Eugenic Congress in London, and during this interval the war has brought the importance of eugenic problems in a forceful manner on the attention of the public. The need is still for more knowledge and for a wider appreciation of the facts already known. The Congress will be practical in its aims, and will help to establish a well-considered eugenic policy based on solid foundations. The address of the Eugenic Society in England is 11 Lincoln's Inn Fields, W.C. 2.

OXFORD SUMMER SCHOOL, 1919.—The Oxford Summer School of Education provides for the treatment of the teaching of all the usual school subjects in a course of one month. In this respect it is unique, and would appear to be one of the few complete refresher courses at present conducted on the right lines. The specialist is catered for by an arrangement whereby two related subjects are treated in each week, and their place in the general educational scheme allotted. The teaching of the school subjects is dealt with by specialists whose views are harmonious. A more stimulating refresher course in general theory than is provided by Dr. Keatinge's lectures it would be impossible to imagine. The selection of lecturers this year was a happy one, and included Profs. Ripman and Nunn, of London, Mr. W. L. Bunting (geography), Mr. F. S. Marvin (history), Miss Burstall, Miss I. M. Drummond (biological science), Dr. Rouse and Mr. Caldwell Cook (of the Perse School), Mr. Kirkman and Mr. E. A. Peers (modern languages), Miss Barron (phonetics), Mr. Clarke (mathematics), Mr. P. Simpson (English), Dr. Westlake, Miss Frodsham (Continuation Schools), and Miss Rendel, of the Caldecott Community. Attendance for the full month constituted a residential qualification for the Oxford Diploma in Education.

AID FOR APPRENTICES.—The Training Department of the Ministry of Labour has issued a new regulation in connexion with the scheme under which State assistance is given to apprentices who have served in the war on returning to complete their apprenticeships. In the case of approved schemes, where an apprentice had resumed his training on or before September 1, an application to come under the scheme must have been made before November 1; otherwise retrospective payment of the amount of State assistance cannot be claimed for a longer period than two months. Where an apprentice resumed his training after September 1, an application must have been made within two months of his resuming his training; otherwise retrospective payment of the amount of State assistance cannot be claimed for a longer period than two months. In the case of schemes approved after September 1, where an apprentice has resumed his training on or before the date of issue of the scheme, an application to come under the scheme must be made within two months of such date of issue; otherwise retrospective payment of the amount of State assistance cannot be claimed for a longer period than two months. Where an apprentice has resumed his training after the date of issue of the scheme, an application to come under the scheme must be made within two months of his resuming training. Schemes have now been issued in thirty-three trades, and particulars can be obtained at any Employment Exchange.

THE SALARIES OF ELEMENTARY SCHOOL TEACHERS.—A special convention of members of the National Union of Teachers

was held at Birmingham on October 11, and was attended by representatives from all parts of the country. Mr. S. Taylor, of Walsall, the Chairman, said the meeting represented a spontaneous outburst of alarm, protest, appeal, and warning. The first findings of the Joint Standing Committee formed to deal with the problem of salaries had caused deep depression. He appealed to the Prime Minister and to Mr. Fisher to lay before Parliament a fair comparison between the teachers and the Second Division clerks of the Civil Service with regard to the length and expense of training, the physical and mental strain involved, and the onerous character of their responsibilities. He believed that Parliament would have sufficient sense of justice to remove once and for all the invidious distinction entailed by such a comparison. The Government had, he said, recognized by the recent award to railwaymen that 100 per cent. was the least addition that could be given on pre-war salaries and wages, but teachers had had to submit to increases of from 10 to 50 per cent. If the Joint Standing Committee offered a minimum of less than £200, the whole profession would, he felt sure, be up in arms. A resolution was passed calling upon the Executive to insist on the report of the Joint Standing Committee on a provisional minimum scale and carry-over being submitted to a specially convened conference for consideration and decision within one month of the drawing up of the report.

UNION OF LANCASHIRE AND CHESHIRE INSTITUTES.—The report of the Council for the year 1919, which is now available, shows that the number of Institutes in the Union at the present time is 193, as compared with 187 in 1918. The classes organized by the several institutes were attended by some 117,219 evening and 8,924 day students. The number of individual evening students in 1914 was 144,554, and this number decreased during the war to 107,392 in 1917. During the year the several advisory committees have carefully considered the curricula and syllabuses of the various subjects, and modifications have been introduced designed to meet new needs of the students. The audited statement of income and expenditure in respect of the general work of the Union shows that the total income was £5,491, with expenditure amounting to £5,192. The outstanding feature of the year's work is the bringing into full operation of the agreement with the Board of Education to secure a thoroughly efficient scheme of examinations. Every interested group of educationists can now exert

an influence in framing the curriculum, in setting the questions, and in estimating the results.

MATHEMATICS IN AMERICA.—The General Education Board, founded by Mr. J. D. Rockefeller "to promote education within the United States, without distinction of race, sex, or creed," have made a grant of 16,000 dollars to the National Committee on Mathematical Requirements appointed by the National Mathematical Association of America for the purpose of undertaking a study looking to improvements in the mathematical curriculum of the secondary schools of the country. Mathematicians, as well as educators in general, have in recent years criticized the prevailing high-school work in mathematics on the ground that much of the material is of little practical value, and on the further ground that the high-school curriculum in mathematics takes too little account of modern developments in this science. The American Mathematical Association is made up of the leading professors and teachers of mathematics in American colleges and Universities. It has appointed, to conduct the inquiry, a committee composed of four University professors of mathematics and four secondary-school teachers of mathematics. Having no funds, this body applied to the General Education Board for assistance. The Board will not take any part in the study, or make recommendations.

PRIMARY SCHOOL NOTES.

The Standing Joint Committee on Salaries.

THERE is a growing conviction among teachers that the National Joint Committee on Teachers' Salaries, in merely considering the formulation of a national minimum scale, are not likely to arrive at any satisfactory immediate solution of the existing difficulty. The Departmental Committee on Teachers' Salaries largely failed because they did little or nothing beyond laying down certain principles which ought to govern the application of scales of salaries generally. The present Committee seek to enunciate a scheme embodying these general principles in the form of a scale which shall have national application. Should this scale be at least equivalent to

(Continued on page 734.)

Train the "Tutorial" way— and have your studies directed by the best professional and teaching talent in Britain.

The Tutorial College is recognized by educationists, and also by University, Professional, and Commercial Authorities to be the best staffed, best organized, and best directed institution of its kind. The staff is a Board of Specialists, always available for expert advice. Into their service is put their whole energy and outstanding ability—that you may succeed.

If you mean to carry everything before you at any of the following Examinations, seize this opportunity to-day.

Army and Navy Exams.
Oxford and Cambridge Locals.

METHUEN & CO., LTD., 36 ESSEX STREET, LONDON, W.C. 2

those already in operation in the schools of the most progressive Education Authorities, there would be a substantial prospect of a settlement of the existing ferment among teachers; but it is now being realized that the Committee may adopt a scale substantially less than the best which are now being paid, leaving it to each Local Education Authority to supplement the national scale at will. In other words, differential rates of payment with differential rates of superannuation allowance would be paid to teachers who are doing exactly the same work. Under such a system the better paying areas would attract the best teachers, while those which paid the national minimum would not only be cut off from a satisfactory supply of recruits, but would be served by the inferior teaching grades. It is significant that the Cheltenham Conference of the National Union of Teachers decisively rejected a proposal to sanction differential scales of salaries for teachers of similar qualifications working in various areas.

National Federation of Class Teachers.

At the Annual Conference of the National Federation of Class Teachers, held at Liverpool, the new President, Mr. G. D. Bell, of London, emphasized the necessity of unity among teachers; and in this connexion he advised the setting up of Whitley Committees and the representation of teachers on all Education Committees. He expressed confidence in a satisfactory settlement of the salaries controversy, provided that the Board of Education would insist upon laggard authorities carrying out the decisions of the Joint Committee. Resolutions were passed in favour of the wider application of free education, with an adequate provision of maintenance grants, reduction in the size of classes to thirty on the roll, an extension of the system of school medical examination and medical treatment, and that children above the age of nine should be taught by teachers of their own sex. The Secretary, Mr. J. H. Lumby, reported a membership of 22,500, showing an increase of 2,036 upon last year.

The Birmingham Convention.

THE Convention of delegates from 125 Local Associations and representing 40,000 members of the National Union of Teachers may be regarded in part as the legacy of mistrust left by the ineptitude of the findings of the Departmental Report on Salaries,

and in part by the action of the Executive of the Union in suspending definite action in cases of salary disputes during the sittings of the Joint Committee on Salaries. There was also a feeling among members present that the Executive might possibly consent to the findings of the Joint Committee without referring these to the local associations, and a resolution asking for a special conference was passed. A further resolution was approved urging that the strongest efforts should be made to secure a scale of salaries ranging from £200 to £450 per annum by ten annual increments.

N.U.T. Notes.

A MOST interesting and practical memorandum has been drawn up by a joint committee of the Primary and Higher Education Sections of the Executive relating to various points of interest in school and administrative practice. The subjects include the provision of schools, free education, promotion of children from primary to higher schools, age of transfer, scholarships and bursaries, migration of families in relation to scholarships and bursaries, the award of scholarships by (a) written examination, (b) *viva voce* examination, (c) school reports or recommendations. The report, which has been adopted by the Executive, is worthy of perusal by all who are interested in education, and it contains much information of particular value in considering new developments in school work. In due course a report on continuation schools summarizing all the available information on the subject will be issued by the Executive. The Executive has received an invitation to send members to the Joint Advisory Committee for secondary education in order to represent secondary school teachers who are members of the N.U.T. In accepting the invitation three members were nominated by the Executive to sit on the Committee. The subscriptions to the Union fund in aid of teachers in receipt of insufficient superannuation allowances now exceed £25,000.

THE firm of Messrs. W. & G. Foyle, booksellers, of Charing Cross Road, London, has been converted into a limited company. The company has a stock of more than a million volumes, classified and arranged in departments in charge of experts. The firm buys more than ten thousand volumes weekly, and is able to supply almost any book asked for.

BELL'S MATHEMATICAL SERIES

FOR

SCHOOLS AND COLLEGES.

General Editor: W. P. MILNE, M.A., D.Sc., Professor of Mathematics, Leeds University, formerly Mathematics Master, Clifton College.

RECENT VOLUMES.**STATICS**

By R. C. FAWDRY, M.A., B.Sc., Head of the Military and Engineering Side, Clifton College. Crown 8vo, 5s.; or Part I, Third Edition, 3s.; Part II, 2s. 6d.
Nature.—"This book can be confidently recommended."

DYNAMICS

By R. C. FAWDRY, M.A., B.Sc. Crown 8vo, 5s.; or Part I, Second Edition, 3s.; Part II, 2s. 6d.
School World.—"Mr. Fawdry has performed his task with the sure touch of one who is familiar with all the difficulties which beginners in this subject experience."

STATICS AND DYNAMICS—FIRST PARTS

By R. C. FAWDRY, M.A., B.Sc. Crown 8vo, 5s.
The First Parts of these two books have been issued bound together, in response to requests received from many teachers.

ANALYTICAL GEOMETRY OF THE STRAIGHT LINE AND CIRCLE

By JOHN MILNE, M.A., Senior Mathematics Master of the Mackie Academy, Stonehaven. Crown 8vo, 5s.
Athenaeum.—"The book is plentifully illustrated and well provided with exercises."

A FIRST COURSE IN THE CALCULUS

By W. P. MILNE, M.A., D.Sc., Professor of Mathematics, Leeds University, and G. J. B. WESTCOTT, M.A., Head Mathematics Master, Bristol Grammar School. Second Edition. Crown 8vo, with Answers, 3s. 6d.
Nature.—"A book of a peculiarly suggestive and persuasive kind. Both authors are experienced teachers of mathematics. . . . The style is splendid."

PLANE TRIGONOMETRY

By H. L. REED, M.A., Assistant Mathematics and Science Master, Westminster School. 2nd Edition. Crown 8vo, 4s. 6d.
A.M.A..—"This book represents a successful attempt to write a School Trigonometry on modern lines. We have no hesitation in declaring it to be the best school book on the market. . . . There is a magnificent collection of interesting and varied examples. . . . The boy's interest is at once aroused, and he is given a sense of power which reacts favourably on his other mathematical work."

ARITHMETIC FOR PREPARATORY SCHOOLS

By TREVOR DENNIS, M.A., Head Master of Lady Manners' School, Bakewell. Crown 8vo., 4s. net; or with Answers, 4s. 6d. net. Also issued in two parts, bound in limp cloth. Part I, 2s. 6d. Part II, 2s.

COMMERCIAL ARITHMETIC AND ACCOUNTS

By A. RISDON PALMER, B.A., B.Sc., Head of the Matriculation Department, and JAMES STEPHENSON, M.A., M.Com., B.Sc. (Econ.), Head of the Higher Commercial Department, both of The Polytechnic, Regent Street, London. Crown 8vo.
Fully Illustrated, with colour facsimiles of commercial documents, and a folding Industrial Map of the World. Part I, Third Edition, Part II, Second Edition, 3s. net each; or with Answers, 3s. 6d. net each. Also bound together, 5s. net; with Answers, 6s. net.

Nature.—"It almost makes one wish one were a modern child, so that one could be educated on such a book."

ARITHMETIC

By H. FREEMAN, M.A., formerly Mathematics Master at Haberdashers' Aske's School. Crown 8vo. Seventh Edition. With or without Answers, 3s. 6d.
Educational News.—"The methods shown are the very best possible."

Full particulars of this Series, and of the well-known textbooks of

Arithmetic, Algebra, Geometry, & Trigonometry,
by Messrs. PENDLEBURY, BAKER and BOURNE,
BORCHARDT and PERROTT, &c.,

will gladly be sent on application.

Per Inch in Column, 12/6.			

SCHOOL ANNOUNCEMENTS—

Scholarships, Official Notices, School Transfers, Partnerships, &c.—9d. per line; minimum charge, 7s. 6d.

Posts Wanted or Vacant.—30 words for 3s.; each 10 words after, 1s.; *prepaid rate*.

Lectures, Classes, Non-Resident Posts, &c.—48 words for 4s. 6d.; each 8 words after, 1s.; *prepaid rate*.

An extra fee of ONE SHILLING is charged on advertisements with OFFICE ADDRESS.

If a receipt is required for an advertisement under 10s., a post card or a stamped envelope must be enclosed.

[Advertisers are reminded that "Letters addressed to INITIALS or to FICTITIOUS NAMES, or to a CHRISTIAN NAME without a SURNAME," at Post Offices are not taken in, but are sent at once to the Returned Letter Office.]

All Letters respecting Advertisements and Subscriptions should be addressed—

MR. WILLIAM RICE,

3 LUDGATE BROADWAY, LONDON, E.C.4;

to whom all remittances should be made payable. Orders and Cheques should be crossed, "The London Joint City and Midland Bank, Ludgate Branch." *Postage stamps can only be received at the rate of thirteen to the shilling.*

Notice must be given of all remittances through the Post Office from abroad, stating *full name and address* of the sender; and all Foreign Money Orders must be crossed for payment through a Bank.

Date of publication of next issue will be found at top left-hand corner of front page.

LONDON: MR. WILLIAM RICE, 3 LUDGATE BROADWAY, E.C.4.

THE TEACHING OF ENGLISH.*

By Sir ARTHUR QUILLER-COUCH.

AMONG the many sayings of Don Quixote which endear him to us by their grave simplicity, I specially like his conjecture, propounded to the worthy gentleman Don Diego de Miranda, that the divine Homer wrote in Greek and not in Latin because Greek happened to be his mother tongue.

I shall make that saying the text of my share in the discussion which I am honoured in opening: because it really goes to the root of the matter. If we can once make up our minds on the value of English to an English-speaking man or an English-speaking woman, we shall surely not be far from discovering the right place of English in the education of an English-speaking boy or girl: and when we once have that right place clear in our minds, I for one am certain that we can leave the best method or methods to discover themselves under experiment by many eager minds at work in teaching. Indeed I ask you, reflecting on how much of discovery we stand to gain by allowing these eager minds a very full freedom, to let me put dogma aside for the moment, not even assuming that there is, or can be, such a thing as an absolutely best method.

The divine Homer, then, wrote in Greek, because Greek was his mother tongue: as well as—we may add with some assurance—for the reason that he knew no other. Well, but if he had known a second language, do you suppose he could have written equally well in that? You will agree, I think, that this were incredible. For not does it only overstrain faith by doubling the miracle; it asks us to believe further that the numberless critics who in all ages have praised Homer's native strength, native ease, native grace, native simplicity, were one and all the sport of an artifice. Or,

* From a paper read before the Educational Science Section of the British Association at Bournemouth on September 9, 1919.

again, when Milton speaks of Shakespeare's "native wood-notes" do we not feel the epithet to be exquisitely true, and that Shakespeare, though he had known a dozen other languages well, could not have produced the music that we know—his own music—with its marvellous undertones and overtones, in any but his own Mother-English?

There is a memorable speech, which belongs to memorable thoughts, memorable emotions, memorable occasions. There is a plain speech which belongs to daily life, to business, to ordinary affairs public and private. It differs from literary language, especially from poetical language, and to some extent properly—though I think it differs more than it should, even as I hold that the average man can be, should be, and might to his great profit be, more of a poet than he is. Its vocabulary will include many words that poetry rejects, reject many that poetry includes. Its sentences will be shorter than good prose permits; and naturally, because it traffics with phenomena, "snap-shotting" them (so to speak) as they fleet and pass: whereas literature concerns itself with their underlying permanence—with ideas, with universals: so that we rightly smile at the man who, in company, "talks like a book."

But ought we not to demand of the plainest, most everyday, speech that it be clear, expressive, accurate; graceful when possible, and, at any rate decent? When you assent (as I suppose you do) to my proposition that the vast majority of our countrymen think in English—does not that involve your assent to another—that every English-speaking child should learn to define and clarify in his mind the terms in which he thinks—to think, that is, in real English, and not in jargon? I have no time to illustrate this reaction of speech upon thought. But to take one instance only, let me merely glance at one term—the term "alien"; and appeal to my hearers' experience of late to answer, "How much of clear thought has not, in these five years, and in millions of minds, been clouded by prejudice or muddled by passion, through a hazy sense of this one little word, which in strictness applies equally to a Frenchman, an American, an Armenian and a German Jew?"

Yes: and two other conclusions flow, if we accept it for a premise, from our proposition that a man speaks best in the language in which he habitually thinks:—

(1) The first is that, following the great educational rule of "Improve the best" we should aim, as teachers, through English in preference to any foreign language, be it alive or be it dead.

(2) The second is that English ought never to be treated as a "Special Subject." As the natural medium of our children's thought it ought to be the basis of every subject of instruction. In History, in Geography, in Mathematics, in Natural Science, no teacher should be allowed to teach until he has a grasp of the English in which he proposes to communicate his knowledge, no learner to listen until his understanding has been prepared for the terms employed. I would lay all possible stress on this point; that, for an English-speaking child, the language in which he thinks should never be a special subject, taught apart, but should condition and qualify all his studies.

I think we are now in a position to dispose of one practical question, at any rate, and to dismiss it in a sentence. "Is English adequately taught in our schools and universities to-day?" It is not: and every one in this hall knows that it is not.

I pause here to put in a word of encouragement for those who intend to fight until other studies make room to admit English into their circle, not as any rival queen, but as queen of them all for us and nursing mother. It was not without purpose that in opening this discussion I cited great names and kept you awhile among the heights of literature; because centuries ago the great men of letters fought and won for literature precisely that battle for freedom which—to compare small things with great—we poor pedestrian teachers have to fight and win to-day. Dante, Boccaccio and Petrarch; Ronsard and the French "Pleiad"; our Chaucer, Wyclif and others; all faced out the tremendous authoritative frown of Latin and

answered it—being all learned men, mark you—"Yes, we love your past and you overawe us. None the less you are dead: men no longer think in you: and therefore in spite of your Lucretius, your Virgil, your Cicero, to our poor vernaculars we will turn for salvation. They are vulgar, they have no ancestral trophies. But they are alive and not dead; and in them therefore, starting anew, we will build what monuments we may." The battle was, if you study it, an obstinate one. Long after the vernacular itself had been vindicated, Spenser had to wrestle with Gabriel Harvey, Daniel with Thomas Campion, for the freedom of English as against Latin scansion in English poetry.

Literature, then, won this freedom for itself: but unhappily it did not share out the wealth of its liberty to endow the speech—"plain speech" as I called it just now—in which plain men and women do their everyday business, express their social transitory wants and wishes, conduct the commerce of life. I shall here address myself to the two parties in a main dispute, with a fair prospect of annoying them both.

On the one hand, I maintain that our literature, which took its origin in the proud scholarship of the Renaissance, has from the first been too aristocratic: that the freedom it won has been too like the freedom—the culture it sparingly dispensed, too like the culture—of Periclean Athens; in that both have seen to postulate, if not a slave population, at least a proletariat for which these blessings were not. I do not forget our Authorized Version of the Bible. It is the grand exception, not only proving the rule, but suggesting—to me at any rate—a sad surmise of what our Literature has had in its power to do and, on the whole has missed doing. It has—if you will allow the figure—fashioned priceless things innumerable in gold and silver: it has not done an equal service in ennobling the stamp on the currency. And so I understand what men of science mean, though I know them to be wrong, when they assume Literature to be something ornamental, at play with fancies while they, stern fellows, are occupied with hard truth. They have the excuse, too, that our schoolmasters for more than three hundred years have helped this divorce of literature from reality, even inventing in their Latin and Greek grammars forms of speech not discoverable in any extant writings. Yet, and on the other hand, I am sure that men of science do wrong to misprize Literature. For it deals, after all, with ideas: and ideas are the most powerful agents in the world. Ideas move everything human, science (which is human knowledge) itself included. Yes, and the most positive discoveries of these positive men lie very close to the shadow that rounds us all, and still *excunt in mysterium*. But the question for us is, How can we bring our English teaching to do hard clean stark service in the modern industrial State, and concurrently to humanize it through the ideas of a great ancestral Literature?

I am happy to have reached at length a point on which every reformer in this hall is going to agree with me. Our common obstacle is no human enemy. It is the time-table. That blocks the road not for those only who would improve the teaching of English, nor will the coach-and-four which I shall propose that we drive through it carry us teachers of English for a selfish and select body of passengers. All our ways lead to it, and for the moment it defeats us all.

I start then, from my premise that English, being the medium in which our children think and by which they express their thoughts, is not a "subject" but the root of all learning.

The learning we raise upon this root we may classify in five main branches—Languages, Mathematics, Natural Science, History, Literature. Of these five the two—Languages and Mathematics—which I have put first simply because the schoolmaster puts them first and so far foremost—are, for anything but refined scholarship, mainly of use as ancillary to the other three: Languages to Literature and to History, Mathematics to Natural Science.

Now—confining myself for the moment to that type of Education on which, since we pay the most for it, we presumably set the highest value—I mean, of course, that which begins in a Preparatory School, proceeds to a Public School,

thence to a University, and is roughly divided on the way by a "Schools Certificate Examination" into two stages, the one "General," the other more or less "Special"—I hold that in the earlier or general stage of the five main studies a quite inordinate amount of time is spent on the two which I call ancillary; too much on Mathematics and far too much on Linguistics. I admit of course that the simpler rules of Arithmetic are necessary, even so early as this, with perhaps a little Algebra. I admit the value, in later life, of a command of many modern languages, and shall touch on this presently. I think I know the most that can be pleaded for our old friend, "intellectual gymnastic." I am well aware that, as scholarships and prizes are shared out to-day by our Universities, the age of eighteen or thereabouts may still be called—as Sir George Trevelyan called it, forty years ago, in his "Life of Macaulay"—"the time of life when writing Latin Prose is the most lucrative of accomplishments," and I can therefore, and merely as a man of the world, understand public-school masters training with an eye on these prizes, and preparatory-school masters training with an eye on the Public Schools' demand.

Take a preparatory- or a public-school time-table and compare the time it lavishes on Latin prose composition alone with the time it concedes (if it concede any) to practising the child in his mother-tongue. Reflect next that these urchins are required, not to write the Latin of any useful or living Vulgate, are discouraged even from imitating an author so idiomatic and lively, but so late, as Tacitus, and confined to the so-called golden Latin of Caesar and Cicero. Now I am sure that no human English boy can ever think in Augustan Latin, and (Cicero himself being a polished dealer in second-hand thought) I will add, God forbid that he should! Into the time spared from such enormous waste, the table crowds Greek, Latin, French, possibly some German: and if you ask "Why all this excess of Linguistic?" you get some answer referring you to the old Hellenic breadth of culture: whereas, from whatever cause it sprang, that miracle was manifested in a people which knew no language but its own!

Of this I am sure—we shall never get sense into the time-table until we exhibit hellebore to this craze for linguistic in the lower forms. Until a child reach fourteen or fifteen let him practise the language natural to his mind, and one other: and let him practise English so that it be equally serviceable to him in his later studies, whether he go on to specialize in Literature, History, Natural Science, or aught else. In English, even, postpone his study of Anglo-Saxon and Middle English until he goes up to the University. Teach him indeed that the words he uses have a history, to be respected in his use of them: but worry him with very little philology beyond that.

But about this other language—Which shall it be? Well, as to that, there may be many opinions: and it scarcely affects my main argument that here I am going to be frankly heretical. I vote for Greek.

Yes, for Greek; and why not?

Greek, to begin with—and an easy form of Greek—is the authentic language of the New Testament; on which we assure one another that we base the whole of Christian morality. Greek, too, is the basis of scientific nomenclature in all countries. That is not a bad beginning, I submit.

Greek has—over Latin, at any rate—three tremendous advantages for our purpose. (1) It is, as the Romans themselves confessed, an incomparably finer language, at once more copious and more delicate. (2) It is the key to an incomparably finer literature. (3) Whereas the "easy" authors in Latin are sadly uninteresting, in Greek one can get the child interested at once in Homer, in Herodotus, in the Gospels—three of the most fascinating works in the world, whatever else we may add in their praise. Give the boy his native Shakespeare, Keats, Scott, Dickens alongside of these, and how can you familiarize him earlier, more winningly, more genially, with the glories of his birth and state?

Yet, if you will, reject this plea for Greek. Make your other language French: make it Latin: or try Greek and French as alternatives. I (and those, not few, who think with

me) ask you only to clear the time-table and relieve the children of its early, intolerable weight of linguistics.

Mr. Fisher recently appointed a Committee to inquire into the place which the study and practice of English should occupy not only in a liberal education but in relation to "the needs of business, the professions, and the public services." That Committee is now at work; and, as a member of it, I could not decently forestall its conclusions here, were I able to divine them. I shall conclude therefore with three or four brief notes upon the argument to which you have so patiently listened.

(1) My belief is, the division marked in the terms of reference between the requirements of business, of the professions, of the public services, and the requirements of a liberal education, will tend to disappear in the course of the Committee's inquiry. The first requirement of men and women, whether as citizens or as individuals, who would nobly and intelligently—yes, and happily—practise the art of living, is a liberal education: and in this, as I have tried to show, English is no special subject but, for us, the common mother of all.

(2) What? A liberal education even in our Elementary Schools? Yes—for hear me solemnly profess this my faith, that Humanism should be no decorative appanage purchased late, purchased expensively and by a few. It is rather a quality which should, and can, condition all our teaching, from a child's first reading lesson; its hall-mark can, and should be, impressed on our most elementary tasks.

(3) But if a teacher, conducting a child's first reading lesson, would make "that, and the action, fine," he must cast away shyness, and, having chosen some simple and beautiful passage, show how winningly the words can fall from his own lips. There, oddly enough, lies a great part of our trouble. We have fenced our literature off like a Turkish woman. We are shy of speaking it out. As for training the young to enunciate their own magnificent language—well, listen to the clergy, what noises they make! I know well enough the value of "silent reading," and our want of it in elementary schools. It is the master-key to all knowledge. But let us read aloud as well, and learn to read aloud that we may be able to teach. I speak particularly of the elementary schools because it seems likely that they will provide in the near future a large proportion of our public speakers; and I am assuming (rashly perhaps) that we shall prefer them to be articulate.

(4) "But where are we to find the teachers to fulfil these requirements"—and others that I might mention? Yes, there, for the time, lies our gravest difficulty. I am betraying no confidence, I hope, when I tell you that already the English Committee finds itself recurring upon this, and estopped by it—this difficulty of finding teachers of the language in which we are all supposed to think. I will tell you, at any rate, where they will never be found, save exceptionally and in exiguous numbers: and that is in narrow professional training colleges. When will our rulers learn the sense to save their money on these colleges, and to employ it either in sending their prospective teachers to genuine Universities where they can rub minds with other youths destined for other walks of life, or in so raising the salaries of our actual teachers that it will be worth a parent's while to invest on a child for a University degree, even as he invests to get him qualified for medicine or for the Bar?

(5) The fault lies not in the men and women we train, but in our frantic system. I suppose that no calling in this country can show, at this moment, such a proportion of men and women eagerly striving to do more than their best for a ludicrous monetary reward. I end, as I began, with saying that their keenness is such as to silence dogma and bid it wait on their experiments. I have listened to elementary-school masters—to infant-school teachers, conferring bow to make their teaching of English better. In a garden at Eton the other day I listened to a similar informal conference among teachers of that great school; and, although the difficulties differed, the spirit was the same. I am sure that a spirit so eager, if we but allow it scope to experiment with a

language so full and various as ours, and containing in its literature such a wealth of models, from the majestic to the familiar, will end in discovering an education based on native thought, sensitive to other thought, reverent of our past, and equal to our future.

FOREIGN AND DOMINION NOTES.

UNITED STATES.

In comparison with Oxford and Cambridge, the American universities are young. The oldest, Harvard, celebrated her two hundred and fiftieth birthday, however, in 1886; and she is fully conscious of her right to precedence in the society of American academies. A writer in the *Boston Education* (XL, 1) tells of a former Harvard president who, in his chapel prayer, was accustomed to invoke the divine blessing "on this and all inferior institutions." Harvard refers to Yale as not only sixty years later in the time of her birth, but as having kept that distance behind ever since. Columbia is an old British foundation. But Cornell in 1903 could but celebrate a semi-centennial anniversary; and Chicago in 1916 only a quarter-centennial. The great State universities, doing vitally important work in their several spheres, are of quite modern origin. But, of whatever age or with whatever sentimental claims to honour, the American Universities are alike the homes of American idealism. Says the writer in *Education* whom we have just cited: "Money is the common denominator of all human wants, but though the dollar is the popular yardstick of all our interests, it is not almighty nor the supreme consideration, but has its greatest importance when held in due subordination to higher values." The prayer used at the quarter-centennial celebration of the University of Chicago contained these words: "Make us equal to our high trusts, reverent in the use of freedom, just in the exercise of power, generous in the protection of weakness." These are not the utterances of sordid materialists. We should be removing the last obstacle to a complete understanding between America and Britain if we could get our countrymen to study more closely and to revere the idealism of a James Otis, a Patrick Henry, a George Washington, a Daniel Webster, an Abraham Lincoln, and a Woodrow Wilson—the great living idealist storm-tossed and sorely battered on an ugly sea of politics. It is from the American universities that such idealism radiates among the young.

What those universities did in the War is illustrated by the foremost article, "American Scholarship in the War," in the *Columbia University Quarterly* (XXI, 3). A single division of the National Research Council, in its report for 1918, showed work of national significance by scholars in physics, mathematics, and allied fields toward the solution of no fewer than sixty-eight different problems, every one of which needed for its solution men with training and knowledge and vision. A device elaborated by American physicists gave soldiers nineteen seconds in which to take cover from cannon fired four miles away. College professors made improvements in gas masks, and discovered new gases of offence. A Columbia professor of education organized an educational programme that served as a therapeutic for the wounded. "Scholarship," be it observed, is used in the article in a wide American sense, the scholar being "an expert in any field who knows enough of other matters to see his own specialty in its relation to things in general." For Sir John Sandys a scholar is "one who through his early training and his constant self-culture has attained a certain maturity in precise and accurate knowledge." Men take old terms and fill into them a new content—not always gainfully.

The Thirty-ninth Annual Convention of the American Federation of Labour, held in Atlantic City, June 19 to 23, approved the Smith-Towner Bill, urged that scientific and technical research should be fostered in every way by the Federal Government, and, for the support of teachers, passed a resolution that they should have secure tenure of position during efficiency, being dismissible only after full hearing before a commission on which they are represented. The meeting of the National Education at Milwaukee early in July was sparsely attended. *The School Review* (XXVII, 7) states that it took no action of importance to American education, and produced no report or plan having pregnant suggestion. The Association is threatened with dissolution, as other organizations with more homogeneous interests are coming into prominence, and it cannot free itself of political wire-pulling and internal dissensions. We must apparently look henceforth to the Department

of Superintendence and the Teachers' Federation for the valid expression of collective educational opinion in the United States.

FRANCE.

A writer in the *Revue pédagogique* (LXXIV, 8), under the rubric "Pedagogy at the University," studies suggestively the part that the French university ought to play in the cultivation and advancement of pedagogy. At present the universities have Chairs with education as a province; but pedagogy, or the technique of education, has its scientific roots in physiology, psychology, sociology, and ethics. This technique can be elaborated scientifically only in conjunction with such auxiliary sciences of education, which, in their turn, lose by detachment from a legitimate domain of experiment. And, to keep touch with primary education, the University should undertake the pedagogic training of candidates for the offices of primary inspector and director of a normal school. To give that training efficiently, the Chair of Education should co-operate with the Chairs of Ethics, Sociology, General and Experimental Psychology, and the Hygiene of Infancy, the holders of these Chairs forming a Committee of Education, which would control the programmes of instruction and the conditions under which diplomas were granted. And, as the most vital element of the proposed reform, there should be attached to every university an *école annexe*, a school analogous to such institutions as the Lincoln School of Teachers College, New York, to serve at once as a model and as a field of experiment. We observe that the Calcutta University Commission, whose report is noticed below, propose to establish "a large practising school and also a small demonstration school; the first to accustom the students in training to the methods which should be used in every good school under normal conditions of work; the second to provide opportunity for educational experiments and for the trial of new methods and courses of instruction." Whether practice and experimentation be combined in the same institution or pursued separately, they are equally important. Under the old regime, education was a tradition of practice, and experiment was sheer impiety. The French writer properly indicates the mainsprings of reform in pedagogy—intimate co-operation with the allied sciences, and experimentation, and, as properly, assigns to the University the task of reforming it.

GERMANY.

The German mountain is in labour, and only the gods know to what it will give birth. The meeting at Berlin in June of the *Deutscher Lehrerverein*, attended by teachers of all orders, formulated for education the principles here shortly summarized. (i) Nature and Mission of the School. (1) Democracy requires an education that will give to every citizen the greatest productive capacity and the most complete sense of responsibility. (2) Schools should be uniform and self-governing. (3) Privileges must be abolished. Admission to any vocation or vocational school (the Universities included) should depend not on the order or kind of school attended, but on the proof that the applicant can furnish of his capacity. (ii) Obligation to attend school. (1) Obligation should begin at the earliest with the completion of the sixth year and end with the close of the eighteenth. For eight years at least the education should be general; then should follow continuation, compulsory on both sexes, in schools pursuing at once liberal and vocational aims. (2) Where there is no proper home education, attendance of a maternal school should be obligatory after the completion of the third year. (3) All public schools for those of the imposed school age should be free, and school material should be supplied gratuitously. (4) Private schools that divide children by distinctions of class, means, or religion must be abolished. Where for some urgent reason they are allowed to remain they should be under the surveillance of the State. (iii) Organization. (1) The basis of the whole educational structure should be the *Einheitsschule*. (2) The schools above this (continuation and special schools) should be organized so as to give a general culture that would enable the recipient to enter a University. (3) Separate provision should be made for the abnormal—the blind, the deaf, the dumb, and so forth. (4) Schools of every sort should be distributed according to the wants and population of the districts.

INDIA.

The Report of the Calcutta University Commission is an important document in the history of Indian education. With regard to secondary education the Commission find:—(a) Most of the high English schools are under-equipped and are conducted by an underpaid and for the

most part an untrained staff. (b) They are unduly dominated by an examination (the matriculation) which is itself ill-designed and not of sufficiently high standard, and which gives no encouragement to many subjects of study necessary for the welfare of the pupils and for the prosperity of the country. (c) Owing to the existing division of authority between the University and the Department of Public Instruction there is no adequate machinery for supervising, guiding and assisting the work of the schools as a whole; in other words, a coherent system of secondary education does not yet exist. (d) A large part of secondary education is actually conducted, not by the schools, but by the colleges of the University in their intermediate classes. It is recommended that the standard of admission to the University should be that of the present intermediate instead of that of the present matriculation examination, and that "the duty of providing training at the intermediate stage should be transferred from the University to new institutions to be known as 'Intermediate Colleges,' some of which should be attached to selected high schools, while others should be organized as distinct institutions." Even with the intermediate students withdrawn, the number of students remaining to be dealt with would be too great for a single University organization. Hence a great re-casting of the machinery of instruction is proposed in order to make Calcutta a real teaching University, offering an adequate technical as well as a literary training.

The administrative changes outlined are too large and complex to be set forth in a paragraph. We must be content to record in this the judgment of the Commission on three matters of general interest. (i) It recommends that the project of a university at Dacca should be carried into effect at the earliest possible moment; and advises also the adoption of a mode of organization for the mofussil colleges such as to encourage the gradual rise of new university centres by the concentration of resources for higher teaching at a few points. (ii) As to the professorate, the titles of professor and reader should be strictly reserved for persons upon whom these titles are conferred by a university, and who are in receipt of a minimum salary, to be determined. Appointments to professorships and readerships should be made by special selection committees including external experts; and, in order that there may be in each university a certain number of Western-trained teachers of these ranks, a defined number of professorships and readerships in each university should be appointed on the nomination of selection committees acting in England, but including representatives named by the University. (iii) To promote the education of women a standing committee should be formed, such committee to include women and to be empowered to consult bodies consisting of women only, in which *purdah* women could take a part. An attempt should be made to organize *purdah* schools for Hindu and Moslem girls whose parents are willing to extend their education to fifteen or sixteen. Women should be admitted, so far as possible, to the instruction provided by the University; but, in the special circumstances of Bengal, the main provision for them must be made in distinct institutions and under special direction.

As to the medium of instruction, the Commissioners think that the educated men and women of Bengal will wish to be bilingual. Accordingly, the vernacular should be used throughout the high schools except for the teaching of English and mathematics; but the general medium in higher education should be English. In the *Madras Educational Review* (xxv, 5 and 6) Prof. Seshadri pleads for the establishment of a university at Baroda, a progressive city of more than a hundred thousand inhabitants. He, too, whilst he would foster the vernaculars and give them a definite place in university examinations, upholds English as the proper language of higher education, linking India, as it does, with the whole civilized world, and laying open a range of intellectual treasures wider than can be created in an Indian language within any measurable time.

SOUTH AUSTRALIA.

In South Australia the study of agriculture is being fostered. Arbor Day is observed, and this year trees were planted in honour of dead soldiers. At the Royal Horticultural Society's Summer Show there was a competition for public-school children. Again, agricultural scholarships are offered in certain recognized high schools. As to teachers, they are being encouraged to visit other schools, reporting to the District Inspector the result of their observations. Salaries, it is complained, are low—lower than in any other State of the Commonwealth. Except to one section of teachers—that of the unclassified—no general allowance has been made to cover the

increased cost of living. Women, in particular, are ill paid; for assistants the minimum is £100, the maximum £156; whereas in New South Wales the minimum is £150 and the maximum £237. A recent award in Western Australia gave to adult women workers in factories £2. 2s. a week; a hundred women teachers in South Australia are working for less.

UNIVERSITIES AND SCHOOLS.

GENERAL.

The Universities are busily engaged on the work of reconstruction. The number of students at each of them promises to equal, or even to exceed, the customary limits of pre-war years and the work of filling up the gaps in the teaching staffs due to the war is proceeding apace. We have arrived at a critical period in the history of University education. The difficulties in carrying-on caused by the war are over; but the losses, both in men and in money, have still to be made good. More than this, our outlook on the future has changed and is still changing. Many of the opinions now strongly held will prove to be transient; many, on the other hand, will remain. It is the difficult task of the authorities to distinguish between these views, and the position which the Universities are to hold in the national life of the future will be determined by the choice which is now being made. The technical branches of science are making strong claims for recognition, and the importance of the study of modern languages is being strongly urged. Nor is commerce without its advocates. Modern languages have been recognized by the institution of new professorships in Italian, Spanish, and Russian in many colleges. In this connexion the proposals made at Cambridge to allow candidates to sit for a diploma in foreign languages will be of interest. It is proposed that the candidate shall be a member of the University who has passed the Previous Examination and has kept two terms, and that he shall take the papers set in one or more languages in Part I of the Modern and Medieval Languages Tripos. There will also be an *oral* examination.

There is no sign yet at the Universities of any recognition of the changed conditions which must be produced by the development of advanced courses in secondary schools. As things stand a student passing from one of these courses to a University may be required to repeat a great deal of the work he has already done. Further, he is actually handicapped in competing for scholarships by the fact that advanced course syllabuses are less specialized and provide a more general education than University scholarship examiners require. It would be of immense value to education in the University, as well as in the school, if arrangements could be made for the University authorities, the teachers in secondary schools, and the Board of Education, to meet together to discuss the problems involved. At present all three seem to be trying to act on different lines.

The Authorities of London University have decided that the teaching of military science, suspended during the war, both as a branch of general education, in which case it ranks as an optional subject for the B.A. and B.Sc. degrees, and for candidates for University commissions in the Regular Army, shall be resumed. Both classes of student will obtain practical training in the University Contingent of the O.T.C. Major G. P. A. Phillips, O.B.E., has been appointed Lecturer for the current session, and lectures and practical training will be arranged at centres in London convenient for the students of the various colleges.

The Superannuation Act of 1918 does not apply to teachers in schools run for private profit, nor, indeed, to non-profit-making schools which are able to maintain satisfactory pension schemes. Efforts were made to get such schools brought under the Act, but the Board of Education refused the concessions which were offered on behalf of these schools. If they were to keep the teachers already in their service, and attract others, they were bound, therefore, to adopt some method of self-protection. The Federated School Pension Association is an attempt to solve the problem. In brief, the schools which join the Association propose to take out assurance policies for the members of their staffs. These policies will be held by the Association and thus teachers will be able to pass freely from school to school among those which are members of the Association. The principal advantages claimed for the scheme are that the pension will not depend upon the salary paid, that there will be no qualifying period of thirty years' service, and that there will be a possibility of free movement among a greater variety of schools. As to the cost, the tables included in the published memorandum show that the premium required for a male graduate entering an Association school at twenty-five-

to provide the proposed benefits of a pension of £200 and a lump sum of £550 at sixty, will be £43. 11s. 8d., and the whole of this premium will be paid by the school, the cost being met by a small rise in school fees. It is probable that policies will be taken out for existing staffs, though the premiums for teachers who are nearing the pensionable age would probably prohibit the provision of a pension of the above amount. Nor are the questions of benefits at death or on disablement through illness, apparently, yet decided; though, if the scheme is to compete with the Superannuation Act, substantial financial benefits must be forthcoming. A considerable number of schools have already joined the Association. At present the details of the scheme are being worked out by a provisional committee under the chairmanship of the Rev. Prebendary Talbot, Provost of Denstone. Obviously, no detailed criticism, still less a definite opinion as to the prospects of the Association, can be offered until the scheme in its final form has been published.

WALES.

Wales is at present confronted with a serious problem which must be quickly solved if she is to realize all her expectations of educational advancement. The shortage of teachers, especially in the elementary schools, has become so serious that many Authorities are unable to staff their schools at all adequately, and, unfortunately, with the return of peace conditions, there is, so far, no indication that the teaching profession is becoming more popular with the younger generation. Though salaries have been increased and the status of the teacher improved, there is a marked reluctance on the part of parents to recommend their children to prepare for the teaching profession. It may be that they are ignorant of the altered conditions which have been brought about, and that the effect of a campaign instituted some time ago against the entry of our promising pupils into the schools is still to be felt. But, whatever the reason for the deficiency may be, it exists, and it was treated as an urgent question at the recent Conference of the Federation of Education Committees at Llandrindod Wells. In Wales, the number entering the training colleges in 1908 was 842; in 1918, 805, though the demand was far greater. Mr. Rhys Elias, the Director of Education for Merthyr Tydfil, suggested that the shortage was due mainly to the low initial salaries compared with those obtainable in industries, and he was of opinion that, unless these were at least doubled, it would be impossible to staff the schools properly. The Federation have referred the whole question to their Executive Committee and directed that a pamphlet be prepared setting forth the advantages of the profession.

Allied with the question of supply of teachers is the question of training facilities, which are still inadequate, especially in South Wales, and a joint conference representing the counties of Brecon, Radnor, Carmarthen, Pembroke, Montgomery, and Cardigan was held at Llandrindod Wells to discuss the desirability of extending the existing facilities for Mid-Wales. Sir Owen Edwards attended, and his suggestion was that it would be better to arrange for a two or three years' course at some University centre rather than to establish a new training college. On the other hand, Mr. Jenkyn James, the Director of Education for Cardiganshire, pointed out that it was the rural areas which suffered most from the shortage, and that the type of college which was most urgently needed was one which emphasized the special training for the work in country schools. As there was some diversity of opinion as to the policy to be followed, it was agreed to ascertain the views of the areas concerned.

The scheme outlined by Sir Henry Jones at the Corwen Eisteddfod has, on the whole, been well received, and in certain areas preliminary steps have been taken to consider how far it is a practical and feasible scheme. His plan is to utilize the existing organizations connected with the Churches as centres for the diffusion of knowledge, and to make them responsible for the effective working out of the plan. He is also sanguine enough to believe that, even in the small towns and villages, it would be possible to gather together a group of, say, twenty people for three years to attend a continuous course in such subjects as economics or science, the classes being tutorial and conducted by the University. The scheme is undoubtedly interesting, and well worth consideration, and if Sir Henry in his intended tour can instil some of his own enthusiasm into the Churches and the masses generally, it has a reasonable chance of success. But he will have great difficulties to face, not the least of which is the inertia of the public, especially in the rural areas. Further, his whole scheme depends on an adequate supply of trained teachers, and we question whether there is any reasonable chance that it

will be forthcoming for a long time. For, as already pointed out, even the existing institutions, not counting the continuation schools, are barely able to meet their requirements. All the same, nothing but good can result from a new educational campaign amongst us.

Several important appointments have recently been made in Wales. At the University College of Wales, Aberystwyth, Prof. B. Mowatt Jones has been selected for the Chair of Chemistry. During the war he was Head of a research laboratory in France, dealing more especially with poison gases. It was also intended to appoint a professor of Celtic, but this has been deferred until the end of the present year. An expert committee had recommended that the present lecturer, Dr. Parry-Williams, be appointed, but objection was raised to his appointment on the ground that he was a conscientious objector. The other candidate was Mr. Timothy Lewis, Assistant Lecturer in Welsh, who had seen service during the war. To the Professorship of Mathematics, Dr. W. H. Young, late Fellow of Peterhouse, Cambridge, was appointed in succession to Prof. R. W. Genese. Prof. Genese had held the post from the establishment of the College, and has had a marked influence on mathematical teaching in Wales. To the head mastership of Llandovery County School, Mr. John Evans, from Llandilo County School, was appointed. The Breconshire Education Committee have appointed Mr. W. Emrys Evans, from the Caerleon Training College, as their Organizer of Education. This is the first appointment of the kind in the county, and, so far, but few of the smaller Welsh counties have ventured on the experiment of seeking expert advice on their educational problems. But no doubt the complexity of the questions arising from Mr. Fisher's Act will, in time, compel them all to do so. Mr. R. M. Kinsey, from the Towy County School, is the new Head Master of Newtown County School. There still remain two head masterships to be filled—those of Llangollen and Llanrwst.

We understand that the Glamorgan Education Committee have been considering a new scheme for the county, though, as yet, the details are not finally settled. The present governors in the intermediate school areas will take under their supervision all forms of education within the areas and thus bring into closer co-operation all types of schools—elementary, middle, continuation, and intermediate schools. The present duality of control will be abolished, and the County Education Committee will assign great powers to this local committee, so that, in many respects, they will become autonomous. It has also been passed that no intermediate school can charge less than £4 per annum, which is, of course, extremely low in view of the present expense of education. Other details were also considered, but, as no final decisions have been arrived at, it is better to reserve comment on them. This Committee have also received a strong deputation from the head masters of the secondary schools on the question of salaries. The present maximum is £650 for the larger schools, but this figure is considered inadequate. The Committee are now giving further consideration to the appeal. Substantial increases in the salaries of the assistants are also foreshadowed, and it is probable that the maximum will be fixed at £500. Should this be correct, the action of Glamorgan will have a stimulating effect on other Authorities, which so far have been very niggardly in their scales of salaries.

Other Education Committees are considering their new schemes under the Act, but not much progress has been made, and the majority of them are probably waiting for a lead before committing themselves to a definite plan. Further, it would probably be unwise for them to do so until Mr. Bruce's Commission has investigated the whole question of control and issued its report. This Commission has held a few preliminary meetings and has requested certain Authorities to prepare evidence, among them the Central Welsh Board, but has not as yet really embarked upon its work.

Glamorgan has decided to raise the leaving age to fifteen. When the question was discussed at Cardiff, it was reported that the raising of the age would mean an increase of £18,000 in the annual expenditure, and a capital expenditure of £100,000. It was, therefore, resolved to defer further consideration of the matter.

Glamorgan has decided to raise the leaving age to fifteen. When the question was discussed at Cardiff, it was reported that the raising of the age would mean an increase of £18,000 in the annual expenditure, and a capital expenditure of £100,000. It was, therefore, resolved to defer further consideration of the matter.

SCOTLAND.

The exceptional interest excited by the annual meeting of the Institute this year was evident from the crowd of delegates and other members who packed the large hall of Moray House, Edinburgh. (Continued on page 744.)

University Correspondence College

(FOUNDED IN 1887.)

Principal: WM. BRIGGS, LL.D., D.C.L., M.A., B.Sc.,
F.C.S., F.R.A.S.

During the last Fifteen Years

Univ. Corr. Coll. Students

have passed the

INTERMEDIATE AND DEGREE

Examinations of

London University

in addition to gaining 5207 successes at Matriculation,
and numerous successes at other Examinations Exempting
from Matriculation.

Some Press Opinions.

"A well-organized Correspondence College, such as that which flourishes under the direction of Dr. Briggs, with its highly qualified and expert teachers, its clerical staff, and well-devised machinery, is a help of the most valuable kind."—**The Schoolmaster.**

"Having been in touch with students of the College for many years, we are convinced that the tuition is practical. **The College Staff is one of remarkable brilliance.**"—**London Teacher.**

"University Correspondence College is doing a splendid work, offering as it does most of the advantages of College or tutorial training to such students as draughtsmen engaged in works in isolated districts where no technical college exists."—**Engineering.**

"A large organization that has developed remarkably upon its inherent merits. The College is doing eminently useful work."—**Educational Times.**

"The well-known University Correspondence College has now gone far in the direction of obtaining a monopoly of the best class of tuition by correspondence."—**Financial News.**

"The most remarkable modern educational institution in the kingdom, the most successful of its kind in existence."—**Publishers' Circular.**

"University Correspondence College is itself, in a sense, entitled to University rank, and in conjunction with London University, it is fulfilling a function of truly national importance."—**Scottish Educational Journal.**

"Of the many institutions which profess to provide tuition by correspondence the University Correspondence College is one of the oldest and it is certainly one of the best and most successful."—**Electrician.**

The Teachers' Guild of Great Britain and Ireland,

9 BRUNSWICK SQUARE, LONDON, W.C.1.

NOTICE is hereby given that the Thirty-sixth
ANNUAL GENERAL MEETING of the Teachers'
Guild of Great Britain and Ireland will be held
at University College, Gower Street, W.C.1, on
Thursday, January 1st, 1920, at 10.30 a.m., for
the transaction of the following business:—

1. To receive the Annual Report of the Council.
2. The election of a President.
3. The election of a Treasurer.
4. The election of eight general Members of the Council.
5. The appointment of an Auditor.

ALBERT EHRHARDT,
General Secretary.

At the conclusion of the Annual General Meeting, the retiring
President, Canon J. H. B. Masterman, will deliver an Address.

JOHN M. PROCTOR & CO.,
St. Anne's Institute, Island Street, Nottingham.

Probably it was the prospect of a heated debate on the Minimum National Scale that was the main attraction, but the report that Mr. Emslie's friends intended to put him up for election as president against the Council's nominee also gave zest to the proceedings. The discussion of the scales amply satisfied expectations. After a long debate the meeting ended by refusing to accept the scales issued by the Education Department as a solution of the salary question, and insisting on all existing teachers being placed on the Graduates' Scale. The consideration that dominated the discussion was a sense of indignation at the undue differentiation between graduates and non-graduates. Though there is practical unanimity as to the desirability of all future teachers having a University degree, those who, in the past, have come into the profession through the training colleges, forming the majority of Scottish teachers, resent the penalizing provisions of the scale being made retrospective. As the Minimum Scale has now the force of law, the finding of the annual meeting means that the Institute must approach the Education Authorities in order to secure local modifications of the scale. The Emslie case was more briefly considered. The meeting refused to accept a motion which declared that his dismissal was "an act of gross injustice to him as an individual and a dangerous blow to the teaching profession" and called for his reinstatement. Most of those present seemed to think that his appointment to Speir's School, Beith, made further action unnecessary. His nomination as president secured no greater support, and Mr. T. S. Glover was duly elected.

Everybody present at the meeting was in agreement with the view expressed by Mr. MacGillivray, the retiring president, in the course of his admirable address (which had to be given to the public through the press owing to lack of time for its delivery), that the Institute of to-day, with its 22,000 members, had outgrown the constitution which served at an earlier stage. The annual meeting is supposed to pass in review the work done in the course of the year of the Council, but, with a few outstanding topics monopolizing attention, decisions of the greatest importance had to be accepted without comment or discussion. The policy of the Institute in regard to the supply of teachers required to carry out the provisions of the Munro Act and to the Code of Professional Etiquette—to take two important examples on which there is considerable diversity of opinion—might very profitably have been considered by the meeting, but there was simply no time for their consideration. All this gave point to the proposals submitted by Mr. Hugh MacCallum, the new Director of Studies of the Glasgow Provincial Committee, for the restriction of the number of delegates to the annual meeting to four hundred and the reduction of the Council to a membership of sixty. These proposals, though approved by the annual meeting, have still to go before the Local Associations; but the need for a reduction of numbers in the interests of business efficiency is so generally recognized that this or some similar scheme is likely to find universal acceptance. Apart from questions of size, the only point on which there may be any controversy concerns the powers of the delegates. One section of the Institute is anxious to follow trade union precedents and limit the delegates by instructions from the Local Associations; but, so far, this view has not secured any wide acceptance.

The capable way in which the new Education Authorities have, for the most part, been grappling with the difficulties of a transition time has justified the belief inspiring the Act of 1918, that Scotland would gain greatly by an extension of the area from which her educational representatives were drawn. The fact that most of the Authorities have had the wisdom to select teachers of standing for their executive officers has favourably impressed the teaching profession, and created a basis for better relations than commonly prevailed in the days of the School Boards. The Dumfriesshire Authority, with the view of ensuring the continuance of this good feeling, has established a Joint Committee consisting of seven representatives of the Authority and an equal number of the teachers for the purpose of considering their views upon questions in which the Authority and its teachers are jointly interested. The teachers are to be appointed by the Local Branches of the Institute. This modified form of Whitley Council will, it is to be hoped, be adopted by other Authorities at an early date. The Ayrshire Authority has given a lead, no less important, in another direction, by accepting the principle that non-graduate teachers who give evidence of capacity should reach ultimately the same maximum as the graduates. The only difference made is that, after reaching their own maximum as fixed by the National Scale, they get their increments every second year (instead of every year) until they come to the higher maximum. If this ingenious expedient were accepted by all the Authorities, the salary trouble would probably disappear.

An unexpected result of the "new broom" activities of the Edu-

Religious Instruction.

cation Authorities has been a mild revival of old controversies about religious instruction. A number of the candidates, at the time of the election, put the defence of Bible teaching in the front of their programme. It was a rather silly cry, because, outside an insignificant section of Labour people, no party in Scotland has any desire to upset the present arrangement. But, having constituted themselves defenders of the faith, those returned on this ticket had to do something to justify their election. Generally their zeal has found outlet in insistence on more religious instruction in the secondary schools, where the crowded curriculum has kept the time devoted to religion within narrow limits. Where this has been done with proper regard to the teachers' wishes in the matter, no difficulty has arisen. It is only when all teachers in a school, excepting those who are prepared to court trouble by declaring themselves disinclined, are compelled to take an active share in teaching to a syllabus externally imposed that any objection arises. In one centre the teachers pointed out that they were all specialists, and that those who gave religious instruction to secondary pupils should be specialists too. Over all this there is not likely to be any serious trouble, so far as secondary teachers are concerned, unless, indeed, some Authority is provokingly unwise. That that is not impossible is evident from the fact that the Renfrewshire Authority has made the teaching of the Shorter Catechism compulsory in all its schools, regardless of the growing opinion, not only among teachers but in the community at large, that the Catechism is beyond the capacity of children.

An indirect response to the requests of many of their members for guidance, the Executive of the Institute have issued a statement on the subject. The conviction of the Institute that religious instruction should occupy an important place in the school curriculum, and that the devotional as well as the intellectual aspects of such instruction should be emphasized, is once again affirmed on behalf of the teachers of Scotland, and protest is made against the institution of external examinations.

Following up the arrangements already made for bringing the school medical service under the control of the Scottish Board of Health, the Education Department have issued a circular to the Education Authorities regarding medical inspection and treatment. Why the circular should not have come from the Board rather than from the Department it is difficult to see, since the responsibilities of supervision now rest solely on the Board. Direct relations between the supreme Medical Authority and the Education Authorities would obviously make for simplicity. As it is, the latter are required to submit schemes in duplicate to the Board of Health and to the Department, and the Board are to report later to the Department on the carrying out of the schemes. So far as medical inspection goes, there is to be no great change made meanwhile. The existing schemes, which were those of the old secondary education committees, and therefore on a county basis, are to be continued. The only significant difference is in regard to medical treatment. Hitherto it has been within the option of the bodies concerned whether they would provide treatment in addition to inspection, and only a few did. Now intimation is given that schemes for medical treatment will be required from all the Authorities, and May 15, 1920, is fixed as the date by which these must be submitted.

During the past month four Glasgow lecturers have received professorial appointments. Dr. James F. Gemmill, Research Fellow in Embryology and for many years one of the mainstays of the Millport Marine Biological Station, becomes Professor of Zoology in University College, Dundee. Dr. W. E. Agar, Lecturer in Zoology, goes to the Chair of Biology in Melbourne with a brilliant record of investigations in regard to heredity. Mr. J. H. Jones, Lecturer in Social Economics and Director of the Glasgow School of Social Study, has been appointed to the Chair of Economics in Leeds. Dr. Robert J. T. Bell, Senior Lecturer in Mathematics, has been made Professor of Mathematics in the University of Otago, Dunedin, New Zealand. This raises the number of Glasgow lecturers who have gained professorial rank in the course of the present year to the total of thirteen.

The Rev. Andrew C. Baird, a young Glasgow Minister, has been appointed Professor of Divinity and Biblical Criticism at Aberdeen University.

The sudden death of Prof. James W. H. Trail is announced. Prof. Trail has occupied the Chair of Botany in the University of Aberdeen for forty-two years, having been appointed to it in 1877 at the age of twenty-six. He was a Fellow of the Linnean Society and a Fellow of the Royal Society. Outside his University duties, in which he was untiring, his main interest was in the educational sphere. He was chairman of the old Aberdeen Burgh Secondary Education Committee, a member of the Edu-

Total.....	—	60	26	19	105
Total all Grades.....	—	129	39	36	204

In addition a fair number of prizes were awarded for composition in all grades. It will be observed that the study of Greek is extinct in girls' schools. Latin is still kept up, as it can be counted as one of the subjects of the second—the Modern Literary—group, which is the most attractive by far of all the groups in these schools. Among boys the two groups, which would be formerly by all, and are still by many, considered as the most important in secondary education—viz., classics and mathematics—come off much worse in awards than the other two.

(Continued on page 748.)

MONTESSORI

Dr. Maria Montessori author of the famous educational method will give a series of three popular lectures.

Kingsway Hall. Nov^r 6th 13th & 20th at 5.45pm.

*Tickets should be secured at once
from M^r C.A. Bang, 20, Bedford St. Strand.
10/6 for the three lectures.*

The Daily Telegraph

VICTORY ATLAS

PARTS 1, 2, & 3

NOW ON SALE

The whole World re-mapped with all the changes determined by the Peace Conference. The affairs of the World have become the affairs of every man, and constant reference to this Atlas is a necessity to all.

Every child should be encouraged to add to his knowledge of the world, and every parent for his own good and the good of those to follow should have the Atlas always available.

The Index Gazetteer, which is being compiled on the basis of this Atlas, will contain over 250,000 names, and will give full particulars as to population, industry, means of transport, political and historical information, &c.

This absolutely new Atlas establishes its superiority on comparison with any other Atlas, and will be the standard and authoritative work of the future.

Completed in about 48 fortnightly parts. — 1/3 net each part.

Order your Bookstall to-day to send you each part as published, or apply to
"GEOGRAPHIA, LTD.," 55 FLEET STREET, E.C.4.

MAXIMUM RESULTS WITH A MINIMUM

 OBTAINED BY USING

'The Ferst Reeder in Simplifyd Speling'

(Edited by a Lecturer in Phonetics)

FIVE MONTHS SAVED:

Children in a Scottish Elementary School who were taught for TEN MONTHS from this Reader and the ordinary spelling for FOUR MONTHS, were as good in reading and spelling as children who had learned the ordinary spelling for NINETEEN MONTHS, and their speech was clearer and better.

The Reader contains Poetry and Prose, and costs 6d.; but we supply copies at reduced terms to teachers who use the book in their classes.

THE BOARD OF EDUCATION HAVE SANCTIONED EXPERIMENTS WITH SIMPLIFIED SPELLING IN ELEMENTARY SCHOOLS.

SIMPLIFIED SPELLING SOCIETY,
44 Great Russell Street, LONDON, W.C. 1.

DRUMMOND LATHES

Are right at the Front. The important part played by Lathes in the present war cannot be exaggerated. A knowledge of Lathe Work means that at all times you are "Right There" and your services indispensable. DRUMMOND LATHES stand for the "HALL MARK" of Accuracy, and in the education of all a good knowledge of Lathes and their uses is invaluable. The 3½ in. Lathe illustrated below is low in price, but capable of the highest class work.

As supplied by the British Admiralty.

Catalogues on application to **DRUMMOND BROS., Ltd., VIEW HILL, GUILDFORD.**

At the time of writing there is still no news of the promised Education Bill, and teachers are becoming anxious. One of the Commissioners of National Education, who was formerly a

The Education Bill.

National school teacher, has stated, in writing, his belief that National school teachers will be treated by the Bill with a generosity at least equal to that accorded to the Scottish teachers. There is no similar statement of authority to record about the salaries of intermediate teachers, whose position is far worse, comparatively, than that of National teachers, and who have at present no pensions at all. One can only hope that when they introduce the Bill the Government will take their courage into their hands and go on with it. There is sad need of reform, and the Government know it; or else why appoint, in the summer of last year, two Vice-Regal Committees? National teachers have held meetings in different parts of the country urging that, Bill or no Bill, they should be paid the scale of salaries recommended by the Killanin Committee.

Sir Bertram Windle, President of University College, Cork, is resigning his post at the end of the present session, next June, after sixteen years' service.

Had his wished-for project of raising the College to the status of an independent University been fulfilled, or been likely in the near future, he would have stayed on; but the Government have definitely stated that they have no such intentions at present. Sir Bertram Windle has been President during an important period in the history of the College, in which it ceased to be the Queen's College, Cork, and became a constituent member of the federated National University. During his tenure the College has nearly doubled its buildings, nearly trebled its number of students, and has received donations amounting to over £100,000. His dream has been of a Cork University instead of a University College, which necessitates "incessant, unpleasant, and unnecessary work, and exhausting train journeys." The number of students on the books last session was 620; during the war, of past and present students, 354 served at the Front and twenty-nine died. The President, when he retires, is going to Canada, and will give a series of lectures at the Catholic College of Toronto University, on science and scholastic philosophy.

PRIZE COMPETITIONS.

IN the October competition "Bésigue" and "Catharine" are classed as equal. As the former was awarded the prize in January, the latter will receive it this time.

The winner of the September competition is Miss P. Smith, 28 Moray Place, Edinburgh. We have now received the name of the winner of the Translation Prize for July—viz., Mr. J. B. Fernald, 4 Marlborough Road, N.W.8.

Extract from Michelet's description of a meeting of the Cordeliers' Club.

By "CATHARINE."

Who is that yonder in the chair? In truth, 'tis horror's self! Dreadful is the countenance of this Danton! Is he Cyclops or infernal deity? That face, frightfully pitted with smallpox, with small dark eyes, seems a gloomy volcano. Nay, man he is not; rather the disturbing element itself; wild and whirling exaltation, doom-strokes, hover o'er him. Dismal genius, thou frightest me! Art thou to save or ruin France?

See, his mouth works; the windows rattle. "Marat may speak."

What! This Marat? This yellow creature, green-clad, eyes yellow-grey, and so protruding. . . . Batrachian, not human, its race would seem to be. What swamp has sent us this abortion? Yet there is gentleness in those eyes. Their brightness, clarity, and strangely wandering gaze, looking yet not beholding, present him as a visionary, deceiver yet deceived, claiming the gift of second-sight, a hedge-prophet, vain and especially credulous, believing all things and his own lies above all things—all the unwitting fictions to which his innate extravagance carries him. This cast of mind is due to habits of empiricism: to recollections of his huckstering employment. There will be a dreadful *crescendo*; he needs must discover, invent, proclaim from his gloomy abode a daily miracle at least: must lead his trembling adherents from treason to treason, discovery to discovery, horror to horror.

He thanks the meeting. Then his face lights up. A great and awful act of treachery, a new plot discovered! See, how he loves to tremble and to rouse tremors. See, how the vain and credulous creature is transformed! His sallow skin glistens with sweat.

* Replies to these advertisements should be addressed "No. —, c/o Mr. William Rice, 3 Ludgate Broadway, E.C.4." Each must contain sufficient loose stamps to cover postage on to advertiser. Post cards will NOT be sent on.

Considerations of space compel us to cut our notes short this month. "Bésigue's" version was the more accurate and even, "Catharine's," the more spirited, though we suspect that some of her phraseology will not commend itself to all our readers. Both started with a mistake; grammar and context alike require "what" for *qu'est-ce qui*. The sentence beginning "ses habitudes d'empirique" was the most difficult stile. We suggest: "His habits of life as a quack doctor and his practice as a cheap-Jack produce this trick of mind." The prize-winner apparently forgot that Marat carried on a newspaper: *cave* is the "cellar" where it was printed, and *abonnés* the "subscribers."

We classify the 80 versions received as follows:—

Class I.—(a) Catharine, Bésigue, Pre, Garnet, Boy, M.M., Amba, Ardeonaig.

(b) T.T., Priscilla, Jolande, Filia, Calvus, Mamble, Primrre, Gilbey, Nailil, Sarnia, Elise, Outis, Hesperus, Senex, Kodé, E.A.N.

Class II.—Playshaw, Civitas, Nil Desperandum, Pentire, A.S.C., Borealis, Menevia, B.G.T., Parade, Scarlet Pimpernel, White Heather, Ilex, Good Luck, Carlyle, Chymyny, Girondin, M.T.A., Richmond, Borderer, Llanandras, Sirach, Excelsior, W.W.M., C.R.S., Myrtille, Somewhen, Nibbidard, Novice, Bis, Aurora.

Class III.—M.M.M., Marie Antoinette, Anglaise, Maude, H.M., Aries, Serbia, Victoria, N.D., Candidus, Alan, Sylvie, Duchess, Avignon, Nautilus, Terpsichore, Genita, Presbyter, F.B., Pérance, Woodville, Fawcett.

Class IV.—Ella, Tom, Hermia, E.S.

A Prize of Two Guineas is offered for the best translation of the following extract from Renan's "L'Antéchrist":—

La manie furieuse de Néron était arrivée à son paroxysme. C'était la plus horrible aventure que le monde eût jamais connue. L'absolue nécessité des temps avait tout livré à un seul, à l'héritier du grand nom légendaire de César; un autre régime était impossible, et les provinces, d'ordinaire, se trouvaient assez bien de celui-ci; mais il recélait un immense danger. Quand le César perdait l'esprit, quand toutes les artères de sa pauvre tête, troublée

par un pouvoir inouï, éclataient en même temps, alors c'étaient des folies sans nom. On était livré à un monstre. Nul moyen de le chasser; sa garde, composée de Germains, qui avait tout à perdre s'il tombait, s'acharnait autour de lui; la bête acculée se baugeait et se défendait avec rage. Pour Néron, ce fut quelque chose à la fois d'épouvantable et de grotesque, de grandiose et d'absurde. Comme le César était fort lettré, sa folie fut principalement littéraire. Les rêves de tous les siècles, tous les poèmes, toutes les légendes, Bacchus et Sardanapale, Ninus et Priam, Troie et Babylone, Homère et la fade poésie du temps, ballottaient comme un chaos dans un pauvre cerveau d'artiste médiocre, mais très convaincu, à qui le hasard avait confié le pouvoir de réaliser toutes ses chimères. Qu'on se figure un homme à peu près aussi sensé que les héros de M. Victor Hugo, un personnage de mardi gras, un mélange de fou, de jocrisse et d'acteur, revêtu de la toute-puissance et chargé de gouverner le monde. Il n'avait pas la noire méchanceté de Domitien, l'amour du mal pour le mal; ce n'était pas non plus un extravagant comme Caligula; c'était un romantique consciencieux, un empereur d'opéra, un mélomane tremblant devant le parterre et le faisant trembler, ce que serait de nos jours un bourgeois dont le bon sens aurait été perverti par la lecture des poètes modernes et qui se croirait obligé d'imiter dans sa conduite Han d'Islande et les Burgraves. Le gouvernement étant la chose pratique par excellence, le romantisme y est tout à fait déplacé. Le romantisme est chez lui dans le domaine de l'art; mais l'action est l'inverse de l'art.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than ONCE during a given year, though the name of the competitor gaining the first place will be published each month.

All competitions must reach the Office by the first post on November 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C. 4.

THE NATIONAL COUNCIL OF WOMEN

Parliament Mansions, Victoria St., London, S.W. 1

Has extended its

BOOK & PAMPHLET DEPARTMENT

and is now prepared to supply books on all subjects of interest to women.

Call at the Office when in London.

Literature for sale at meetings supplied.

Orders by post promptly attended to.

Book lists supplied on receipt of stamped and addressed envelope.

TEACHERS OF GEOGRAPHY. ASSOCIATE, R.S.G.S.

With the object of helping to promote the teaching of Geography in Schools, "Teacher Associates" are admitted to certain privileges of the Royal Scottish Geographical Society at the reduced subscription of Half-a-Guinea. The privileges are limited to the use of the Society's Rooms, receipt of the Quarterly Magazine, the right to borrow from the Library, and one ticket for the Society's meetings. The Magazine will also be sent on the same terms to any School or College on receipt of a signed application from its Head. Prospectus and Syllabus of lectures may be had on application to the SECRETARY, Synod Hall, Castle Terrace, Edinburgh.

PARTNERSHIPS & TRANSFERS.

LADY wishes to purchase Girls' School. £3,000.—
The Bureau, 1 Sicilian House, W.C. 1.

PREPARATORY SCHOOL PARTNERSHIP,
WANTED BY CAMBRIDGE GRADUATE.
£4,000 would be paid down, and probably more later on. The School must be situated on or near the South Coast, or at a residential place such as Malvern or Leamington or Tunbridge Wells. Advertiser would also consider buying School outright.—Address: "CANTAB," The Bureau, 1 Sicilian House, London, W.C. 1.

SCHOOLS FOR TRANSFER in various districts.

EDUCATIONAL & SCHOLASTIC BUREAU, Sicilian House, W.C. 1.

Graduates and others introduced to Schools and Private Families. This department is under the management of a Registered Teacher of wide experience, and clients may rely upon prompt and courteous attention.

THE SECONDARY, TECHNICAL AND UNIVERSITY TEACHERS' INSURANCE SOCIETY

(The S.T.U.T.I.S.)

Registered under the Friendly Societies Act, 1896. Regd. No. 1424 London.
Approved under the National Insurance Act, 1911. Approval No. 261.

Chairman: Sir JOHN D. McCURE, LL.D., M.A.

All persons whose main work is teaching other than in Public Elementary Schools are eligible for membership of this Society.

STATE SECTION:—

The forthcoming Valuation will, it is expected, show that this Section is in a very strong position and that valuable additional benefits will be able to be offered to its members.

Members who have been insured for at least two years, and who are passing out of Insurance in consequence of the Superannuation Act, or of larger salaries, are entitled to become *Voluntary Contributors*, and thus share in the Additional Benefits which they themselves have helped to create.

DIVIDEND SECTION:—

This Section is independent of the State Section and is for the insurance of those teachers to whom the Insurance Act does not apply, or *who desire additional benefits*. It possesses the advantage of a Savings Bank (by the creation of Own Funds and Deposit Accounts), and offers at a very low cost Sick Benefits up to £3 3s. per week. Hitherto about two-thirds of the members' annual contributions have been returned to them each year by being placed to the credit of their Own Funds.

For information apply to the SECRETARY,
10 Mecklenburgh Square, London, W.C.1.

The Future Career Association.

(Established 1904.)

CONVEYANCING DEPARTMENT.

This Department is now under the direction of **Mr. F. C. NEEDES, B.A.**, whose experience, advice, and assistance are unreservedly placed at the disposal of **Publishers** free of charge.

TRANSFERS and PARTNERSHIPS arranged by correspondence or interview.

INSPECTIONS and VALUATIONS undertaken.

An **unusual opportunity** offers itself to a young energetic lady of good social position, with educational qualifications, to acquire a **partnership** in one of the best **Girls' Schools** near London. Sound investment, but monetary consideration of secondary importance.

FOR SALE (*inter alia*).

- 1.—**Ladies, possessed of capital and good educational qualifications** and experience, can hear of an excellent opportunity of acquiring a **good class and exclusive Boarding School** for Girls, with an income of about £10,000 p.a., and situate in most beautiful premises and grounds.
2. **North of England.—Flourishing Good Class Girls'—**Estab. 40 years. 22 Day Boarders. Fees £3 a term plus tuition fees. 141 Day. Fees from £2 7s. to £4 a term. Receipts 1918, £1,786. Net profits £562. Good premises—vendor's freehold—will sell for £1,450, mortgage arranged or will let. School has a splendid connexion and has a good reputation. Goodwill about £800. School furniture, &c., at valuation. Excellent chance for two or more ladies.
3. **Kent.—Flourishing Good Class Girls'.**—Situate in good Premises and Grounds. 18 Boarders. Fees 22 and 25 guineas a term. 100 Day Pupils. Fees 4½ and 6 guineas a term. K.G. (mornings only), 3 guineas a term. Receipts about £2,400. Vendor, who is retiring from the profession, will accept one term's Capitalisation Fees, and sell the School furniture, &c., at valuation. Personally investigated and highly recommended to any lady or ladies of good educational experience.
4. **West of England.—Flourishing Girls' Good Class Day.**—Connexion of about 50 Pupils. Receipts over £1,200 per annum. Good premises with every accommodation. Moderate rent. Goodwill £400 cash, or £500 by instalments. Furniture at valuation. Boarders might be transferred to suitable purchasers.
5. **To Principals on the South Coast** with good Schools and Premises.—A Lady, able to bring with her about 20 Pupils, all at good Fees, wishes to purchase a first-rate Girls' Boarding School situate in good premises and grounds, or will **amalgamate**.

Scholasque, Weststrand,
London.

SCHOOL TRANSFER DEPARTMENT.

Telephone:
Gerrard 7021.

Schools transferred and valued. No charge whatever will be made to vendors of Schools or School Partnerships by Messrs. GRIFFITHS, POWELL & SMITH unless a sale is effected or agreed upon. No commission charge whatever made to Purchasers of Schools or School Partnerships.

Applications from intending purchasers are solicited for the following properties:

GIRLS' SCHOOLS.

Wales.—Middle-class Boarding and Day School. Gross receipts past year £1,884. No. of Boarders 44, and 108 Day Pupils. Rent £120. Goodwill and School furniture £500.—No. 7,012.

Northants.—Successful Boarding and Day School. 154 Pupils, 47 of whom are Boarders. Prospectus terms about £50 for Boarders, and 2 to 4 guineas for Day Pupils. Any reasonable sum will be accepted for Goodwill, as the vendor must give up owing to death in family and other domestic reasons.—No. 7,016.

Devon.—Good-class Boarding and Day School. Gross receipts £1,300. No. of Boarders 15. Fees about £70. No. of Day Pupils 20. Fees 3 to 5 guineas. Rent £54. Vendor would accept one term's fees for Goodwill. School furniture £275.—No. 7,001.

Sussex.—Good-class Boarding and Day School. Gross receipts about £1,454. No. of Boarders about 22, and about 25 Day Pupils. Goodwill one term's fees. School furniture at valuation.—No. 7,011.

Hants.—Partnership in Boarding and Day School. 120 Pupils, 16 of whom are Boarders. Gross receipts about £1,500. Very nice premises. Terms of Partnership to be arranged.—No. 7,005.

Lancs.—Preparatory School for Girls and Kindergarten. Boys up to 10 years of age received. Gross receipts past year £603. No. of pupils 72. Rent only £55. Goodwill £200. Furniture at valuation.—No. 7,009.

Yorks.—Preparatory School for Boys. Established 35 years. Gross receipts past year £657. Net profit past year £200. Number of pupils 44, paying 3 to 5 guineas per term, without extras. Rent of good house with garden and play ground, only £60. Majority of boys are prepared for Public Schools. Price for Goodwill £400.—No. 7,016.

Somerset.—For disposal, owing to vendor having lost her eyesight, good class Day School for Girls. Conducted by present Principal 30 years. Gross receipts past year £900. Number of pupils, 30. Rent of large, well-situated house, with accommodation for boarders, £110. Price for Goodwill, school, and household furniture 500 guineas, or near offer.—No. 7,008.

Oxon.—Boarding and Day School for Girls. Established 40 years. Receipts past year £1,620. Net profits £500. 24 Boarders, 30 day pupils. Rent of well-built stone house £75. Goodwill about £500. Furniture at valuation.—No. 7,015.

Hants (Seaside).—Partnership in flourishing Boarding and Day School for Girls. Vendor wishes to retire after 20 years, having acquired a competency. Gross receipts past year £3,725 15s. Net profit about £600. There is a waiting list for Boarders for next term. Price for half-share of Goodwill £500. Furniture at valuation.—No. 7,007.

Salop.—Flourishing Boarding and Day School for Girls. Conducted by vendor 25 years. Gross receipts past year £1,035 17s. 3d. Net profits past year £369. 15 boarders, 35 day pupils. Rent of fine large, detached house, built for a school, and standing in its own grounds, £80. The low sum of £300 will be accepted for Goodwill. Furniture at valuation.—No. 7,020.

Hants (Seaside).—Girls' Boarding and Day School. Gross receipts £1,338. No. of Boarders 12, and 56 Day Pupils. Rent £80. Price for Goodwill £500 or near offer. School and household furniture at valuation.—No. 7,000.

Herefordshire.—Girls' Boarding and Day School with Kindergarten Department. Gross receipts about £1,400. No. of Boarders 24, and 10 Day Pupils. Rent of three houses £220. The vendor would accept one term's fees for Goodwill. Furniture at valuation.—No. 7,077.

For further details of the above, and particulars of other Schools for Sale and School Partnerships, address—

GRIFFITHS, POWELL & SMITH, School Transfer Dept., 12 and 13 Henrietta Street, Covent Garden, London, W.C.2.

BLACKIE & SON'S NEW LIST

Experience has proved that Messrs. BLACKIE & SON'S Books take a foremost place by reason of their scholarly editing, clear type, strong binding, and reasonableness in price.

THE GROUNDWORK OF BRITISH HISTORY.

By **GEORGE TOWNSEND WARNER, M.A.**, sometime Fellow of Jesus College, Cambridge; Master of the Modern Side in Harrow School; Author of "A Brief Survey of British History," &c., and **C. H. K. MARTEN, M.A.**, Balliol College, Oxford; Assistant Master at Eton College. With Maps, Time Charts, and Full Index. 764 pp., super-crown, 8vo, 7s. 6d. net. Complete in One Volume.

In Two Parts, 4s. 6d. each net. Part I, B.C. 55-1603; Part II, 1603-1911.

For the convenience of those requiring the book for certain examinations it is also issued—

In Three Sections, 3s. 6d. each net:—Section I, 55 B.C.-1485 A.D.; Section II, 1485-1714; Section III, 1714-1911.

SCIENTIFIC METHOD ITS PHILOSOPHY AND ITS PRACTICE.

By **F. W. WESTAWAY**. New and Revised Edition. 10s. 6d. net.

At the present time, when science touches life at so many points, and so much of human energy and intelligence is given up to its pursuit and advancement, there is a clamant need for a book explaining the fundamental principles of scientific investigation. Such a book is here provided. To make the book as useful as possible to the greatest number of students and scientists, it has been found necessary to discuss the philosophic notions on which the developing Scientific Method of to-day is based.

A FIRST COURSE OF LABORATORY EXERCISES IN PHYSICS.

By **DAVID BAIRD, M.A.**, Science Master, Greenock Academy. 1s. 6d. net.

This Course of Laboratory Exercises in Physics is designed for pupils in the first two years of their experimental work in Physics.

THE GOLDEN BOOKS OF ENGLISH VERSE.

A Graduated Course for Class study. Arranged by **FRANK JONES, B.A.**, Senior English Master, King Edward's School, Aston, Birmingham. In Three Books. Book II, now ready. 2s. net. Books I and III, in preparation.

The chief feature of this series is the teaching apparatus provided at the end of each poem. The objects kept in view in drawing up these aids have been to save the teacher's time, and to provide the pupils with an instrument by which they might test the thoroughness or otherwise of their understanding of the poem studied. Each teacher will no doubt supplement them as necessity arises; and to the pupils who have studied a poem in order to answer the questions asked, the aids will suggest other points for further consideration with the help of the teacher.

A LATIN GRAMMAR FOR BEGINNERS.

By **A. M. DALE, B.A.(Lond.)**. 2s. 6d. net.

This is a book for pupils beginning Latin at the age of twelve or thirteen, and is intended to cover the first year's work. The aim throughout has been to make use at once, in writing or speech, of every new piece of knowledge acquired in the lessons. The Exercise section is a most important part of the book, and is meant to afford ample practice from the very beginning in sentence-analysis and sentence-construction.

A BOOK OF ENGLISH HISTORY FOR CHILDREN. Part I.

By **LILIAS MILROY**, Head Mistress of the Leamington High School for Girls, and **ELIZABETH M. BROWNE**, formerly Assistant Mistress in the Truro High School for Girls. 2s. 6d. net.

This history book seeks to steer a course between those mere "outlines," which are bound to be lacking in interest for young children, and the books of stories from history, often delightful to the readers, but apt to be rather too bulky for use as textbooks. The aim of the authors has been to select carefully the more important movements and the more picturesque incidents of history, and in connexion with these to give those ample details which children love, and at the same time to preserve a clear chronological sequence.

A NEW GRAMMAR BOOK.

By **AGNES CATNACH, B.A.(Lond.)**, Assistant Mistress at King Edward's Girls' High School, Birmingham. 2s. 6d. net.

This book seeks to connect more closely the formal study of language with adequate expression of thought, and to attain this end all the work is based on the study of the sentence. It is hoped that to children studying on these lines English Grammar will be a subject of living interest and that the various facts of grammar will gain that logical connexion which they so often seem to lack.

The matter has been set forth as simply as possible, and in a manner to retain the interest of the pupil.

THE WARWICK SHAKESPEARE.

General Editor—**Prof. G. H. HERFORD, Litt.D.**

Professor of English Language and Literature in the University of Manchester; Examiner of English in London University.

The chief characteristic of this well-known edition is the prominence given to the literary and æsthetic view. The text of each play is accompanied by an Introduction, Notes, Glossary, and an Essay upon Metre. The Introduction is divided into clearly marked sections, the literary and critical matter being thus separated from questions of date, authorship, &c.

The WARWICK SHAKESPEARE holds place as the standard edition for the more advanced study of Shakespeare as literature, and is now universally recognized as the best annotated edition for school use. Crown 8vo, cloth boards. 2s. net each.

THE JUNIOR SCHOOL SHAKESPEARE.

A series of the greater Plays, edited, with Introduction, Notes, &c., by Experienced Scholars, for Junior Students and Junior Candidates in the University Local Examinations. Clearly printed and neatly bound in limp cloth covers. With Coloured Frontispiece. 10d. each.

BLACKIE'S LONGER FRENCH TEXTS.

From Modern French Literature. Printed in large, clear type, with brief Notes, Exercises, Phrase List, and Vocabulary. Fcap. 8vo, 10d. net each.

LE LIVRE ROUGE.

A First Book of French in Coloured Pictures. By **E. MAGEE**, Edgbaston High School for Girls, Birmingham. With many full-page Coloured Pictures and other Illustrations. Fcap. 4to. 2s. 6d.

THE PLAIN-TEXT SHAKESPEARE.

A neat edition of the greater plays of Shakespeare, presented in a serviceable form at a cheap price. The text follows the well-known Junior School Shakespeare, which omits everything that might be thought undesirable in class reading. Cloth covers, 7d. each.

BLACKIE'S LITTLE FRENCH CLASSICS.

Representing all important French Authors from Montaigne to Bourget. Fcap. 8vo. 6d. each.

LE LIVRE BLEU.

A Second Book of French in Coloured Pictures. By **E. MAGEE**. With sixteen full-page Coloured Pictures and many other Illustrations. 2s. 6d.

A SURVEY OF MODERN HISTORY.

By **H. W. HODGES, M.A., F.R.Hist.S.**

Late Exhibitor of Lincoln College, Oxford; Head of History and English Department, Royal Naval College, Dartmouth. 6s. net.

This textbook of the history of the nineteenth century is intended for use in preparation. It provides the student with such a material background as should enable him to understand the history teacher's lectures on the subject, and estimate rightly the relative importance of the various happenings.

Prospectus post free on application.

CORRESPONDENCE.

"SCHOOL GRAMMAR OF PRESENT-DAY FRENCH."

To the Editors of *The Journal of Education and School World*.

DEAR SIRs,—In giving an account of my "School Grammar of Present-day French" your reviewer asks what authority I have for qualifying with the word "usually" the "ordinary rule" that the conjunctions *à moins que, bien que, afin que, avant que, sans que, &c.* (to the number of sixteen or more), introduce clauses in the subjunctive mood. My grammar is founded not on "authorities," but on the documentary evidence available as to the present state of development of the French language. May I, through your columns, make it known that I shall be grateful to any of your readers who will communicate to me any departures from "ordinary rules" which they come across in the course of their reading, and, as the particular point raised by your critic is not without interest, may I quote a few examples out of a number which I have at hand in order to justify my reluctance to dogmatize? *Modern Language Teaching* reprinted from *Le Temps* in December 1916:

"Plus tard, plus tard, enfant de demain, toi pour qui
Ces vaillants seront morts *avant que tu naquis*. . . ."

It may be argued that here the necessities of rhyme seduced a prentice poet from the narrow path of "correct grammar," but the following quotations are not open to this objection:

"Je vous promets de les chercher, *bien que cela me paraît difficile*" (H. Malot). "Dans la Provence, ces troubles avaient été plus sérieux, *quoique* leurs causes furent purement locales" (H. Martin). "*Si peu que nous en dirions*, nous en dirions trop" (Journal). "Un mois tout entier se passa *sans qu'elle* ni moi nous nous donnâmes signe de vie" (Courteline). ". . . *Bien que*, dans la Préface de Germinie Lacerteux, on croit saisir un reflet du socialisme de 1848" (A. Delzant). I abstain, of course, from quotations such as "Je lui dis: 'Peut-être qu'on peut se marier *malgré qu'on est* infirme,'" (M. Audoux), which are borrowed from the speech of the people. It would avail nothing to plead that the sentences quoted above are "incorrect." We have no title to pass judgment on the syntax of Henri Martin or Hector Malot, to approve or to condemn; but what they have written they have written, and it must be recorded.

May I also mention that verbs of "feeling," referred to by your reviewer as "missing," are fully dealt with in Section 379, and that verbs of "knowing" and "thinking" used affirmatively are treated and exemplified in Sections 373 and 374? I have delivered the usual goods, but the labels are perhaps new and unfamiliar. Lastly, I wish to thank your reviewer for pointing out a statement on page 173 which is certainly awkwardly expressed and hardly intelligible. It would be clearer if written "[Certain conjunctions] are regularly followed by a verb in the 'future in the past' tenses of the indicative." The quotation marks would perhaps remove the ambiguity.—Yours faithfully,
J. E. MANSION.

20 Sudbrooke Road, S.W.12.

To the Editors of *The Journal of Education and School World*.

DEAR SIRs,—Mr. Mansion is quite right in saying that *à moins que, bien que, afin que*, and others, "usually" take the subjunctive. Plattner, in his "Ausführliche Grammatik der französischen Sprache," II, 3, page 55, quotes several instances where the subjunctive is not used: "*Quoique nous en donnons*" (J. Mouton); "*quoique leurs causes furent locales*" (H. Martin); "*bien que cela me paraît*" (H. Malot); "*quoique ça ne m'étonnerait pas*" (C. Bias); "*malgré qu'il avait de grosses pattes*" (A. Bauquenne); "*bien que nous en eûmes le droit*" (R. Maizeroy).

And here is a sentence I take from Charles Monselet, "Les Originaux du siècle dernier" (Dorvigny): "Ce fait n'est pas absolument prouvé, *quoiqu'il n'aurait eu* malheureusement rien d'étonnant."—Yours truly,
C. F. HERDENER.

Hatfield College, Durham.

October 9, 1919.

To the Editors of *The Journal of Education and School World*.

DEAR SIRs,—I am obliged to you for giving me an opportunity to reply to the letters of Mr. Mansion and Mr. Herdener. Their researches will no doubt be interesting to scholars, but the question is what is to be taught to schoolboys and schoolgirls, for Mr. Mansion's book is, according to the preface, designed "for the middle and senior forms of secondary schools." Does Mr. Mansion think that boys and girls ought to be taught that *bien que*

and *quoique* take the subjunctive only "usually"? Does he hold that an examiner ought to accept the indicative after *avant que* or *sans que*?

Littre does not recognize any mood but the subjunctive after any of the sixteen conjunctions, except, of course, *jusqu'à ce que*, and *sans que* in seventeenth-century French. Surely the degree of exactitude which is good enough for Littre is good enough for English schoolboys.

The conjunctions in question number fifteen; your correspondents quote instances of the indicative and conditional after four of them (*malgré que* and *si peu que* are not in the list under discussion). What about the other eleven?

But the really vital question is: are the instances quoted to be regarded as legitimate exceptions to the normal usage or as mere eccentricities and curiosities? It is on this point that one would like to hear the opinion of some of these "authorities," whom Mr. Mansion thinks it unnecessary to quote, although he says in his preface that he has consulted them all. Perhaps we ought not to condemn the syntax of French authors, but French grammarians certainly may. A usage is not necessarily legitimate in a language, least of all for foreigners, because one or two cases of it may be found by diligent search amongst authors of all ranks.

As regards Mr. Mansion's other point, my view was, and is, that his treatment of the subjunctive, though very instructive, is not calculated to give clear guidance to young people.—Yours, &c.,

THE REVIEWER.

THE RELIGIOUS AND SOCIAL TRAINING OF CLUB WORKERS.

To the Editors of *The Journal of Education and School World*.

SIRS,—The need for recreation huts and canteens which has been emphasized by the War has brought greatly to the fore the whole problem of club leadership, whether amongst men or women. Such work has often proved ineffective in the past, in spite of much enthusiasm on the part of the workers, through a lack of understanding of the social problems involved, which is largely due to inadequate training. Even where such training has been efficient on the social side, it has often been purely secular, and the religious work, if attempted at all, sometimes fails for lack of proper preparation and opportunity for previous thought and study.

Extensive developments are likely to take place in the future, both in adult and juvenile organizations of all kinds. This is evidenced by the formation of juvenile organization committees, civic recreation councils, &c. The importance of adequate equipment of club workers cannot, therefore, be over-estimated.

The most valuable social work must be fundamentally personal, and this makes great demands on the workers themselves. To help to meet these demands a Board of widely representative and inter-denominational character has been created to promote the religious and social training of club-workers, both women and men.

This Board proposes to grant (1) a diploma, (2) a certificate, to all those who have passed a sufficiently high standard of training in divinity and in social theory and practice; and to keep a register of those so qualified, which may be of use to organizations requiring workers. The social training, where possible, will be that already existing in University departments, and will be in close touch with some settlement or other social institution where general experience in social work, including clubs, can be obtained. The religious study will be undertaken under the guidance of tutors, and, where possible, in connexion with courses of lectures and discussion classes. Its aim will be the practical application of Christianity to the social problems of the day.

It is expected that during this important period of reconstruction many will feel the need of better preparation for the calls about to be made upon them. It is hoped these will be able to avail themselves during the autumn of this year, and in the future, of the help and guidance offered to them by the Board.

Further details as to facilities for local lectures, tuition, books, fees, &c., can be obtained from the Tutor and Secretary, Miss M. West, 15 Wimpole Street, Cavendish Square, London, W.1.

Contributions are urgently needed, and can be sent to the Secretary.

NATIONAL HOME-READING UNION.

To the Editors of *The Journal of Education and School World*.

SIRS,—I desire to invite continued sympathy and support for the National Home-Reading Union, which, after encountering the many difficulties of five war sessions, enters upon its thirty-first year with steadily enlarging opportunities for its work and a deepened sense of its importance.

Its aim is to turn the power of reading to the best personal and social uses so as to make it a household joy and a help towards the conduct of daily life. Its main work is among the nation at home and in several of the Overseas Dominions. During the war it extended its activities in close co-operation with the Y.M.C.A. and the Y.W.C.A., not only among munition workers in this country, but among the forces in Great Britain, France, and elsewhere, particularly in camps and military hospitals. It is now prepared to continue this work among demobilized men and women and repatriated prisoners of war.

Courses of reading, pursued at the suggestion and with the active help of the Union, have proved a powerful antidote to the spirit of unrest and an aid towards carrying on National Service cheerfully, steadily, and effectively; and the Union claims to be helping in no small measure to maintain in the present, and to secure for the future, a standard of high thought, intelligent interest, and true patriotism.

I appeal for enlarged membership, for material support, and, above all, for personal service in carrying on our high aims. The Secretary, 12 York Buildings, London, W.C.2, will gratefully receive donations, large or small, towards the Union's slender funds, and will gladly supply further information as to its work and methods to any one who is interested in its aims and desires to further them.—I am, Sirs, yours faithfully,

October, 1919.

J. W. MACKAIL.

"WHY ARE NOT MODERN LANGUAGES RESPECTED?"

To the Editors of *The Journal of Education and School World*.

DEAR SIRS,—In the valuable article contributed to your August issue by Mr. G. F. Bridge, he omitted to name one of the causes why modern languages are despised as elements in a liberal education. This cause is the exceedingly low standard set at public examinations. It is not so very long ago that a correspondent wrote to the *Times*, saying that he had given the Army French paper to his daughter of twelve, who gained over 60 per cent. of the marks. The standard since then has by no means been raised. The same may be said of the French papers of the London Matriculation Examination and other entrance examinations of the same nature. They fall far below the standard of twenty years ago. The consequence is that students despise the subject, as they think that any duffer can pass in it, and they give their time to more difficult studies. It is only a step from despising a subject to despising the teacher of it. In comparatively few boys' schools are modern languages taken seriously. There are a few outstanding English teachers, who have qualified themselves by hard study at home and by residence abroad, who insist on getting good work out of their pupils, but the number is not great; and the number of Frenchmen who are able to do the same is fewer still.

X. Y. Z.

MINOR NOTICES.

CLASSICS.

- (1) *Virgil: Aeneid X.* By PAPILLON and HAIGH. (2s.)
- (2) *Virgil: Aeneid V.* By C. E. FREEMAN. (1s. 9d.)
- (3) *Horace: Select Odes.* By J. JACKSON. (1s. 9d.) (Clarendon Press.)

We group these three books together, as they are school books. By contrast with Mr. Fowler's book they are as water to wine. He treats Virgil as poetry, as grand art; they treat their authors as poetry for elementary students, for beginners. He is a *prophetes*, they are *paedagogi*. Let us admit that they are very good *paedagogi*. All three are on the same lines, with introduction, text, notes, and vocabulary. Papillon and Haigh's book is somewhat more advanced than the others. It is for senior students: they belong to the "New Oxford Junior Latin Series for Beginners." "Aeneid X" is not as good a book for beginners as "Aeneid V." It tells of the fighting and deaths of Pallas, Mezentius, and Lausus, but the book as a whole is not so self-contained as V, which tells the story of Aeneas' second visit to Sicily, and has a unity of its own. Papillon and Haigh's edition is a reprint simplified from their well known standard edition of the whole poem. On page 17 Aen. XII 722 should be 772. Mr. Freeman has an excellent intro-

duction, showing the importance of Book V in the development of the poem and of the character of Aeneas, and Mr. Jackson has made a good selection of twenty-five of Horace's Odes for beginners. We wish Mr. Freeman would not say "after" when he means "depending on" (lines 163, 370). "*Enim*: emphatic" (line 395) is not a helpful note. On page 100, *pulcherrima* is in the regular position of an adjective qualifying a noun antecedent; *cultu* is better ablative of respect, and *namque* is fourth word, not third. Mr. Jackson seems to overlook the fact that *dum* "while" regularly takes the historic present (II, 10), *superstiti* (III, 12) is proleptic, *corporibus* (XIII, 15) is governed both by *nocentem* and by *metuenus*; in XXV, 10-14, the *qua* clauses, not too well expressed by Horace, are better taken with *ex humili* than with *deduxisse*. He gives the names of only two metres; why not that of the Asclepiad, which is very common, as well as of the others? The marking of the vowels in the vocabularies is not satisfactory. Mr. Jackson talks of vowels being lengthened by position, and although the others do not make this mistake they all refrain from marking long vowels before two consonants. Mistakes are made in the following:—In Aeneid X, *dē-cido*, *dē-cutio*, *dē-decus*, *dē-sino*, *dē-mitto*; in Aeneid V, *hōnōs* as well as *honor* (cp. line 763); in Horace, *adlūtum*, *bāca*, *phasēlus*. In compounds of *iacio* the first syllable is long, e.g. *ōbicio*.

A Latin Grammar for Beginners. By A. M. DALE.
(2s. 6d. net. Blackie.)

This book has been specially written for first year pupils, and contains some good features, e.g. the printing of endings in thick type in the case of the declension of nouns and conjugation of verbs. Long quantities are marked, but upon no system—sometimes we have *nāvis* and at others *navis*; *virtūs*, *-ūtis*, but *tempestas*, *-ātis*. The book is in two parts: Part I contains Grammar and Vocabularies, and Part II Exercises. These last are of the familiar disconnected type, in which no human boy could possibly take any interest. But Part I is better, and makes a special feature of stressing the inflected nature of the Latin language.

Speeches from Thucydides selected from Jowett's Translation.
(1s. net. Clarendon Press.)

It was a good idea of Prof. Murray to gather together the speeches of Thucydides, and to publish them with a foreword directing attention to the parallels between the Peloponnesian War and the recent Great War. The present volume reproduces Jowett's translation, and is meant for the English reader, who will thereby be reminded of what every Greek scholar knows—that the history of Thucydides is a *κρήμα ἐς αἰῶνα* in a sense more far-reaching than the author himself realized when he wrote those words. The principles, for example, manifested by the famous Melian Dialogue, are identically the same as the principles of *Realpolitik*, and there are many other most illuminating points of similarity both between Sparta and Germany, and also—none the less worthy of our attention—between Germany and Athens. And yet we are told that the Classics are dead!

Elementary Latin Translation Book. By the Rev. Dr. A. E. HILLARD and C. G. BOTTING. (2s. 9d. Rivingtons.)

We welcome this book not only because many teachers will find it very useful, but also as a sign of improved methods of teaching. It consists of simple stories—adventures of Ulysses, the labours of Hercules, stories about Croesus, Phaethon, &c.—which have been specially written in such a way as to employ no grammatical form or construction with which the pupil is not already acquainted, and, of course, new forms are gradually introduced instead of having to be assimilated *en masse* at the beginning before the pupil starts any translation. This is the right method, and we hope the book will be widely used.

EDUCATION.

Mental Conflicts and Misconduct. By WILLIAM HEALY.
(10s. 6d. net. Kegan Paul.)

Mr. Healy is the Director of the Psychopathic Institute in connexion with the Juvenile Court at Chicago. Accordingly, he has had exceptional opportunities of studying juvenile delinquency in all its forms. The book is rather an exposition of a certain number of definite cases—forty, to be exact—with a running commentary on each, than the elaboration of a theory illustrated by relevant cases. There is this great advantage in the method adopted, that there is no temptation to maintain a thesis at all costs. The reader is not left without guidance, for the first four chapters give a general statement of the standpoint adopted and the methods applied. Mr. Healy is in general agreement with the psychoanalysts, but declines to follow them all the way. His contribution cannot but be received by them as a valuable contribution of subject-matter, even if they have to suggest explanations that he cannot accept. Mr. Healy declines to adopt the Freudian view of the sex question, but Freudians will chuckle as they read case after

case, and note that Mr. Healy finds it practically impossible to keep sex out. The plain reader who considers merely the cases submitted will almost inevitably rise with the theory that sex disturbances are the root of all forms of misconduct, these forms being ways in which the sex *δρμή* gains an indirect satisfaction. A pleasing feature of the book is the number of cases in which the author's treatment has resulted in a cure. Too many writers on this subject seem to content themselves with a cold statement of the facts. Mr. Healy has a living interest in the improvement of his patients. The book will be found of great practical value by those who are responsible for young people of all degrees of delinquency.

An Inquiry concerning the Principles of Natural Knowledge.
By Prof. A. N. WHITEHEAD. (12s. 6d. net. Cambridge University Press.)

We have here a book the value of which it is difficult to overestimate. It points to a reconstruction of our metaphysical views as radical as that effected by Kant. Prof. Whitehead appears to regard his work as a sort of introductory chapter to the study of physics. Hitherto we have taken too much for granted the independent existence of points in space and moments in time, and have worked on the assumption that time and space have an independent existence, and may be treated apart from each other. By an original interpretation of the theory of relativity developed by Einstein and others, Prof. Whitehead sustains the thesis that this separation and this abstraction are illegitimate, and that we must found our scientific conceptions on a first-hand, immediate, direct perception. Kant no doubt recognized the interdependence of time and space as elements of knowledge, but his unification came from within, from the mind, whereas Prof. Whitehead finds the unity existing by its own right in the outer world. If he is right the spectre of the Ding-an-sich is laid for ever, and we are able to make advances in safety, if not in comfort, by means of the concept that the unit of knowledge is the event, in which time and space find their unity since neither of them can have meaning or indeed existence apart from the other. In Prof. Whitehead we have the ideal combination of rich and varied knowledge of science, a natural gift for metaphysical investigation, and an abundant store of common sense. It is gratifying to find the preacher of such revolutionary doctrine dealing so respectfully with the standard authorities whose theories he appears to destroy, though no doubt he would modestly claim that he is merely developing those theories and bringing out their full meaning. The absence of dogmatism is evidenced by the confession, of which the author is in no way ashamed, that the book "raises more difficulties than those which it professes to settle."

The Teaching of Science in the Elementary School. By G. H. TRAFTON. (6s. 6d. net. Constable.)

The editor of the "Riverside Textbooks in Education," to which series this volume belongs, says that the author's object was "to construct a simple and helpful volume for the teacher who is called upon to teach elementary science lessons, and yet has neither scientific training nor apparatus for the work." In this country, at least, it is agreed that, without some scientific training and some practice in handwork, no teacher should undertake to teach science. But, in the United States, from which country the book comes, it is evidently considered possible for a teacher to obtain all the guidance necessary from a single book prepared for the purpose. Mr. Trafton, though we think he has attempted an impossible task, provides useful series of schedules of instruction and a variety of useful hints which may be commended for their suggestiveness to teachers of science who have received some previous training and already gained some experience in teaching science. The subjects dealt with by Mr. Trafton include Nature Study, Agriculture, and Hygiene, with some reference to Physics and Chemistry.

Education for the Needs of Life. A Textbook in the Principles of Education. By Dr. J. E. MILLER. (7s. net. Macmillan.)

The purpose of this volume is to meet the needs of the education classes in normal schools. The success of its author's "Psychology of Thinking" is a sufficient guarantee of his fitness for the task he has set himself. The six chapters bear the titles: I, "The Biological Point of View"; II, "The Meaning and Aim of Education"; III, "The Child"; IV, "The Curriculum"; V, "The Principles of Method"; VI, "The Teacher." We have thus a very practical presentation of the matters that really count in the professional training of teachers. The perfect correlation of theory and practice may be frankly admitted to be beyond the power of the best of us, but we may safely maintain that we get here an unusually close approximation to the ideal. A distinctive feature of the book is the series of questions with which each chapter opens. Their purpose is not to test the reader, but to induce in his mind that "set" on which Prof. Thorndike lays so much stress as a condition favourable to learning. Particularly praiseworthy is Dr. Miller's exposition of the use of the term *function*; his treatment

will save students from a confusion of thought that examination scripts show to be very widespread. A new and most useful point is made in exposing the danger of the "blind alley" in the fixed curriculum. The chapters on the child and on the teacher skillfully complement each other, though there is more new matter on the teacher than on the pupil. Method gets the longest chapter—nearly one hundred pages—but it is as fresh and as free from pedantry as the rest of the book, which is high praise.

Modern Ideas and Methods for School Teachers and Students in Training. By JOHN EADES. (3s. 6d. net. E. J. Arnold.)

Mr. Eades tells us that his book is not intended to supplant but to supplement the ordinary book on school method. Further on he remarks that "it is theory and practice combined." Accordingly we looked to find another of those gallant attempts to combine two things that so obstinately refuse to mingle. The text, however, gives us nothing of the kind. It consists of a series of more or less disconnected "notes" made by a practical teacher. Chapter I consists of 86 pages of General Notes that read like educational table talk. The remaining fifteen chapters deal each with a separate subject of the curriculum, but in a very brief and unsystematic way. The general effect of the book is one of scrappiness. There is an absence of any unifying principle, or guiding line. Yet the matter is in itself thoroughly sound and the *obiter dicta* are evidently based on wide and intelligent reading and considerable experience. It is quite likely that young readers may be attracted by the rapid change of subject and by the interesting way in which the writer expresses himself. The book certainly justifies its claim to rank as a useful adjunct to a drier and more systematic textbook.

Schools of To-Morrow in England. By JOSEPHINE RANSOM. (1s. 6d. net. Bell.)

We reciprocate heartily Miss Ransom's hope that nothing will ever interfere in England with the freedom that now exists for enterprise in educational work. Educational experiments and research deserve every encouragement, but it is important that teachers undertaking them should be adequately prepared for this pioneer work by full knowledge of the experience already gained and of the principles which previous workers have elucidated. This has hitherto not been always the case; and it may well be believed that, if some of the "pioneers" of whom Miss Ransom writes with somewhat unrestrained enthusiasm had taken rather more pains with their preliminary preparation, they would have been saved some of their early mistakes. Enthusiasts for this or that subject in the curriculum, for this or that out-of-school pursuit, are apt to lose perspective, and to glorify unduly their own particular hobby. The result too often is that what may well be a most valuable auxiliary help in the sane, all-round business of education is glorified until the attempt is made to give it what it can never occupy satisfactorily—the basal and essential position in the curriculum. While we would encourage every teacher to question and test all methods of procedure, we would beg them to temper their enthusiasm with discretion. Miss Ransom provides a series of interesting impressions of a number of schools where useful work is being done on more or less original lines, and we commend these sketches to the attention of our readers.

ENGLISH.

(1) *A New Grammar Book.* By AGNES CATNACH. (2s. 6d. net. Blackie.) (2) *Concise English Course.* By A. MERCER. (1s. 6d. net. McDougall.)

The first of these quite elementary textbooks is an attempt to make English grammar a subject of real and living interest for the children who read it. Assume that this is possible, and the author should not fall far short of success, for the various facts of grammar are carefully welded into a connected whole by argument which perhaps suffers from over-elaboration. The matter is good, except on two points: far too much stress is laid upon the predicate and detailed analysis, and the recommendations of the Joint Committee on Grammatical Terminology are treated as though they were the last word on the question, whereas they are open to criticism and are not often fully adopted. But many practical teachers believe that reasoned textbooks are of little value in language teaching; they depend upon oral work, and ask for books merely to serve as notes and to supply examples. For these the second, but for two perhaps minor blemishes, would be almost ideal. The writer has tried to include too many subdivisions of his subject in the space at his command, with the result that in one or two places his treatment, even in what is clearly meant to be little more than a notebook, is scrappy. He is out of date in certain details, and his statements are essentially incomplete in others. There are no "articles" in English to-day. Still, for the capable teacher who depends upon his class work for results, and asks only for a lessening of blackboard work and note-dictating,

the book is good. There ought to have been at least twice as many exercises in the second book; those in the first are utterly inadequate.

FRENCH.

A Short History of French Literature. By W. H. HUDSON. (6s. net. Bell.)

To write a readable and instructive history of French literature in three hundred pages is no easy task, but Mr. Hudson, who, to the great loss of the popular extension of knowledge, died in August, 1918, has achieved the feat. His volume is—what histories of literature so seldom are—a real live book, the product of a fresh and lively mind, and it will be found a serviceable guide by those who wish to acquire a good working knowledge of the subject for the purposes of their own pleasure and mental improvement. To those who know Mr. Hudson's other works, it is scarcely necessary to say that his criticism of the French writers is always sane and well-balanced. He has a keen eye for merits and defects alike. He is at his best, we think, in his accounts of great prose writers—Montaigne, for example, and Pascal, Voltaire, Diderot, Ste Beuve. In dealing with French literature prior to 1660, he has confined himself to very narrow limits—wisely, we think, for, as he says in his preface, it is modern literature which has the greatest interest for the men and women of to-day. Throughout his work, indeed, he has laid most stress on the works which are actually read; thus he dismisses Montesquieu's "Grandeur et Décadence" and "Esprit des Lois" in a line as "technical treatises which do not properly concern us here," but he gives a page to the "Lettres Persanes." He does well, no doubt, for his book is meant for the ordinary reader rather than for the advanced student; but we cannot help thinking that when he reaches the nineteenth century—the literature of which, by the way, claims 130 out of 300 pages—he carries the principle a little far. Paul de Koch, for instance, gets thirteen lines and Labiche half a page, while Tocqueville, Michelet, Thiers, and Lamennais are merely mentioned; and though Renan and Taine are treated better, this portion of the work is little more than a guide to poetry, drama, and fiction. But as such it has much value, and it is brought well up to date, the last work mentioned being Anatole France's "L'Île des Pingouins" (1909). Alphonse Daudet was evidently the author's favourite novelist, and we have no quarrel with his taste. An appreciative memoir of the author by Prof. Jack is prefixed to the volume.

GEOGRAPHY.

The "Daily Telegraph" Victory Atlas of the World. Part I. (1s. 3d. net. Geographia.)

As a result of the Great War, many atlases and maps now in use will have to be scrapped; the publishers of this atlas are, therefore, to be commended for their foresight and enterprise in having ready a work of such a comprehensive character so soon after the conclusion of peace. Part I of this Atlas, just published, contains three large maps (26 by 20 in.) namely: Australia (physical), South West Spain (political), and Germany (political and historical). Although the maps are full of detail, every feature can be read without difficulty; the towns and cities are printed in different kinds of type to show their relative importance, and the chief roads and railways are also inserted. When considering a new atlas, a reader naturally insists on the work being up to date, and at the present time the map of Germany offers a good test of this important requirement. The editor of the Victory Atlas was, therefore, wise in selecting Germany as one of the maps in Part I. This map shows the territorial changes according to the Peace Treaty of June last; the territories taken from Germany are shown in different colours, in order to indicate the power to which each now belongs. Three inset maps on this sheet show the zones of the Armies of Occupation, the areas to be evacuated after a certain number of years, and the growth of Prussia from 1740. The student is able thus to see at a glance first how Prussia developed into modern Germany, and, secondly, what has happened to Germany in consequence of the Great War. The physical map of Australia presents a contrast to the political maps. With a few contours distinctly marked and with effective colouring, the relief of the continent is strikingly shown, while the development of Australia as regards railways and goldfields is clearly indicated.

A copy of the Victory Atlas should certainly be available for reference in every school. It would also be an advantage to have the maps in separate sheets, as now published, for they are large enough to be used for teaching fairly large classes.

Map of London in Relief. By GEO. R. GILL. (6d. Gill.)

This is a very useful hand-map of the London District, and it includes within its limits St. Albans, Reading, Redhill and Gravesend. The relief is particularly well shown by means of hill shading, the gaps in the North Downs being clearly indicated. Forests.

(Continued on page 768.)

THE NORMAL WAY.

By A. MOTHERSOLE, A.C.P.,

A Normal Silver Medallist and Prize Winner.

YOU have been told there is no "royal road" to knowledge.

I'm not going to say there is; but there's an easier way than many people think, and **THAT IS THE NORMAL WAY.**

Normal students know it, and scoop up examination honours; but, as a Teacher, I should like my colleagues who are *not* Normal students to know something of the efficient and interesting methods of the NORMAL CORRESPONDENCE COLLEGE.

You are thinking of studying under these Tutors? Let me tell you what will happen.

Your work will be arranged for you. There will be no searching through syllabuses and text-books. You will not do a minute's unnecessary work if you follow the Normal.

You will be told what to read—in text-books of your own choice. You will have explanations of difficulties sent you on well-printed papers, all brought up to date. You will know who your Tutor is and his qualifications.

You will be examined, but examined with one aim—that of passing. For the "Normal" tests your newly gained knowledge, corrects your exercises—corrects them intelligently, and with the minimum of work on your part. Everything possible will be done for you.

You commence:—

- i. When you wish;
- ii. At whatever stage you wish; and
- iii. You work at your own rate.

If the Tutors think you could do better, they keep you to your best effort. You don't mind that, though, do you?

The examination will come; you will feel confident and assured. You will know how to write an examination answer—to get the maximum of marks with the minimum of worry.

Will you pass? you say.

I have been through it all, and I say, give the Normal a chance and you will pass.

Possibly, like hundreds of others, you will get your fees back from the Normal money prizes; at any rate, you will have had a splendid education during your spare time at a small cost.

Why miss such a chance?

NORMAL CORRESPONDENCE COLLEGE.

Melford Road, East Dulwich, S.E. 22; and Avondale Square, London, S.E. 1.

and parks are tinted green, the rivers are drawn with blue, and the roads with yellow lines. No distinction is made between main and the less important roads. The main road from London to Tonbridge is marked as far as Farnborough, but the section from Farnborough over Polhill and through Sevenoaks is omitted.

HISTORY.

India's Nation Builders. By D. N. BANNERJEA. (7s. 6d. net. Headley.)

The presumptuous title, the preface, the introduction, and the selection and arrangement of the contents all stamp this book as a political pamphlet. It is ostensibly a collection of character sketches of fifteen persons, of whom eight are, like the author, natives of Bengal. One is a Parsee, an exceptional member of a level-headed community whose "intensive specialization in business and commercial activities has atrophied the political fervour which springs from altruistic idealism." One is a Mohammedan, Sir Syed Ahmad Khan, whose wise caution is stigmatized as reactionary. Offensive references of this nature pervade the book and reveal its true purpose. Among the other persons dealt with are Messrs. Gokhale, Tilak, Gandhi, and Lajpat Rai. Such are the builders of the Indian nation that now is or is about to be! Of the long succession of brilliant men who laid broad and deep the true foundations of India's future nationhood, this volume makes practically no mention. Some of the sketches are of biographical interest, but the majority are fragmentary. To a reviewer who has had personal acquaintance with a number of these "nation builders," the book as a whole is a travesty. European admirers of Rabindranath Tagore, the subject of the leading sketch will do well to note that distinguished Nationalist's candid confession of the incompatibility of the caste system and national unification.

"The Edina Junior Histories."—Part I: *The Age of Settlement*, B.C. 55–A.D. 1154. Part II: *The Age of Chivalry*, A.D. 1154–1485. Part III: *The Age of Discovery*, A.D. 1485–1603. By A. L. WESTLAKE and T. FRANKLIN. (1s. 4d. each net. Johnston.)

These little books represent a marked advance in historical primers for elementary schools. They are well printed on good paper, and they are illustrated by a series of exceptionally clear and educative sketch maps. Their distinctive features are, first, an abandonment of the division of English history into reigns, and the adoption of a classification according to great movements; secondly, a concentration of attention upon a few important lines of development and a consequent omission of isolated incidents; thirdly, a careful co-ordination of English history with the history of Europe generally. Teachers who use these sketches as the basis of their instruction will find in them valuable guidance and much suggestion.

The State: Elements of Historical and Practical Politics. By WOODROW WILSON. New Edition, revised by EDWARD ELLIOTT. (10s. 6d. net. Heath.)

Exactly thirty years ago Dr. Woodrow Wilson, at that time Professor of History in the Wesleyan University, Connecticut, published the first edition of this work on "The State." By giving in a convenient form a summary of the constitutions of the principal governments, ancient and modern, the book supplied a real want long felt both by students of institutions and by practical politicians. In particular, it superseded for existing States the ponderous "Handbuch des Oeffentlichen Rechts" of Heinrich Marquardsen, which had hitherto been the main general source of information. Although since 1889 several revised editions of the original sketch have been issued, the revolutionary changes in the world effected during the past ten years have necessitated the entire recasting of large sections of the work. It emerges from the hands of Dr. Elliott (Professor of Politics in California University) almost a new book. The long chapters on Ancient Greece and Rome have been omitted. Wholly new chapters on Modern Serbia, Rumania, Bulgaria, Greece, Russia, Turkey, and Japan have been added. In one respect the old edition was better than the new. It contained an analytical table of contents (27 pages) and an index (18 pages). The new edition contains neither.

A Child's Book of English Portraits. (5s. net. Published by Philip Lee Warner for The Medici Society.)

This charming volume contains a printer's dozen of authentic English portraits, beginning with Beauneveu's Richard II and ending with Watts's Lord Roberts. Four only are the likenesses of monarchs; the remaining nine are of great representative men, such as Raleigh, Milton, Pitt, and Nelson. The pictures are reproduced in colours, and the mere fact that they are issued by the Medici Society is a guarantee of their superb excellence. Each portrait is accompanied by a short sketch of the person depicted, and a brief description of the work of art itself. It is a drawback that the portraits cannot be detached from the printed page; for

the ideal way to use them would be to put them grouped into a frame on the schoolroom wall, and to employ the letterpress as a guide book to them.

MATHEMATICS.

The Algebraic Cube. (12s. 6d. Barnes & Morris.)

The algebraic cube is a model designed to illustrate the formula $(a+b)^3 = a^3 + 3a^2b + 3ab^2 + b^3$. It consists of a wooden cube of edge $a+b$, which is divided by three mutually perpendicular planes whose volumes represent the terms on the right-hand side of the formula. The cubes whose edges are a and b are coloured blue and black respectively, the three pieces whose edges are a , a , b are yellow, and those whose edges are a , b , b are red. In this model the actual values of a and b are 6.7 cm., 3.3 cm., and the whole fits exactly into a cubical tin box of edge 10 cm. The model should be useful in showing beginners how the different types of terms in the binomial expansion arise, and in demonstrating the rule for the extraction of cube root.

A First Course in the Calculus. Part I. By W. P. MILNE and E. J. B. WESTCOTT. (9s. 6d. Bell.)

The aim of the authors has been to provide a sound training in the machinery of the calculus, basing their treatment of the subject upon geometrical intuition. They maintain, and we think justly, that a discussion of the fundamental principles based upon the modern concept of numbers and their continuation is quite beyond the comprehension of the average pupil, but that graphical treatment and practical application make the subject easy and attractive to the beginner. The sub-title indicates a limitation of the functions treated to "powers of x ," other functions being reserved for Part II; but, even so, there is ample scope to illustrate the value of the calculus as an instrument of research in geometry and various branches of applied mathematics. The examples are chiefly numerical, and usually relate to some practical problem, thus giving a sense of reality which is absent when the mere jugglery with letter's is involved. The teaching of the calculus to young schoolboys is still in an experimental stage, but we think that if it is to be pursued with success it must be conducted somewhat on the lines indicated in this book.

Introduction to Mathematical Philosophy. By BERTRAND RUSSELL. (10s. 6d. net. Allen & Unwin.)

This book, dealing with a subject which the author has made peculiarly his own, is intended to provide an account of the main results of mathematical logic in a form which for comprehension requires neither a knowledge of mathematics nor an aptitude for mathematical symbolism. Mathematicians are now fairly familiar with the investigations which a small band of thinkers have pursued into the nature of the fundamental concepts of their science; nevertheless, they will find some of the lively illustrations here given very helpful in clarifying their ideas regarding these matters. The earlier chapters deal with number, order, rational, real and complex numbers, limits and continuity—subjects with respect to which opinion has now reached a stable condition. The later chapters discuss more debatable topics, many of which lie on the frontiers of knowledge, and relate to the axiom of infinity, the theory of deduction, and the doctrine of classes. To render these discussions intelligible to a reader who has no special mathematical or logical knowledge is by no means easy, but the author has gone very far to achieve it.

SCIENCE.

"The Cambridge Nature Study Series."—*The Study of the Weather.* By E. H. CHAPMAN. (3s. 6d. net. Cambridge University Press.)

For school use this is, without doubt, the best book yet published on the subject. The writer carefully describes the phenomena that should be observed, and he indicates how records of the observations should be kept. The chapter on clouds deserves particular mention, if only for the series of striking photographs of different types of clouds. Weather charts issued by the Meteorological Office are explained in detail, special attention being given to the study of cyclones and anti-cyclones. Throughout the book questions and practical exercises are set in order to test the progress of the pupils. A useful list of books on meteorology is also given in the appendix.

The Boy's Own Book of Great Inventions. By FLOYD L. DARROW. (12s. 6d. net. New York: Macmillan.)

There is, we are glad to know, an increasing tendency to broaden and humanize school courses of science, and as University Examining Bodies extend the plan of permitting school authorities to submit their own syllabuses of instruction for examination purposes, this broadening of the school outlook will become more pronounced. The teacher of science in the United States is less dominated by syllabuses imposed by external authorities than his British

London: Mr. WILLIAM RICE, 3 Ludgate Broadway, E.C.4.

colleague, and American textbooks of science for school use are much wider in scope and frequently more interesting in character than those published in this country. The present volume should be examined by all teachers of science in our secondary schools. It deals in a graphic and interesting manner with some of the great epoch-making inventions in physics and chemistry which have done so much to revolutionize human life in recent years. The senior pupils of science in our schools would be fascinated by Mr. Darrow's chapters, and, if the volume is too expensive to be placed in the hands of all such students, several copies of it might well be added to the school library. Teachers will find it invaluable in the preparation of more general lectures on scientific subjects which it is at present difficult to include in the regular curriculum. It would be difficult to find a more suitable prize for pupils studying science.

Senior Practical Chemistry. By H. W. BAUSOR.
(3s. 6d. University Tutorial Press.)

Mr. Bausor's little book is written to meet the requirements of the Senior Cambridge Local Examination in Practical Chemistry. It is divided into three sections, which deal respectively with selected preparations, simple quantitative work, and qualitative analysis. There is a chapter on the action of heat on a variety of substances, designed to familiarize the pupil with a very common type of examination question. The treatment accorded to the syllabus is very thorough—so much so that nothing whatever is left for the student to do except to carry out the precise and detailed instructions provided for him. Whilst such a method is doubtless admirably fitted for securing a good pass list, yet it nullifies almost entirely the good effects of a course in chemistry.

The Flower and the Bee: Plant Life and Pollination.

By J. H. LOVELL. (10s. 6d. net. Constable.)

Probably nothing in biology has intrigued the popular imagination more than the relations between flowers and insects. Since Sprengel first pointed out the significance of the bright hues and the nectar of flowers, the observations of Darwin, H. Müller, and a host of other workers on this subject have resulted in a store of knowledge interesting to gardeners, fruit-growers, and bee-keepers, no less than to botanists and entomologists. For all such, this book will serve as a convenient and readable summary of the main facts. The title is somewhat unfortunate, since the book very properly deals with the part played not only by bees but also by moths, butterflies, and two-winged flies in the pollination of flowers. The author is a first-hand observer, who has for many years spent much time in watching the behaviour of insects visiting the wild flowers of the northern States of America. He describes these things clearly and simply, and without the garrulity with which so many would-be popularizers of biology eke out their material. He has, moreover, illustrated his book by excellent photographs, which are excellently reproduced. Referring to what he calls certain new and bizarre suppositions which have been advanced, Mr. Lovell states that his experience has convinced him of the efficacy of natural selection in the evolution of flowers, of the advantages of cross fertilization, and of the inheritance of acquired characters. Some particulars of the evidence on which his last-named belief is founded would have been interesting.

Sat., 11 a.m. to 1 p.m.

Tel.: Vic. 2483. Teleg.: Communitas Sowest London.

NATIONAL SERVICE RECORD

A record is being prepared of services rendered
in connexion with the war by Members of the
COLLEGE OF PRECEPTORS and holders of the
College Diplomas. For this purpose the Secre-
tary will be glad to receive information with regard
to such services, whether rendered in the fighting
forces, or in the auxiliary forces—e.g., Red Cross
organizations, Special Police, Women's war
organizations, or in other ways. He will also be
glad to receive from Members and Diploma holders
any proposals which their experience may have
suggested for improvements in methods or organiza-
tion, especially in relation to education and its use
as a training for national service.

PRELIMINARY EXAMINATIONS

FOR

MEDICAL, DENTAL,

AND

PHARMACEUTICAL STUDENTS

The COLLEGE OF PRECEPTORS holds Pre-
liminary Examinations in March, June, September,
and December. All the Examinations are held in
London, Birmingham, Blackburn, Bristol, Cardiff,

UNIVERSITY OF LONDON

KEDDEY FLETCHER-WARR STUDENTSHIPS.

THE Senate invite APPLICATIONS for the KEDDEY FLETCHER-WARR STUDENTSHIPS for the promotion of post-graduate research. The Studentships, which are tenable for three years and are of the annual value of not less than £200, are open equally to men and women of European descent who are graduates of some British University or have passed an examination necessary to qualify for a degree of some British University, but, other things being equal, preference will be given to a graduate of the University of London. Applications must be received not later than 31st December, 1919.—Further details can be obtained on application to the Academic Registrar, University of London, South Kensington, S.W.7.

SCHOLASTIC APPOINTMENTS

University men and women seeking scholastic appointments should apply to

Truman & Knightley —SCHOLASTIC AGENTS—LTD—

who introduce ASSISTANT MASTERS AND MISTRESSES to the majority of the leading Public and Private Schools at home and abroad.

Through this Agency, well educated gentlewomen with Higher Local and other good Certificates, interested in children and in teaching, can find congenial work in good high-class Private Schools, where the hours are not excessive, conditions are pleasant, and the holidays long. Salaries range from £60 to £120 or more per annum, with board and residence, according to age, qualifications, and experience. There are also many vacancies for Student Teachers, Junior Mistresses, and House Governesses or Duty Mistresses at salaries of from £30 to £60 per annum with board and residence.

There is a separate department for
LADY MATRONS and HOUSEKEEPERS
for schools.

No charge for registration.

::

Moderate commission.

SCHOOL TRANSFER DEPARTMENT.

Ladies and Gentlemen seeking Partnerships in, or to take over schools of their own, should communicate personally with Mr. TRUMAN, who undertakes all negotiations connected with the Transfer of Schools, and who is in a position to offer assistance and sound advice to purchasers, to whom no charge is made.

TEXT-BOOKS FOR JUNIOR AND SENIOR FORMS

PUBLISHED AT THE

University Tutorial Press.

MATHEMATICS AND MECHANICS.

Algebra, Junior. By A. G. CRACKNELL, M.A., B.Sc., and AUGUSTUS BARRACLOUGH, M.A. **3s. 6d.** With Answers, **4s.**
"Maintains the high standard of excellence we are accustomed to expect from so well known a source. The treatment of the graphic portion is particularly good."—*Journal of the Assistant Masters' Association.*

Algebra, School. By A. G. CRACKNELL, M.A., B.Sc. With or without Answers. **7s.**
"The author has brought the work into closer touch with intelligible calculations, and, at the same time, gives a clear account of the elements of algebraic theory."—*Schoolmaster.*

Algebra, School (Matriculation Edition). By A. G. CRACKNELL, M.A., B.Sc. With or without Answers. **5s. 6d.**
"As a school text-book this volume has much to recommend it, the examples and test-papers being carefully chosen."—*Mathematical Gazette.*

Arithmetic, The Tutorial. By W. P. WORKMAN, M.A., B.Sc., Head Master of Kingswood School, Bath. *Third Edition.* With or without Answers. **5s. 6d.**
"Destined to supersede all other secondary treatises on the subject."—*Westminster Review.*

Arithmetic, The Junior. By R. H. CHOPPE, B.A. With or without Answers. *Third Edition.* **3s. 6d.**
"No better arithmetic for school work has come into our hands."—*Educational News.*

Arithmetic, The School (Senior Local Edition). By W. P. WORKMAN, M.A., B.Sc. This edition of the *School Arithmetic* covers the Senior Locals Syllabus, and is amplified by a large selection of examples arranged in Graduated Examination Papers. **4s.**
"The book is of a very high order of merit, and provides a thorough course in Arithmetic."—*School World.*

Arithmetic, Rural. By A. G. RUSTON, B.A., B.Sc. **4s. 6d.**
"We believe the book will be found just what is required in schools of agriculture."—*Secondary Education.*

Book-keeping, Practical Lessons in. By T. C. JACKSON, B.A., LL.B. *Fourth Edition.* **4s. 6d.**
"A well-arranged and well-explained treatise."—*Educational Times.*

Geometry, Junior. By A. G. CRACKNELL, M.A., B.Sc. **3s. 6d.**
"A simple treatment of the elements of Geometry. A feature of the book is the number of questions which require a numerical answer, incorrect and careless work being thereby easily checked."—*Schoolmaster.*

Geometry, The School. By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. (New and enlarged edition.) **5s.**
"Combines the theoretical and practical in a most interesting manner, and shows on every page the skill and care with which the material has been put together."—*School World.*

School Geometry (Matriculation Edition). By W. P. WORKMAN, M.A., B.Sc., and A. G. CRACKNELL, M.A., B.Sc. **4s. 6d.**
Covers fully the syllabus for London University Matriculation.

Graphs, Matriculation. By C. H. FRENCH, M.A., and GEORGE OSBORN, M.A. **1s. 6d.**
"The explanations are remarkably clear."—*Secondary Education.*

Hydrostatics, Matriculation. By Dr. WM. BRIGGS and Professor G. H. BRYAN. *Second Edition.* **2s. 9d.**
"An excellent text-book."—*The Journal of Education.*

Mathematics for Technical Students, A First Course in. By P. J. HALER, B.Sc., A.M.I.Mech.E., A.I.E.E., and A. H. STUART, B.Sc., F.R.A.S. **2s.**
"The authors have succeeded in creating a 'workshop atmosphere' around this elementary course."—*Nature.*

Mechanics, Junior. By F. ROSENBERG, M.A., B.Sc. **3s. 6d.**

Mechanics, Matriculation. By Dr. WM. BRIGGS and Professor G. H. BRYAN. *Third Edition.* **4s. 6d.**
"A practical book for this subject. It will be found exceedingly useful."—*Educational News.*
"Affords beginners a thorough grounding in Dynamics and Statics."—*Knowledge.*

Trigonometry, Junior. By WM. BRIGGS, LL.D., M.A., B.Sc., F.R.A.S., and G. H. BRYAN, Sc.D., F.R.S. **3s. 6d.**
"The examples given are numerous in each chapter, the diagrams and the arrangement practical."—*Secondary Education.*

BOTANY, CHEMISTRY, PHYSICS, &c.

Botany, Junior. By FRANCIS CAVERS, D.Sc. **3s. 6d.**
"Dr. Cavers has achieved a useful little book."—*Journal of Botany.*
"Combines observational and experimental work with text-book instruction in a judicious fashion."—*Preparatory Schools Review.*

Botany, Senior. By FRANCIS CAVERS, D.Sc. **5s. 6d.**
"Admirably designed to portray the plant as a living entity, to indicate how structure is subservient to function, and to show what conditions and purpose underlie the manifold variations which plants assume."—*Nature.*

Chemistry, Junior. By R. H. ADIE, M.A., B.Sc. *Second Edition.* **3s. 6d.**
"A useful and practical course, constructed on thoroughly scientific principles."—*Oxford Magazine.*

Chemistry, Senior. By G. H. BAILEY, D.Sc., Ph.D., and H. W. BAUSOR, M.A. *Second Edition.* **5s. 6d.**
"The ground is well covered on experimental lines. There are questions to every chapter and a section on chemical calculations."—*Guardian.*

Chemistry, Senior Practical. By H. W. BAUSOR, M.A. **3s. 6d.** Including preparations, experiments on action of heat, quantitative and qualitative analysis.

Chemical Calculations. By H. W. BAUSOR, M.A. **2s. 9d.**
ADVANCED COURSE. **1s. 6d.**
"The calculations which are inseparable from Chemistry from its very beginnings are dealt with concisely, yet at sufficient length to make them clear to a young student."—*Knowledge.*

Heat, Junior. By JOHN SATTERLY, D.Sc., M.A. **2s. 9d.**
"A remarkably clear exposition of the main principles of the science, such as is required by elementary students."—*Secondary School Journal.*

Heat, Senior. By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. **4s.**
"The information is accurate and up to date."—*The Journal of Education.*

Hygiene, First Stage. By R. A. LYSTER, M.D., B.Ch., B.Sc. *Sixth Edition, Revised and Enlarged.* **3s. 6d.**
"A continuous and well-developed course of instruction in Hygiene. The facts are always reliable, the illustrations serviceable."—*Schoolmaster.*

Magnetism and Electricity, Junior. By R. H. JUDE, D.Sc., M.A., and JOHN SATTERLY, D.Sc., M.A. **3s. 6d.**
"This little book makes a special point of fundamental principles, and is especially adapted to the needs of pupils making a start in the subject."—*Educational Times.*

Magnetism and Electricity, The School. By R. H. JUDE, D.Sc., M.A. **4s. 6d.**
"From first to last there is an originality of treatment which makes it interesting reading."—*Nature.*

Mechanics and Physics, (Mechanics, Hydrostatics, and Heat), An Introductory Course of. By W. M. HOOTON, M.A., M.Sc., F.I.C., and ALFRED MATHIAS. **2s.**
"An excellent introduction to the fundamental principles of Mechanics, Hydrostatics, and Heat."—*Educational News.*

Science, Junior Experimental (Physics and Chemistry). By W. M. HOOTON, M.A., M.Sc., F.I.C., Chemistry Master at Repton School. *Second Edition.* **3s. 6d.**
"The explanations are clear, and we can recommend the work heartily."—*Secondary Education.*

Sound and Light, Senior. By R. W. STEWART, D.Sc., and JOHN SATTERLY, D.Sc., M.A. **5s.**
"The treatment is lucid and concise, and thoroughly in accordance with the most recent methods of teaching elementary Physics."—*Nature.*

Sound and Light, Junior. By JOHN SATTERLY, D.Sc., M.A. **3s. 6d.**

OCCASIONAL NOTES.

Scholarships and Free Places. IT is good news that the Board of Education have set up a Departmental Committee to inquire into the working arrangements for the award of scholarships in secondary schools, and the provision of free places in these schools. When first the McKenna regulations were promulgated, there was no lack of Cassandras.

Some predicted financial ruin for those schools which had not the rates to fall back on. Others predicted a lowering of the intellectual standard. Others, again, predicted social cataclysm, and warned us against the dangers of an "intellectual proletariat." None of these things has happened, but it is time to take stock of the situation. Some seven years ago the annual report of the Board contained several interesting epitomes of opinion on the working of the free-place system up to that time. But results were not quite as uniformly favourable as those opinions represented. They vary considerably as between town and country, small town and large town, north and south. Further, it is clear that the present system is not adequate to the need. The promising girl or boy in a sparsely populated rural area still lacks a chance. It is clear that for this case a boarding school is the only effective chance, and this means a maintenance scholarship as well as free tuition.

Boarding Schools. THIS opens up the much bigger question of the boarding schools as a whole, and the possibility of finding for them some definite place in the national system. At present, the higher schools of this type stand apart, fed by special preparatory schools (for the most part private establishments), and differentiated in their curriculum from the other secondary schools of the country. This differentiation of type necessitated special treatment of their case in the Reports of the Prime Minister's two Committees on Science and Modern Studies. They

are, further, divorced socially from the general workaday life of the community. The great question is: Can these divisions be bridged over, and the public schools, with the other boarding schools which conform to their type, be brought into organic relation with the general system of the country based on the existing elementary schools? The contribution they make at present is a contribution of quality, and a conspicuous success in the organization and spirit of corporate life. It would be a great thing if they too, like the grammar schools, could be democratized. But it is one of the most difficult to solve of all problems in our educational world.

Education and Economy. OUR readers will have noticed the suggestions made in the Press and in the House of Commons that, in view of the necessity for every form of national economy, the Education Act of 1918, among other Acts, should be repealed. We are glad to observe that this bright idea has been dealt with faithfully by the Prime Minister in the Commons, and by the President of the Board of Education in an address to the London Teachers' Association. Some of us may have regretted that the Prime Minister, with humorous reference to the case of Scotland, should have placed the emphasis upon the material gain that is likely to accrue from a more thorough system of education. But, then, he was answering a specific argument, and the rest of his speech illustrated the truth that, under wise administration, material and spiritual gains will go hand in hand. Mr. Fisher declared that it would be fatal to the social development of the country if, in order to reduce national expenditure, we scrapped our educational and social reform schemes. It will be well to bear in mind Mr. Fisher's warning that education has never been a popular subject in this country, for that is a reflection, not only upon public opinion, but also upon the sort of education that has been offered. Let the Act be wisely administered, and we are convinced that the better mind of all classes will come round to the view expressed by Mr. Fisher on a memorable occasion, that the question is not whether we can afford to have better education, but whether we can afford not to have it.

The Rush for Education. THE pressman, on the way to his work in Fleet Street, has noticed that the erstwhile Eagle Hut, in the Strand, has become a classroom for the students of King's College, and, having made a paragraph, he has sent it round the Press. But it is not only King's College that cannot find room for its students within its walls; the Imperial College, at South Kensington, has refused more students than it has admitted, simply for lack of space; and the tale is the same of every college and polytechnic throughout London, and, we believe, throughout the provinces, too. After all, this is not surprising; students are desirous of returning to the work they left at the bidding of the Conscription Act; whereas, the normal number of schoolboys reaching University age is no fewer than in previous years. Thus the colleges find it difficult to make room for both the old and the new students. The same cause makes the private tutor busier than he has ever been before, especially as many establishments were closed during the war for lack of pupils, and have not reopened. But what is more surprising is that preparatory and public schools are in the same state

of congestion. The number of boys cannot be greater this year than during any year of the last decade, for the birth-rate is falling. If certain people have enriched themselves by the war, and desire a better education for their sons, others must have become poorer and must be content with cheaper schools. So one would think that a rough balance would be struck. But we hear of parents unable to secure a place for their sons in the better preparatory schools—where fees are higher than ever—not next year only, but even in 1921 or 1922. The same tale is told of the public schools, which have a difficulty in reserving places for the sons of their Old Boys and of those who have fallen in the war. The explanation of this crush is no doubt simple, but for the moment it escapes us.

Physical Education. IN a letter to a recent number of the *Times*, a body of distinguished members of the medical profession direct attention to the need for more adequate physical education of our population. To deal with the actual ailments of the individual, while neglecting the means of securing ordinary fitness which might prevent the onset of many of the conditions, is clearly not enough. A complete system of physical education—æsthetic, recreational, and remedial—is a necessary part of any organization for national health. The signatories of the letter suggest the establishment of a new department of the Ministry of Health, to act in co-operation with local voluntary agencies. We cannot but wonder if they have overlooked the fact that all their postulates are met in the Education Act of 1918, which empowers competent Local Authorities to provide any necessary means for physical and social training for persons of any age who attend any educational institution either by day or in the evening. The phrasing of the Act is so drawn that any institution for physical education would come within its range. The funds are therefore available. An adequate advisory staff exists, moreover, in the special department of the Board of Education, which, already strong, has, we understand, been strengthened specially to meet the new conditions, and in the Inspectorate of the Local Education Authorities. Many voluntary associations which already exist are helped to some extent by Local Authorities, and this help could be extended. All that the writers to our contemporary demand can be got by asking the Board of Education to see that, in submitting schemes under the Act of 1918, Local Authorities insert the necessary provision for grounds, gymnasia, and personnel. Physical education is so integral a part of the curriculum that grave difficulties would arise if it were dealt with by another Ministry, and at the best a system of overlapping would arise which it is the aim of the Ministry of Health to avoid. While the proposal to improve physical education should meet with universal support, the central authority should be that empowered to deal with education in general, which already possesses the necessary statutory powers.

The Oxford Training Delegation. IN order to meet the new situation created by the Act of 1918, Oxford University is reorganizing its training work. The old delegacies for the separate training of elementary- and of secondary-school teachers have been abolished, and a new department, with a new officer at its head, the "Director of Training," who is responsible for the whole of the work, has been set up.

One of the main purposes of the new department will be to train teachers for the largely increased number of children who, when the new Act is in full working, will be receiving secondary education in one type of school or another, in the higher standards of elementary schools, in central schools, in county or municipal secondary schools, and in continuation schools. Work of this kind calls for a new type of training, and for men and women who are not merely efficient class teachers, but have a clear grasp of ends as well as means, and have studied the social conditions of the children whom they are to educate. The University is reorganizing its work to meet these needs; at the same time the work of training teachers for the more advanced secondary schools and for the "public schools" will be maintained and developed. It is hoped to utilize to a greater extent the abundant teaching resources which the University affords, and to bring into line institutions which hitherto have had little connexion with the work; above all, to win a larger measure of co-operation from the secondary schools both in and out of Oxford, especially from the great public schools. Women as well as men are admitted to all courses. It is anticipated that the grants which the Board of Education now offers, throughout the whole of their University course, to students who undertake to teach in "approved" schools, will attract many students for whom a University career has hitherto been financially impossible.

Economic History in School Examinations. THE Delegacy which controls the Oxford Local Examinations has been making a drastic revision of its syllabuses. Of late years it has tried a number of interesting experiments, with the view of encouraging the teaching of new and important subjects in schools. Some of these experiments have justified themselves, and the new subjects have established their position. European history and colonial history, for example, have come to stay; others, however, have failed to secure a foothold, and, consequently, "unless the number of candidates materially increases," they will be discontinued after 1921 or 1922. Among these threatened subjects we much regret to see Economic History. It is to disappear from the Junior Syllabus in 1921 and from the Senior in 1922. Its elimination from the former may perhaps be contemplated with equanimity; it is probably well that young boys in secondary schools should concentrate their energies upon gaining a mastery of the outlines of Political History; but it is in the highest degree important that, in senior classes in secondary schools, in continuation schools, in adult reading circles, and in all places where mature minds are trained, Economic History should be seriously and scientifically studied.

The Teaching of Economic History. THE problems of the present day are so largely economic, their roots lie so deep in the historic past, there is so much danger lest they should be mis-handled by fanatics ignorant of their antecedents, that there is urgent need that the study of the subject should be widely extended. A few years ago it might have been objected that there was a scarcity of good textbooks, but that objection can no longer be urged. The manuals of Cunningham, Meredith, Townsend Warner, Lipson, Cressy, Bradshaw, and others supply in ample variety all that can be desired. There

may still be a deficiency of teachers, but, if that is so, it is discreditable to the profession. Improved status and growing emoluments make an imperative demand for an increasing efficiency. The subject of Economic History has in too many places got into bad hands. It has got into the hands of political or anti-political agitators, who exploit it for sectional and sinister ends. The best corrective to the dangerous misuse of it is that it should be soundly taught in schools and colleges. Hence we sincerely hope that the warning issued by the Delegacy may be sufficient to bring in recruits, and so to obviate the necessity for removing the subject from the examination syllabus.

THE Treasury have recently defined the kinds of teaching service which will constitute "qualifying" service under the Superannuation Act. They have

Qualifying Service.

attempted to solve an obvious difficulty, so far as "independent" secondary schools are concerned, by accepting service in schools whose head masters or head mistresses are members of their respective associations. As these schools include those represented on the Conference of Catholic Colleges or Schools and the Association of Preparatory Schools, together with schools recognized for the purposes of Column B of the old register, and by the present Teachers Registration Council, this list is fairly comprehensive and satisfactory—though it is certainly quaint that the value of a teacher's service may depend upon whether his Head is a member of the Association to which he ought to belong. These regulations refer to time prior to April 1 last, and mainly affect secondary teachers. The clauses which concern primary teachers are also fairly comprehensive, and will probably be considered satisfactory as a whole. Service in our Colonies, Dependencies, and in India will be "qualifying" if in schools maintained, aided, or inspected by the Government, a quite reasonable proviso. The clause which formally states that service in schools in receipt of grants from the Government in Scotland and Ireland may count as "qualifying" only will remind teachers of one of the more glaring injustices under the Act. State-aid is the main qualification for pension purposes; yet service in schools in Scotland and Ireland which receive Government grant is not pensionable, even though the teachers have been teaching in England, often for years. It must be remembered that all these regulations refer to teaching service only. Much non-teaching service will, no doubt, also count as "qualifying," but no decision as to this has yet been reached.

SCHOOL textbooks of any period constitute a faithful record of the existing school conditions. Lilly's "Grammar" portrays the sixteenth century Grammar School. Cocker's "Arithmetic" gives a glimpse of the School of the seventeenth century. The textbooks in use in elementary schools twenty years ago bear testimony to the pernicious influence of the early Codes. No textbook can be pronounced absolutely good. It cannot be so judged without reference to the personal equation of the teacher. Any help that is given in the selection of textbooks, therefore, must leave considerable margin for choice. On the other hand, many textbooks can, without scruple or hesitation, be pronounced absolutely bad. The way to improvement is by way of the elimination of the unfit rather than by way of any attempt to set up

an arbitrary and uniform standard. In choosing textbooks teachers are largely at the mercy of the persuasive influence of publishers, exercised through catalogues or book agents. Some textbooks, on the strength of a traditional reputation, contrive to reappear in successive editions long after they have outlived their usefulness. In other cases a natural conservatism makes a teacher unwilling to upset established routine and swell the school estimates by a change of textbook. Education Authorities and Governing Bodies are not guiltless here. There is no economy so extravagant as the retention of a textbook which is out of date although it may not be worn out.

THE Kent Education Committee are attacking this problem of selecting suitable textbooks with vigour and determination. After full consultation with teachers

Choice of Textbooks.

and other experts, an Official Requisition Schedule has been prepared and will shortly be issued, covering not only books, but stationery, material, and other apparatus for school use. The schedule, which will, of course, be subject to periodic revision, is catholic in scope and allows a wide variety of choice. There is an *index expurgatorius*, but this is not for publication. On the other hand, the inclusion of any book or piece of apparatus is, or should be, a certain guarantee of its usefulness for teaching purposes. The schedule should be of great assistance to teachers, particularly to those in small and remote country schools. A room at the Central Office will be supplied with samples of the textbooks and other material included in the schedule. There will be a large reading room comfortably fitted up, and an assistant in charge who will be able to answer inquiries and to guide teachers on their voyage of discovery. The Committee have agreed to pay the travelling expenses which any head teacher incurs in paying an annual visit to the educational Mecca at Maidstone. The Kent plan seems admirably adapted to meet the difficulty to which attention has been called recently, with only too much reason, by the Minister of Education.

FREE secondary education in Bradford came in the end like a bolt from the blue. Before the War the question had been discussed and abandoned on the

Free Secondary Education in Bradford.

ground that the fees were so low, and scholarships—about 75 per cent.—so numerous, that for all practical purposes free secondary education existed in Bradford. This year it was reserved, however, for an enthusiastic "Young Liberal" chairman to make the ideal a reality. The decision was arrived at last June, and came into operation in September. How was the suddenly increased demand upon an already fully taxed accommodation of 3,164 to be dealt with? The Director of Education held consultations with the head teachers, and the possibilities of the eight municipal secondary schools were closely overhauled. Army huts bought for other purposes were diverted to this new need, and the Works Department at once got to work. Classroom accommodation was ultimately increased to 3,800. The usual annual admission to these schools of 685 was increased to 1,283. The number of scholarships awarded was increased from 823 in 1918 to 1,359. Further laboratory accommodation was extemporized, and some thirty-one additional teachers appointed. The staffing difficulty was less than it might have been, inasmuch as several

teachers were available who had been doing duty in the absence of many of the regular staff with the Army. Even after all this, there were still many unsatisfied claimants for admission to the secondary schools, and for these central classes will be provided: one in a newly purchased denominational secondary school, one in an emptied elementary school, and two others in selected elementary schools, where sufficient accommodation exists. A still larger extension of accommodation must be accomplished by September 1920.

Salaries in Reformatory and Industrial Schools.

THE Committee appointed by the Home Office to report upon the salaries and conditions of service in these schools state that they regard them as being primarily educational establishments. The revelations contained in their report show clearly that, whatever other purpose they may have served in the past, educational they certainly were *not*.

In the first place, the staffs themselves have often been chosen chiefly "with a view to securing a maximum of production": yet even the making of boots, uniforms, and underclothing does not appear to have made the children into skilled workers—indeed, the workshop classes have been far too large to allow of more than a pretence of education. In addition to some thirty hours' teaching per week, the staffs have been required to put in often more than thirty more hours of more or less "exacting duties." Up to the age of fourteen the children have been only "half-timers," and even this teaching has been given before breakfast and after supper; above that age schoolroom instruction has usually been reduced to about three hours per week! Finally, the salaries paid have been so poor that the more capable instructors have refused to remain in institutions where, moreover, the residential accommodation was disgracefully inadequate, and from which they were in many cases subject to summary dismissal without right of appeal. The recommendations of the Committee are upon sound lines, and, briefly, amount to the placing of the teaching staffs upon a similar footing as regards salary and conditions of service to those enjoyed by elementary-school teachers in ordinary schools under Local Education Authorities. Mr. Shortt has stated in the House of Commons that he is anxious to give effect to the Committee's recommendations as early as possible. It is impossible to discuss here the position which such schools should occupy in our social system; but that their continuance on present lines is little less than a scandal the report makes abundantly clear.

Lancashire Continuation Schools.

THE County of Lancashire has decided to prepare an outline survey of the position regarding day continuation schools in autonomous areas, taking into consideration the number of students to be dealt with, the chief local employments, the accommodation required, and the possibility of securing teachers. It is also proposed to invite the suggestions of local Committees as to suitable localities in which there appears to be a prospect of establishing voluntary day continuation schools prior to the "appointed day." Schools of an experimental character have already been established in certain parts of the county, and the Lancashire Committee is well advised in concluding that it is only by experiment on a variety of lines that sufficient knowledge can be gained to inaugurate an efficient system for the

county as soon as the "appointed day" is fixed by the Board of Education. At the present moment it seems as though the dawn of the "appointed day" will be indefinitely deferred.

Lancashire Proposals.

THE Clerk to the Lancashire County Council has anticipated legislation, and, as the result of a conference between the members of the Agricultural Executive Committee and those chiefly concerned in agricultural education, appears to have evolved order from what might have been chaos. It has been agreed to appoint an executive officer to be the head expert official of the new County Agricultural Committee, and, in addition, a Secretary for Agricultural Education, who, under the Director of Education, will be responsible for the work of the Agricultural Sub-Committee of the county. Lancashire, therefore, appears to have decided that the educational interests of agriculture are not to be severed from the general educational problem.

Medical Inspection.

THERE has always been a danger that the School Medical Service might be concerned chiefly with routine inspection and the compilation of statistics. If it is to be really effective, to be concerned with the physical care and development of children as intimately as teachers are concerned with their mental progress, expenditure on the service must not be stinted. The Stafford Education Committee have adopted a scheme which should prove of considerable value. It aims at combining the work of school medical inspection and treatment with Health Visiting and Infant Welfare work. The county elementary area has been provisionally divided into fifteen districts, each containing a population of approximately five thousand school children. To each of these fifteen districts it is proposed to allot an assistant medical inspector, and when she becomes familiar with her duties it is expected that she will find time to undertake the charge of welfare centres as these materialize. It is a step in the right direction.

Agriculture.

ONE of the many administrative by-products of the war is the Agricultural Executive Committee, the descendant of the War Agricultural Executive Committee, originally constituted by the County Council, and subsequently invested with unlimited powers to "kindle and restrain" those who practise agriculture. Under present conditions, Agricultural Executive Committees derive their resources from, and are responsible only to, the Board of Agriculture and Fisheries. Their functions, except in so far as they may be required to demobilize horses and tractors and adjust claims for compensation, are not clearly defined, and it would be in the interests of national economy if they ceased to exist. County Councils have statutory Committees for Allotments and Small Holdings, Executive Committees dealing with diseases of animals and other matters affecting agriculture, and also the recently constituted Agricultural Education Committees. Agriculture is an industry of primary importance, but its adherents may well take alarm if its fortunes are to be regulated by the activities of so many committees. For this reason, no doubt, the Land Settlement (Facilities) Bill proposed the establishment of County Agricultural Committees, and a similar co-ordinating provision is made in the Board of Agri-

culture and Fisheries Bill just presented to Parliament. Sir A. Griffith-Boscawen said that the Government "aimed at sweeping up all administration and work connected with agriculture." It is not clear whether agricultural education is to be included in the process.

THE REPORT OF THE CALCUTTA UNIVERSITY COMMISSION.

THERE is evidence, internal evidence on almost every page, that the Calcutta University Commission's report was inspired and written on the heights: on the physical heights over which Kanchenjunga and his brother giants brood probably, certainly on the heights of educational thought. Reports on education are not usually regarded as recreative reading, but the student of education who opens any one of the five substantial volumes which have now come to England from India will find himself amply rewarded. He will be surprised and delighted by the wealth of sound doctrine, expressed often in telling aphorisms, which these volumes contain. If education is a dull subject, it does not appear so when treated with the philosophic breadth of vision, the human sympathy, the just perception of the close connexion between principles and practice, and, wherever possible (and sometimes where antecedently it would have seemed not possible), the literary charm, which chapter after chapter reveals. There are great documents pertaining to the history of Indian education, admirable surveys and summaries, official and non-official. There is none great and admirable as this is: at once so ample, so comprehensive, so sympathetic, so appreciative of what has been excellent in past purposes and achievements, so convincing in its exhibition of existing shortcomings, so persuasive in its suggestion of the better that might be. "The problem before us is as inspiring as it is complex and difficult." That is the note on which the study of the problem opens. "The growing demand of the people of Bengal for educational facilities is one of the most impressive features of our age. It is altogether healthy and admirable." That is the spirit in which the task as a whole is approached. And it is a new spirit. "The flood of candidates for University training has put so heavy a strain upon the University and its colleges as to lead almost to a breakdown. And if justice is to be done to a great opportunity, and the eagerness of young Bengalis for academic training is to be made as advantageous to their country as it ought to be, it has become manifest that bold and drastic changes and improvements in the system are necessary." "Convinced that nothing short of a comprehensive reconstruction of the University system will meet the needs of the time, we shall propose . . . a new departure in secondary and higher education in Bengal. Educational reform on a bold and generous plan may save Bengal from the loss and danger which threaten a country when the training of its educated classes has got out of gear with the economic needs of the nation." This is how the Commission envisage their problem and seek a path to its solution. It may be affirmed with confidence that whatever the practical outcome of the Sadler Commission of 1917, their report makes an epoch in the history of Indian education from the attitude of mind in which their task has been approached, from the fullness of experience and knowledge which has been brought to bear upon it, from the remarkable completeness of the survey on which their conclusions are founded, and, above all, from the spirit of wise sympathy and helpfulness in which their recommendations are made.

The immediate occasion of the appointment of the Commission was the difficulty experienced in making adequate provision for "post-graduate" study in Calcutta—that is, for

the M.A. and M.Sc. courses framed as a result of the Universities Act of 1904. This difficulty by the year 1913 had become acute, owing mainly to the number of graduates seeking the qualification of the higher degree in Arts. But the causes which made it advisable in 1917 once more to have recourse to a "Commission" were wider and deeper. They all turned ultimately on that eager pressure on the colleges, the disorganizing effect of which the report recognizes, while analysing its underlying causes with sympathy. The improvements in the quality of University education which the reforms of 1904-6 sought to introduce depended for their efficacy on a careful moderation of numbers, or rather on the maintenance of a balance between students and teaching power, including in the latter suitable buildings and equipment. The pressure on the colleges outran the resources for expansion. The numbers seeking education could not be received without a relaxing of the safeguards which the reforms of 1904-6 had implied. The result was colleges with between 1,500 and 2,000 undergraduates, and over a thousand graduates in "University classes"—without adequate provision in the one case of the requisites of a collegiate society, in the other of higher study.

The subject originally proposed for inquiry was simply Calcutta University—"its condition and prospects," but in regard to this the terms of reference were very wide, and the Commission are expressly empowered "to recommend any changes of constitution, administration, and educational policy which may appear desirable." As soon as they entered upon their labours, the Commission found, like so many others who have given serious attention to the subject, that the consideration of University education in Bengal was inseparable from a consideration of the education given in the secondary schools. Accordingly their survey is extended equally to secondary education, and the report offers the great advantage of presenting this vast problem of higher education as a whole. Three of the five volumes are given to an "analysis of existing conditions" as illuminating as it is exhaustive. The other two contain a reasoned exposition of the recommendations. Chapters in both parts deal separately with the various aspects and divisions of the subject: attention is focussed on two main themes, the problem of the secondary schools and the problem of the University. For each of these the Commission put forward a bold and comprehensive scheme of reconstruction—of reconstruction so thoroughgoing as to constitute, as they explain, "a new departure."

This new departure for the University consists in the constitution of a centralized teaching University for Calcutta by drawing into closer association with the University, and with each other, the Calcutta colleges capable of reaching the academic standards required, while the colleges outside the city, too far from the centre of University life to share its common activities, though not completely severed from the University, are placed under the superintendence of a separate Board. "The University system of Bengal," say the Commission in their summary, "is in our judgment defective in almost every aspect." They see no hope of realizing a University suited to the needs of the times, while it is made up of a great number of affiliated colleges, mostly separated from each other by great distances, and all organized as self-contained teaching institutions. A "new synthesis" is required. For the outlying colleges a distinct organization is proposed under a Board of Mofussil Colleges. The best of the Calcutta colleges will form the constituent colleges of a teaching University. They are to preserve their individuality, and within the University will develop to the full their own social life, but they must no longer aim at being "virtually self-contained and self-dependent"; instead of this they "must strive after the far higher ideal of being free co-operating partners in a great enterprise."

For the administration of the University thus reconstructed the Commission propose "a complete departure from the system of University government which has been traditional in India since 1857." Senate and Syndicate disappear, and, for the future, the management of the affairs of the University is to be apportioned among three bodies, known respectively

as the "Court," the "Executive Council," and the "Academic Council." This division of powers is based on a reasoned exposition (in Vol. III) of the essential "organs" of University government. The first is a large body to keep the University in touch with public opinion and alive to the varied requirements of the community. It must represent all interests, and would therefore in Bengal need to be a very large body; the Commission suggest not less than four or five hundred members. The Court would have to do with fundamental legislation, and would exercise a distant supervision over University finance. The second is a small body of seven-teen for practical business management, with large powers of control over finance, and, through finance, over University policy in a broad sense. The third, the Academic Council, is to be a body of moderate size (eighty to a hundred members are suggested) composed entirely of University teachers. It is to have full responsible control of all interests purely academic, and especially of the teaching of the University. This is the innovation to which the Commission attach the greatest importance. Of the Academic Council they say: "Here is the real heart of the University. The other elements may be and have been dispensed with, though not without loss; this cannot be dispensed with without sacrificing the essential character of a University."

The duration of the period of study for the Bachelor's degree is to be three years. The Commission lay great stress on the marked differentiation of Honours courses from Pass, in order to assure opportunities of suitable training to abler students. This, which has often before been advocated, would make an important change; for at present in Calcutta University Honours candidates are weighted with the necessity of attending all Pass lectures in their subjects: Honours lectures are additional. But the greatest change which the Commission propose in respect of University studies is that they should begin at the end of what are now the two first years of the degree course, that is at the stage marked by the Intermediate Examination of the University. This is an essential factor in the whole scheme of reconstruction: for it at once lifts the plane of University study and relieves the colleges doing University work of the thousands of students in intermediate classes. It has often been pointed out that the studies of these two years by their character and by the age of those who take them belong more properly to school education. This view is now ratified by the deliberate judgment of the Commission, and they propose to make it effective by expressly organizing these two years as the culmination of a complete school course and advancing the commencement of the University course to a point two years beyond the present Matriculation Examination. This brings us to the secondary schools.

At the present time there are seven hundred schools linked to Calcutta University by "recognition." Recognition entitles a school to present candidates for the matriculation examination. The question whether the University should continue to be the recognizing authority was referred to the Commission. The report passes the secondary schools in review with the same thoroughness as the University, and comes to the conclusion that the inefficiency of secondary school education as a whole in Bengal is nothing short of calamitous. Apart from the wretched equipment of many schools owing to poverty of resources, the very conception of the true function of the secondary school is disastrously obscured by the complete subordination of school organization to the Matriculation Examination, to the exclusion of all other aims and ideals. "Secondary education in Bengal is preparing candidates, not making men." "It is on the weakness, and more than the weakness, on the deadening ineffectiveness and intellectual sleepiness of the high schools that the critic would lay his finger, if asked to point to the capital defect in the higher education." "The root of the matter lies in the reform of secondary education."* The remedial measures advocated turn on the setting up of a new "authority," to be known as

the "Board of Secondary and Intermediate Education." This Board, consisting of from fifteen to eighteen members, seven of whom would directly represent the Universities (Calcutta and Dacca), is to have full jurisdiction, not only over all the existing high schools (thus taking over responsibilities at present awkwardly divided between the University and the Government Education Department), but also over the stage of education represented by the two first years of the present University course (normal age sixteen to eighteen). For the work of these two years special institutions called Intermediate Colleges are to be brought into being; but the Commission wisely also contemplate the possibility of uniting them to high schools suitably equipped. The Board would control the whole of this enlarged secondary education, arrange the courses of study and manage two public examinations which are to take the place of the present Matriculation and Intermediate Examinations. It would administer at its discretion the whole of the funds to be assigned by Government for secondary (and intermediate) education. It is specially intended that there shall be courses of study at the intermediate colleges planned to lead to practical careers as well as to the University, and that these institutions should make an important contribution to the training of teachers.

The main proposals of the Commission are boldly conceived, are planned on a large and comprehensive scale, and worked out with minute care. The Commission perceive—and this is one of the supreme merits of their work—that their proposals cannot be carried out with any hope of success, unless they have the support of educational opinion in Bengal. It is more than acquiescence that is wanted, more even than bare approval: "A wave of public opinion supporting the action of a new representative central authority can alone raise the present system to a new level of usefulness and open out new educational opportunities." The potentiality of such support the Commission think they discern. "The belief that education can give new life to Bengal grows apace." "It is the belief in education for its own sake, a belief which, though often indiscriminating, is ardent and sincere, that gives its chief significance to the movement now spreading in Bengal." "If rightly directed . . . the forces which are at work in the new movement are powerful enough to transform education in Bengal and to make every school and college better than it has been." This is the Commission's confession of faith. In fact, the whole report is an appeal to enlightened opinion in Bengal to rally to the support of a great public effort to raise the level of higher education.

The Commission's arguments and conclusions, while faithfully adjusted throughout to whatever experience has taught of the conditions of the best in education, are in every case based on a careful sifting of the replies of the correspondents who responded to the *questionnaire* issued by the Commission on arrival in Calcutta. The questions (twenty-three in number with frequent subdivisions) were sent to 671 persons: replies were received from 412. The report is therefore an invaluable storehouse of opinion, and mainly Indian opinion, on the questions discussed. It is more than that. To use once more the words of the report: "We hope that what our correspondents have written may prove to be the beginning of a new movement of educational opinion in the Presidency. Their replies record the thoughts and feelings of the educated classes in the community upon a question of supreme importance at a turning point in the history of India and of the Empire."

ASSOCIATION OF ASSISTANT MASTERS.—The annual meetings of this Association will be held at the London Day Training College, Southampton Row, W.C.1, on January 1, 2, and 3, 1920. The Council will meet on all three days, and the general meeting of members will be held on January 2, when Mr. Fisher will deliver an address. The annual dinner will be held at the Holborn Restaurant on January 2. There will be an exhibition of books and apparatus.

* Dr. Brajendranath Seal.

PERSONAL PARAGRAPHS.

By the death of Mr. Arthur Ainger, M.V.O., at the age of seventy-eight years, a notable figure has been removed from Eton College. Son of the Rev. T. A. Ainger, Vicar of Hampstead, he went to Eton in 1853 as a King's Scholar, and left in 1860. He was Newcastle Select in 1859-60 and College Wall 1858-9, and went as a scholar to Trinity College, Cambridge, where he took a First in Classics. He returned to Eton in 1864 as an assistant master, and was a house master for many years, retiring in 1901. He was a successful and popular master in his younger days, but in later years he was better known as the Eton poet. Mr. Ainger had a facile and fertile pen. He was the author of the spirited and beautiful "Carmen Etonense," the Latin school song, as well as of the well known "Vale." Lately he published the popular "Eton Sixty Years Ago." Nobody knew Eton longer or better than Mr. Ainger; his whole life, indeed, was dedicated to the interests of the College. A sound and clear teacher and an elegant scholar, he preserved admirable and friendly discipline by means of a dry and ready irony, which was never harsh or unamiable, and his justice, courtesy, and unruffled good humour have endeared him to a generation of Etonians past and present.

* * *

THE sudden death of Miss Muriel Thompson, Vice-Principal of Cherwell Hall, Oxford, at the beginning of the autumn term, is an irreparable loss to the college. Miss Thompson did brilliant work at the Manchester University. Her connexion with Cherwell Hall dates from 1906. She was successively student, assistant mistress at the Milham Ford School, and lecturer and bursar at Cherwell Hall. She was appointed Vice-Principal of Cherwell Hall in July last, to the great satisfaction of all who had witnessed the value of her work.

* * *

MR. J. A. L. ROBSON, who has recently retired from the position of Secretary for Higher Education under the Durham County Council, has held office under the Council for more than twenty-seven years. His previous experience included some seven years as managing secretary of the Keighley (Yorks) Technical Institute. The rapid development of the Institute—now famous throughout the country—was due largely to Mr. Robson's zeal and powers of organization. He was appointed Secretary of Technical Instruction in Durham in 1892. Under Mr. Robson's guidance, facilities for technical instruction were provided throughout the county, and when, under the Education Act of 1902, the Council became the Authority for elementary and all forms of education other than elementary, he was made Secretary for Higher Education. His career is, indeed, identified with the history of technical and secondary education in the county, and Durham has every reason to be proud of its educational position created under his organization.

* * *

THE growing interest taken by school teachers in public affairs is reflected in the election of Mr. J. T. Francombe as Lord Mayor of Bristol. Mr. Francombe is ex-head master of St. Mary Redcliffe Boys' School, Bristol. During his tenure at the school over ten thousand boys passed through his hands, and the Old Boys' Society is one of the oldest of its kind in connexion with an elementary school. Mr. Francombe has taken a prominent share in educational activities for many years, and since his retirement he has devoted himself to public work on the Education and other Committees of the Council.

* * *

MR. D. G. WILLIAMS has accepted the head mastership of the Crypt Grammar School, Gloucester, in succession to Dr. Crees, whose resignation was referred to in our last issue. Mr. Williams is an old pupil of Llandovery College, and a

classical scholar of Corpus Christi College, Oxford. He obtained First Class Lit. Hum., 1909, and for the last four years has been classical master at Bradford Grammar School.

* * *

MR. R. SOMERVELL, assistant master at Harrow School since 1887, who succeeded to the Large House, West Acre, on the retirement of the late Mr. J. Stogdon, in 1904, and has held the appointment of Bursar at Harrow School since 1888, is retiring from the latter position at the end of the term. He left his school house a few years ago and was succeeded by Mr. W. G. Young. Harrovians the world over will regret his retirement from a position in which he has earned the approbation of all. He was chairman of the military tribunal during the war, and has for many years taken an active interest in the public welfare of Harrow town.

* * *

THE REV. F. J. LEYS, who was recently elected Provost of Worcester College, Oxford, in succession to the late Dr. Daniel, was at one time an assistant master at Radley. He went up to Worcester from Sherborne School in 1883, and was placed in the First Class by the Classical Moderators in 1884 and in the Second Class in "Greats" in 1886. He received the Chancellor's Prize for Latin Verse in 1885, and, after service at Radley, returned to his college in 1889 as Lecturer in Classics, being afterwards appointed Fellow and Classical Tutor. He has been for some years one of the University representatives on the Oxford Town Council, and he is the author of many papers on educational subjects.

* * *

THE REV. H. J. CHAYTOR, Head Master of Plymouth College since 1908, has been elected Fellow, Dean, Chaplain, and Lecturer in Modern Languages at St. Catharine's College, Cambridge. Mr. Chaytor is an old pupil of Durham School, and graduated from All Souls College, Oxford, with Second Class Mods. 1891, and Third Class Lit. Hum. 1893. He also studied at Geneva University, and has had teaching experience at Stratford-on-Avon; Merchant Taylors, Crosby; and King Edward VII, Sheffield. He is the editor of many modern language texts, and has made considerable research in Provençal literature. During the War he acted as chaplain to the Third Division in France.

* * *

DR. W. P. MILNE, who was appointed Professor of Mathematics at Leeds University in September last, has been a mathematical master at Clifton College, Bristol, since 1907. An old pupil of Aberdeen Grammar School, he became a student of the University of St. Andrews and a scholar of Clare College, Cambridge. He was Fourth Wrangler in 1906 and obtained First Class in the Maths. Tripos, Part II (2nd Div.), in 1907. He is the author of many treatises and papers on mathematics, and has been a prominent member of the London Mathematical Association and of the Assistant Masters' Association.

* * *

MR. J. H. DAVIES, the new Principal of the University College of Wales, Aberystwyth, is well known in Welsh educational life, and is regarded as the greatest living authority on Welsh bibliography. He has been the Registrar of the College for over fourteen years, and during the long illness of the late Principal Roberts he was responsible for a large share of the government of the college. He took his M.A. degree at Lincoln College, Oxford, with honours in jurisprudence, and was formerly a barrister on the South Wales circuit.

* * *

WEST DOWNS Preparatory School, Winchester, has suffered a grievous loss in the death of its head master, Mr. Lionel Helbert. A scholar of Winchester College and Oriel College, Oxford, he obtained Second Class Classical Moderations in 1891. On leaving Oxford, he was for some years a clerk in

the House of Commons, where his quick interest, humour, and good fellowship made him widely popular. He occupied his spare time in teaching, and, when the opportunity opened, it was plain that he was a born schoolmaster. In his school work at West Downs he inspired confidence by his courage and ability. He made the school—or, rather the boys in the school—the purpose of his life, and spared no effort to improve conditions for all connected with the institution.

TOPICS AND EVENTS.

SCIENCE MASTERS' ASSOCIATION.—The Science Masters' Association will hold their annual meeting at the London Day Training College on January 6 and 7. On January 6, at 11 a.m., the President's address will be delivered by Mr. W. W. Vaughan, Master of Wellington College. This will be followed by the business meeting. At 3 p.m. discussions will be opened by Mr. W. J. Gale on "The Teaching of Organic Chemistry," and by Mr. F. W. Hodges on "Biology in the School Syllabus." At 5.15 p.m. a discussion on laboratory management has been arranged, when Mr. H. Preston will speak on the cost of apparatus, and a paper will be contributed on the training of assistants. On January 7, at 10.30 a.m., papers will be read on "Science in the Early Stages"; Major V. S. Bryant, on "Science at the Preparatory School and in the Common Entrance and Entrance Scholarship Examinations of Public Schools"; and the Rev. C. J. S. O'Grady on "Teaching Junior Forms." At 11.45 a.m., on the same day, Sir Richard Gregory and Mr. G. D. Dunkerley will speak on the divorce of laboratory and classroom courses.

NORTH OF ENGLAND CONFERENCE.—The North of England Education Conference will be held at Southport on January 9 and

10. Mr. Fisher, President of the Board of Education, will give the inaugural address. Sir Henry Hadow will read a paper on "The Education of Adults." Mr. J. M. McTavish, of the Workers' Educational Association, will open the discussion. Among other items we notice Dr. Cyril Norwood on "A Common Examination for School Leaving and Entrance to a University"; "Art—its Place in Education," Mr. R. A. Dawson (Manchester) and Prof. W. R. Lethaby; "Central Schools and Secondary Schools," Mr. C. W. Crook (Wood Green) and Mr. A. H. Whipple (Blackburn); "Modern Developments in Physical Education," Mr. H. M. Coulson (Southport); "Play Centres," Mr. J. W. Twidale (Liverpool); "Methods of Selection of Children for Further Education—(a) Educational Tests and Psychological Tests of Educational Ability and Vocational Aptitudes," Prof. Pear (Manchester); "(b) Examination Tests and other Methods," Mr. J. L. Paton (Manchester); "The Teaching of Music," Dr. Carroll (Manchester); "Music—Its Place in the Educational System," Mr. Percy Scholes; "Juvenile Employment," Mr. Spurley Hey (Manchester); "After-care," Miss Macadam; "The Teaching of History," Mr. F. S. Marvin; "The Teaching of Social Economics and Political Philosophy in Public Schools," Mr. D. C. Somervell; "Continuation Schools in Urban and Rural Areas," Major Ernest Gray (N.U.T.) and Mr. W. A. Brockington (Leicestershire).

FIFTY YEARS OF SCIENCE.—From its foundation in 1869, *Nature* has held a unique position among the scientific journals of the world. Week by week it has laid before its readers the latest results of research, abstracts of important papers, full reports of new books, and original articles by men eminent in the various departments of natural knowledge. It has also rendered incalculable services by keeping the claims of pure science insistently before a public always disposed to underrate its importance. For, as Sir Richard Gregory remarks, "the great advances in the industrial sciences of modern times, those which have raised the industrial and commercial life of the community, and so enormously increased its wealth, have had their origin in University laboratories and like places of what may be termed academic study." It was fitting that the completion of fifty years of such work should be marked by the issue, on

(Continued on page 798.)

HODDER AND STOUGHTON THE NEW TEACHING SERIES

THE NEW TEACHING SERIES STRIVES TO BUILD UP
THE NEW HUMANISM ON THE BASIS OF THE STUDENT'S
IMMEDIATE ECONOMIC INTERESTS AND ENVIRONMENT.

Professor JOHN ADAMS:

"Your Series *exactly* meets the needs of
the Educational situation just developing."

Citizenship. By F. R. WORTS, M.A. 4/6 net.

"A careful and valuable book . . . written by a skilled teacher of the subject . . . shows in very simple, clear English how our various institutions, local and central, came to be what they are, and shows what citizenship is, and the relation of the man or woman who votes on local or imperial questions to the complexities of government."

Times Educational Supplement.

"One of the most valuable and complete books on citizenship we have yet seen. . . ."

Schoolmaster.

Chemistry from the Industrial Standpoint. By P. C. L. THORNE, B.A. 4/6 net. Illustrated.

Modern Industrial History. By F. R. WORTS, M.A., Senior History Master, Bristol Grammar School. 4/6 net.

Professor J. J. FINDLAY:

"The series will certainly be of great value for many purposes, and especially for young persons who are studying with a view to their livelihood."

The Foundations of Engineering. By W. H. SPIKES, B.A. Illustrated. 4/6 net.

"The author introduces the student to the general principles underlying a science which is so wide in its scope that even a practical engineer can as a rule aspire to excellence in only one branch of the subject. It is part of the value of a work of this kind that the ordinary reader can follow the developments of engineering, and arrive at a clear understanding of the 'reasons why.' The book should be very useful also to those who are going through the 'shops.'" *Athenæum.*

Applied Botany. By G. S. M. ELLIS, B.A. 4/6 net. Illustrated.

The Natural Wealth of Britain: Its Origin and Exploitation. By S. J. DULY, B.A. 130 Illustrations. 6/- net.

Write for descriptive New Teaching Series pamphlet.

H. G. WELLS'

Great New Work

THE

OUTLINE *of* HISTORY

THE WHOLE STORY
OF LIFE AND MANKIND

CLEAR—COMPACT—FULL AND COMPLETE

A brilliantly-written and inspiring view of the whole History of Life. A great and valuable Educational undertaking. Written by a writer who is also an experienced and skilful teacher, assisted by a group of our greatest living historians and scientific writers.

IT IS an exact, luminous, and concentrated Encyclopædia of the Past, with hundreds of Maps, Charts, and Illustrations of the most helpful and illuminating nature.

IT IS not a mere essay, but a clear and complete summary of the latest knowledge. IT IS the whole History of Life and Mankind fused into one epical narrative.

IT IS THE FIRST BOOK OF ITS KIND

THE OUTLINE OF HISTORY is an attempt to tell, truly and clearly, in one continuous narrative, the whole story of Life and Mankind, so far as it is known to-day. This universal history is at once something more and something less than the aggregate of the National histories to which we are accustomed. It has been written primarily to show that **history as one whole** is amenable to a more broad and comprehensive handling than is a history of special nations and periods.

Mr. Wells begins with the oldest of all human problems—the Origin of the World, the early Beginnings of Life, and the Ancestry of Man. Of all this it is now possible to tell a plain story. He proceeds to "outline" the history of mankind—the Rise and Fall of the Early Empires—the Rise of Christianity—the American Revolution—the French Revolution—the Adventure of Napoleon—the Story of the Great Powers down to the German Disaster.

EXPERTS COLLABORATE

Mr. Wells has had the assistance of various expert authorities, such as Sir E. Ray Lankester, Sir Harry Johnston, Professor Gilbert Murray, Mr. Ernest Barker, and others, for the purpose of obtaining accuracy in every detail.

600 Illustrations, Maps, Charts and Drawings
With Many Beautiful Plates Printed in Full Colours

To be published in about 20 Fortnightly Parts at 1/2 each

Ask your Newsagent to-day to deliver each part as published. Full prospectus post free from
GEORGE NEWNES, Ltd., 8-11, Southampton Street, Strand, London, W.C.2.

November 6, of a special Jubilee Number of *Nature*. In this number the scientific progress of the period is surveyed in a series of some forty striking articles by distinguished authorities: astronomy, biology, geology, medicine, physiology, chemistry, physics, and engineering, in their various aspects, come under review in turn. It is an impressive record of achievement which would have appeared incredible to men of science of half a century ago. Such a synopsis will be welcomed by all who are interested in scientific research, for it is a fascinating piece of history, as well as an authoritative summary of present-day views. It is to be hoped that teachers of science in schools will make use of the excellent material it affords for lessons. Nothing is more likely to stimulate the enthusiasm of young students than to learn from the investigator himself what are the problems at which he is actually working.

A NEW MONTHLY JOURNAL OF THE PROGRESS OF KNOWLEDGE.—A Conference was called last January by the joint invitation of the President of the Royal Society, the President of the British Academy, and others, to frame a scheme for a journal which should present in popular form the recent results of research in the chief subjects of knowledge. A Committee was appointed to frame a scheme and their report has been adopted. The name *Discovery* has been approved for the new journal and a Trust has been established for its maintenance. Capt. A. S. Russell, M.C., D.Sc., Reader-elect in Chemistry at Christ Church, Oxford, has been appointed Editor. The first number will be issued by Mr. John Murray, on January 15 next, at the price of sixpence. All the chief specialist associations have undertaken to supply, year by year, for the Editor's use, a list of contributors capable of representing different sides of their particular branch of knowledge. Among those Associations that have already pledged themselves to take part are the National Union of Teachers, the Co-operative Union, and the Associations of Head Masters and Head Mistresses. A prospectus will shortly be issued, but meanwhile orders for copies will be received through any bookseller or newsagent or from the publisher, Mr. John Murray, 50a Albemarle Street. The journal will at first contain about twenty-four pages of matter and will undertake in the course of the year to represent the progress of knowledge in all its chief branches.

NATIONAL COUNCIL FOR DOMESTIC STUDIES.—The National Council for Domestic Studies was founded in October, 1917, as a result of the reconstruction of an examining body known as the National Union for the Technical Education of Women in Domestic Subjects. A meeting held in October last was the first occasion on which the Council has met since its formation. The failure to meet before has been due to the hampering conditions produced by the war. The Council shares an office at 70 Hastings House, 10 Norfolk Street, Strand, London, W.C.2. The Education Sub-Committee have reported to the Council that reforms in the teaching of domestic subjects must be preceded by reform in the training of the teacher and that the present system of organization which isolates domestic subjects teachers in "centres," and withdraws a section of a class from ordinary school work for instruction in cookery, laundrywork, or housewifery, is responsible for much that is unsatisfactory in the present methods of teaching domestic subjects. Full particulars of the current work of the Council can be obtained from the honorary secretary at the above address.

THE INDUSTRIAL WELFARE SOCIETY.—The Industrial Welfare Society exists for the purpose of focussing and developing the many activities, industrial, educational, and recreational, indicated by the word "welfare." The society was formed originally for the purpose of dealing with industrial boys, but recently its scope has been enlarged in order to embrace all industrial workers. The object of the society is to retain for industry itself the responsibility for, and the direction of, industrial welfare work. The society can assist employers of labour—(1) by discussing with them schemes of welfare work applicable to their own particular works and circumstances, (2) by training and recommending suitable persons for positions as welfare supervisors, (3) by supplying welfare supervisors with information regarding various phases of welfare work. Membership consists of employers of labour and other interested persons, and the minimum annual subscription is five guineas. Further particulars may be obtained from the Director of the Society at Sanctuary House, Tothill Street, Westminster, S.W.1.

PENSIONS IN THE ISLE OF MAN.—The Board of Education
(Continued on page 802.)

UNIVERSITY OF LONDON PRESS

THE NEW REGIONAL GEOGRAPHIES

For Secondary and High Schools.

By **LEONARD BROOKS, M.A., F.R.G.S.**
Geography Master at the Wilham Ellis School.

Edited by **JAMES FAIRGRIEVE, M.A., F.R.G.S.**

- Book I. **The Americas** 3s. 6d.
Book II. **Asia and Australasia** 3s. 6d.
Book III. **Europe and Africa** 6s. 6d.

With specially prepared Maps and Illustrations.

Book IV. **A Senior School Geography** (In Preparation).

Ready 2s. 6d.

The British Isles with a large number of original Maps and Diagrams. Being part of Book III. and issued separately at the request of many teachers.

AN ECONOMIC GEOGRAPHY OF THE BRITISH EMPIRE

By **C. B. THURSTON, B.Sc.**
Geography Master at Kilburn Grammar School.

A complete survey of the geography and economic resources of the British Empire. The book is particularly suitable for the commercial classes of Secondary Schools and Colleges, and for Continuation Schools.

With many specially prepared Maps and Tables.

New Edition, 4s. 6d.

A SHORT HISTORY OF MODERN EUROPE

From the French Revolution to the Great War.

By **EUGENE L. HASLUCK, B.A.**

This volume sets forth in clear and interesting fashion the developments in European politics which have led to the outbreak of the Great War in 1914 and provides the necessary material for middle and senior forms taking a course in Modern European History, and a thoroughly sound explanation of the causes of the World War.

"A useful and clearly written introduction to the study of European history not by any means overburdened by facts."—*The Times*.

With many New Maps. Ready, 3s.

A MATRICULATION ENGLISH COURSE

By **B. J. SPARKS, B.A., B.Sc. Cloth, 3s.**

This book covers efficiently the whole of the ground in English Grammar and Composition for the London University Matriculation and Examinations of similar standard.

GEOGRAPHY AND WORLD POWER

By **JAMES FAIRGRIEVE, M.A., F.R.G.S.**

Lecturer at the London Day Training College.

The *Times* critic says: "It is a valuable review treating in a broad philosophic way the influence of physical facts upon history": while another reviewer states: "I have learnt more history from the book than I had ever learnt before, and it has enchanted me more than the most thrilling romance I have come across"; and, in the words of the *Glasgow Herald* reviewer, "One could not desire a more fascinating introduction to the study of world history than this masterly analysis."

With over 80 Original Sketch Maps and Diagrams.

New edition, thoroughly revised, with additional chapters and maps.

New Edition, 5s.

A SHORT HISTORY OF MODERN ENGLAND

From Tudor Times to the Present Day (1485-1914)

By **FREDERICK BRADSHAW, M.A. (Oxon.), D.Sc. (Lond.).**
Sometime Senior Hulse Scholar of Brasenose College, Oxford; Lecturer in Modern History at Armstrong College in the University of Durham.

With full-page Maps. Crown 8vo. viii + 390 pp. Price 3s.

THE STUDENT'S GUIDE

Making the Most of One's Mind.

By **JOHN ADAMS, M.A., B.Sc., LL.D.**

Professor of Education in University of London.

The *Times Educational Supplement*.—"Dr. Adams has written an admirable book, and a student may be regarded as fortunate who avails himself of its wisdom."

Fifth Impression. 4s. 6d. net. Postage 6d.

A SCHOOL CHEMISTRY

By **W. H. RATCLIFFE, B.Sc., F.C.S.**

Chemistry Master at Tenison Schools.

This book provides a two years' course in Chemistry as final preparation for the London University Matriculation and examinations of similar standard.

Part I, 3s. Part II, 1s. 6d.

WEATHER CHART EXERCISES

(British Isles and West of Europe)

By **L. M. ODELL, B.Sc.**

This book provides practical exercises in meteorology of the type required for London Matriculation and examinations of similar standard. Full page weather charts and squared paper for graphs are included, as well as valuable weather statistics, and tables for conversion of rainfall and pressure values from the old system to the new one recently adopted by the Meteorological Office.

Crown 4to. 32pp. 9d. net.

LONDON: UNIVERSITY OF LONDON PRESS, 18 Warwick Square, E.C.4.

THE ATHENÆUM

FRIDAYS

SIXPENCE

THE Athenæum has come to be regarded as the most scholarly of the Critical Journals. Since its foundation in 1828 it has had the advantage of the best literary talent of the day, most of the great literary names of the century having been associated with it.

In its present form, besides original work, it contains informed Reviews of all important English publications, an annotated list of New Books, a critical record of Foreign Literature, and regular articles on Science, Art, Music, and the Drama, thus providing an ordered survey of intellectual movements throughout the world.

The Athenæum is edited by Mr. John Middleton Murry, and during the present year has printed contributions from Conrad Aiken, Dr. Ernest Baker, Oscar Browning, Clive Bell, Edward J. Dent, T. S. Eliot, J. Fitzmaurice-Kelly, Robin Flower, E. M. Forster, Roger Fry, W. W. Gibson, Thomas Hardy, G. F. Hill, André l'Hôte, Aldous Huxley, Robert Lynd, Sylvia Lynd, R. R. Marett, Katherine Mansfield, Walter de la Mare, Vernon Rendall, Bertrand Russell, Guido Ruggiero, George Saintsbury, George Santayana, R. A. Scott-James, J. T. Sheppard, James Strachey, Lytton Strachey, Frank Swinnerton, J. W. N. Sullivan, H. M. Tomlinson, Paul Valery, Virginia Woolf, Leonard Woolf, and A. E. Zimmern.

We want you to become acquainted with The Athenæum, and, with that object in view, will you permit us to send you a **SPECIMEN COPY?**

One will be posted to you on receipt of a postcard addressed to

The Publication Dept.,
THE ATHENÆUM,

PATON'S LIST of SCHOOLS and TUTORS

An Aid to Parents in the Selection of Schools.

23rd ANNUAL EDITION NOW PREPARING.

EVERY YEAR THOUSANDS OF PARENTS CONSULT
THIS BOOK.

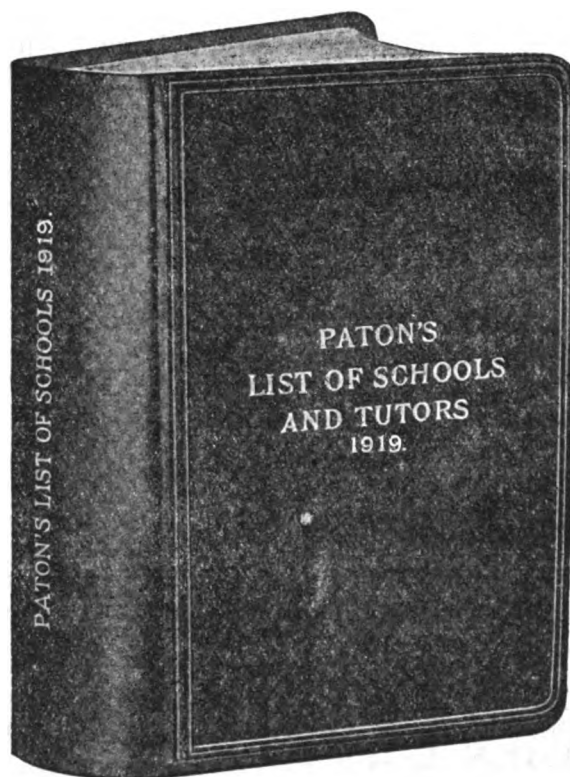

"I am glad to find I have got another pupil this term through the advertisement of the school in your book, so am glad I was persuaded to keep it in."

"Please insert my pages as usual. I believe I get more pupils from that than from any other source."

"I enclose a request to have my notice renewed. I would not for anything leave it off now."

"When I first came here I spent over £50 in six months advertising in the leading papers—result, **one** boy. Then I came under your Agency—result, a **steady stream** of boarders every term, more than filling up the vacancies caused by boys leaving. I have already had to open another dormitory, and am on the point of 'venturing' on another boarding house."

"I find it most useful to my patients when seeking information about sending their boys and girls away, and have kept a copy in my waiting-room for some years."

National Library of Ireland, Dublin.—"This important publication occupies a prominent place in our Reading Room, and is in frequent use."

"I have much pleasure in renewing the advertisement in your excellent Guide, and should like to take the opportunity to express to you my best thanks for the invaluable help of your Agency."

"I enclose order form, duly signed. . . . I am more than grateful for the excellent service your Agency does my school."

"I am returning the advertisement at once with a little addition. . . . We have this term **four** pupils introduced by you, and I am much obliged to you for your help. It makes all the difference in these difficult days whether one has a full school or not."

**Specimen Copy and full particulars sent free of charge to
Head Masters and Head Mistresses.**

J. & J. PATON, Educational Agents,
143 CANNON STREET, LONDON, E.C.4. Telephone: Central 5053.

"IT IS CLEAR

that a capable agent who has pursued his calling for years will have gathered, by visits, by personal interviews, and by correspondence, a globe of precepts, and that his profession of recommending schools is no idle pretence."—*The Journal of Education*, June, 1916.

This is the definition, by a competent judge, of what should constitute a
USEFUL SCHOLASTIC AGENT.

"Two years ago you sent me a pupil named ———. Through her parents I have had **four** good pupils this year from four different places, and through two of these I have **five** more coming this term: that is, ten pupils from paying **one** commission."

"I am pleased to tell you our numbers are quite full for next term, but we expect to have several vacancies for September. Thank you for all you have done to bring this satisfactory state of affairs to pass."

"I should like you to know that these pupils that you have recommended to me seem to be satisfactory in every way, and that you have my sincere thanks for the help you have given."

"I am grateful to you for sending me inquiries so consistently, and I have found your Agency most helpful in securing boarders."

"I have now seven boys who have been introduced to me through you, and I take this opportunity of thanking you, and hope that you will be able to send me others in the near future."

"The child is a most satisfactory pupil, and I am very much obliged to you for the introduction."

"You will remember advising me to send my daughter to ——— School. I feel it would be ungrateful not to write and tell you how thankful I am I took your advice. She came home looking the picture of health, and is as happy as the day is long."

"Owing to your splendid efforts my boarding accommodation is taxed to its uttermost, and I must reluctantly ask you to stop sending me notices for the time being."

If you have not yet made trial of our services, we shall be glad to hear from you, with particulars of your School.

J. & J. PATON, Educational Agents,

143 CANNON STREET, LONDON, E.C. 4. Telephone: Central 5053.

have decided that the provisions of the School Teachers (Superannuation) Act, 1918, shall be extended to the Isle of Man, subject to the following modifications. In the Act the expression "Government Department" shall include any employment the remuneration of which is paid by the Legislature or Government of the Isle of Man. In the definition of recognized service in the Act, references to the Council of Education of the Isle of Man shall be substituted for references to the Board. In the definition of recognized service, the conditions to be prescribed shall, as respects service in the Isle of Man, be conditions prescribed by the Council of Education of the Isle of Man. In the definition of grant-aided school, the word "Tynwald" shall, as respects schools in the Isle of Man, be substituted for the words "Parliament from or by the Board or from or by any Public Department whose place is being taken by the Board." The term "Public Elementary School" shall include any school recognized as a public elementary school under the law in force in the Isle of Man.

STAMMERING CHILDREN.—There are about 1,200 stammering children attending elementary schools in London. The London County Council, realizing that such children are handicapped in getting employment, have decided to organize special classes for them before they leave school. The classes will be started in different parts of London, and teachers, specially qualified for dealing with speech defects, will be appointed. The travelling expenses of children attending the classes will be paid by the Council. The children will receive about twenty lessons in speech training, and the Council hope that the worst defects of stammering, at least, will be remedied, if not cured, so that such children on leaving school may have equal chances in life with other children. It is found that stammering children include quite a large proportion of bright and imaginative children.

CONFERENCE OF EDUCATIONAL ASSOCIATIONS, 1920.—This Conference will be held at University College, Gower Street, W.C.1, from December 31 to January 10. It will be inaugurated by an address by Mr. Fisher, on "Our Ignorance," which promises to be as attractive as that of Mr. Fisher's address at last year's Conference. Thirty-six societies have already signified their intention of holding meetings, a considerable advance on last year's record. Among the Societies participating for the first time are two representative of music, one of the drama, and one of folk dancing. There are to be two joint conferences of all the participating associations on January 3 and 9. At the first the work of Continuation Schools will be discussed under the chairmanship of Sir W. Ashby, of Birmingham University. The speakers are to be Mr. Spurley Hey, of Manchester, Mr. Beresford Ingram (if possible), Miss Enright, principal of Selfridge's Continuation School, and Mr. Rokesby of Harrod's, Ltd. The subject of the second Conference is to be Adult Education. Canon Masterman will preside, and Mr. Tawney, Fellow of Balliol, will introduce the subject, followed by Mrs. Ensor, of the Educational Fraternity.

PRIMARY SCHOOL NOTES.

Additional Duties for Teachers.

THE various duties voluntarily undertaken by many teachers during the war show a tendency to persist, and in some districts a concerted attempt is being made by teachers to secure pre-war conditions of school service. There is little doubt that the organizing ability of school masters and mistresses has proved valuable to many causes, and their services have been none the less appreciated because they were rendered gratuitously. The Ministry of Labour, for example, are keenly desirous that head teachers should fill in the forms issued under their auspices in connexion with the work of Juvenile Advisory Committees; while there is a feeling on the part of the authorities concerned that School War Savings Associations should be continued in the interests of national thrift. Teachers have sympathy with these and other movements related to education; as professional men and women they are responsible for the proper instruction of their pupils. So far, therefore, as the time of teachers is occupied in subjects extraneous to the school curriculum, by so much must the work of instruction be neglected. As the inspectors of the Board of Education have standards by means of which the attainments of pupils are assessed, it follows that the schools of teachers who are most occupied in performing additional duties stand in danger of falling from such standards. In existing circumstances, and in view of

(Continued on page 804.)

A SELECTION OF A. & C. BLACK'S PRIZE BOOKS.

CHIEFTAIN AND CHUM.

THE STORY OF A HIGHLAND HOLIDAY.

By **Ascott R. Hope.**

Large crown 8vo, cloth, with 8 full-page illustrations by Allen Stewart. Price 5s. net.

This story, though of independent interest, makes a sequel to the author's *Hero and Heroine*, that recorded a strange case of sisterly devotion, complicated with an English boy's admiration for a school-fellow who at the end of the book seems cut off from him by unexpectedly succeeding to a Scottish peerage. In the present volume, this young Sassenach, his head full of romantic notions of the Highlands, visits his friends at an Ancestral Castle on the West Coast, when certain humorous and serious experiences open his eyes to the fact of Scott's novels not being up to date. But the two lads come in for such adventures as are still to be met with in the Highlands; then, by a lucky accident, the visitor is the means of restoring an ancient house's tumble-down fortunes.

SCHOOLBOYS OF OTHER LANDS.

By **Ascott R. Hope.**

Large crown 8vo, cloth, with 8 full-page illustrations by Walter Paget. Price 5s. net.

In this volume Mr. Hope Moncrieff has drawn, for the benefit of British schoolboys, pictures of the life of boys at school in other countries of Europe. They do not all have the happy lot of boys in these islands, but they manage to extract a good deal of happiness from their life at school, and, in addition to the interest of the sketches, there is plenty of humour to be found in the pages of the book. The period described is the latter part of the 19th Century.

THE MCKICKSHAWS AT SCHOOL.

By **Ascott R. Hope.**

New edition with entirely new illustrations by T. M. R. Whitwell. Large crown 8vo, cloth. Price 5s. net.

This is a series of humorous chapters of bygone school life, from which boys of to-day can note certain changes that have been passing over schools as well as other national institutions. The McCuishzie (pronounced, by the irreverent, McKickshaw) boys are the centre around which most of the scenes revolve—hence the title.

CHARLIE'S MASCOT.

By **H. C. Hooke.**

Large crown 8vo, cloth, with 8 full-page illustrations by Walter Paget. Price 5s. net.

In this story of happy, cheery boys, the author has selected as his plot the mystery which surrounds an epidemic of bound-breaking. Masters and boys alike are thwarted in their attempts to identify the culprit, and many thrilling events and tight corners result. The mystery when solved amazes the entire school. Woven into the plot is much fun and more sport.

The "Peeps" Series.

PEEPS AT THE BRITISH BLUEJACKET.

By **Patrick Vaux.**

Containing 12 full-page illustrations in colour by C. C. Titterton. Large crown 8vo, cloth. Price 2s. 6d. net.

This little volume is concerned with the life and work of our naval seaman in peace and war. How he lives in his "house" on the lower deck, and how he carries on with his part in the working of his ship, and many other "how's," are here described in an easy and graphic style that conveys fully and lucidly the details of information regarding the bluejacket's duties and general course of life in battleship, cruiser, destroyer, and submarine, not forgetting the trawler section.

PEEPS AT ANCIENT GREECE.

By the **Rev. James Balkie, F.R.A.S.**

Containing 16 full-page illustrations, 8 of them in colour. Large crown 8vo, cloth. Price 2s. 6d. net.

"Peeps at Ancient Greece" follows the method adopted in previous volumes of the series (Ancient Egypt, Ancient Assyria, and Ancient Rome) in attempting to reconstruct something of the life of the Greeks during the brief period when they were at the summit of their glory and their achievement. The colour-plates either represent historic Greek scenes and buildings or aim at the reproduction of characteristic features of Greek life; while the black and white illustrations reproduce some of the most famous specimens of Greek architecture and art.

T. Nos., Central 621 and 12080.

the great call made by the new Education Act upon the resources of teachers, it is essential that school staffs shall be able to attend exclusively to the routine of the curriculum. If it is necessary in the interests of the pupils that the scope of the curriculum should be extended in such manner as to include external subjects involving considerable clerical work on the part of the teachers, it is clear that there would be a strong case for the revision of the school syllabus and for assessing the methods of instruction. In any such revision the Board of Education would naturally take the initiative.

School Children and the Supply of Milk.

THERE is reason to believe that the prevailing high price of milk is preventing large numbers of children from obtaining it. The position is exceedingly difficult, and, until the results of the lack of milk on the constitution of young people can be definitely established by medical evidence, teachers can only emphasize the facts as they exist. It has been suggested that in the meantime supplies of milk should be made available for young children at reasonable rates by an extension of the principle of the bread subsidy.

The Abolition of Preparatory Departments.

THE unprecedented demand for secondary education, and the grave difficulty of building new schools, are compelling Local Education Authorities to consider the advisability of eliminating the preparatory departments of rate-aided secondary schools in order to find accommodation for older students. It has been pointed out that children of advanced primary education are being excluded from certain schools, while pupils of nine and ten years of age are being admitted who might with advantage be transferred to primary schools. The fact that the cost of educating a child in a secondary school is about four times that which obtains in a primary school makes a strong appeal to the average rate-payer, and the results of the recent local elections may go far to assist the movement in favour of restricting admission to rate-aided secondary schools to pupils who have satisfactorily passed the standard of a good primary school.

Salaries in Continuation Schools.

NOTWITHSTANDING the suggestion of the Board of Education that the salaries of teachers in the new Continuation Schools should approximate to the scales of secondary school teachers, there are no signs of a general adoption of such a principle. On the contrary, in a number of cases where Works Schools have been opened, the salaries of the teachers concerned have been fixed only after an exhaustive period of haggling. While it may be possible to staff pioneer institutions by teachers anxious to gain valuable experience for which they are willing to pay by accepting low salaries, there is no prospect that experienced teachers will serve in these schools unless generous scales of salary and conditions of service are definitely laid down. The work is likely to impose a heavy physical and mental strain upon teachers in view of the fact that the pupils will be of a peculiarly difficult age to deal with, while there will not be that definite home influence on the side of the teacher which is so frequently found in secondary schools. To a certain extent there is a similar necessity for the adoption of liberal scales for teachers working in junior technical and junior commercial schools.

N.U.T. Notes.

THE issue of the report on salaries by the National Joint Committee promises a period of great activity for the National Union of Teachers. The local associations will discuss the minimum scale as early as possible, and, at the special Conference of the Union on the 30th inst., representatives from the various districts will attend in order to record the opinion of their colleagues. As it is quite possible that the scheme recommended by the Joint Committee will fall below the rates of salary already being paid by the most progressive Education Committees, there is every prospect of vigorous developments in the salary agitations of the local associations, each of which will be naturally anxious to supplement the national minimum scale in accordance with its peculiar local conditions. The progressive increase in the cost of living has greatly aggravated the lot of teachers, and it has not tended to modify the attitude of those members of the Union who have been opposed to the temporary cessation of a fighting policy on salaries. It is clear that any substantial opposition to the findings of the Joint Committee would have the effect of discouraging the recruitment of the teaching profession, and this again would react unfavourably upon the prospects of introducing the vital clauses of the Education Act in their entirety.

DUSTLESS AND HYGIENIC SCHOOLS

On all
School, Laboratory, Library, &c., Floors and Linoleums of every description

USE

FLORIGENE

(A Registered Name suggested by FLOOR-HYGIENE)

(British owned)

EARLY in the **CHRISTMAS VACATION** for best results.

"Florigene" is an aid to the prevention of throat and other diseases, has been awarded the MEDAL of the ROYAL SANITARY INSTITUTE,

and is strongly recommended by Medical and other expert authorities.

It costs little, saves labour, and is easily applied by the unskilled. Not sticky—the ordinary daily dry sweeping alone required.

It is IMPORTANT to NOTE that

ONE APPLICATION of "Florigene" effectively allays the dust and dirt for **2 to 12 months**, according to the traffic, not only during each sweeping (without sprinkling of any kind), but also throughout all the intervening periods—which is even of greater hygienic importance.

"Florigene" has been continuously used for many years on the floors of The Royal Colleges and other important Government Buildings; also in numerous Colleges, Schools, Laboratories, &c., throughout the United Kingdom and Colonies.

Send for Medical Reports and Testimonials to the Sole Manufacturers—

THE USE OF ARCHÆOLOGICAL AIDS IN SCHOOLS.

By S. E. WINBOLT, M.A., Christ's Hospital.

THE objective method of teaching, in its more or less unconscious forms, probably goes back to prehistoric times; but, as a conscious philosophic system, dates from Comenius, about three centuries ago. The dictum of the "Great Didactic" is, first the presentation of the thing itself; if the thing is hard to come by, then pictures. Hence the *Orbis Pictus*. To Comenius succeeded Rousseau, from whose "Emile" I quote one sentence: "In general, never substitute the sign for the thing itself, save when it is impossible to show the thing." To Rousseau, Pestalozzi, who—in theory, at any rate—did more to establish the objective method than any other philosopher. "Sense impression of Nature," he says, "is the only true foundation of human instruction, because it is the only true foundation of human knowledge." The development of the method in Europe is fairly modern; in Germany, from 1850 onwards; in France, from 1878; in England, from about the same time, radiating from the Home and Colonial Training School in Gray's Inn Road; and in America from the Oswego (New York) Normal School.

Most of the modern movements in education owe their origin to the objective method; and there is a closer alliance than one would at first suppose between laboratory teaching of science, dramatization of literature, all uses of pictures, graphs, and maps, Nature-study, manual training, self-activity on the part of the pupil, and the direct method of language teaching. But it is well to enter a caution against two popular fallacies.

The first is that objective work should necessarily decrease as pupils get older. It is immaturity or inexperience in a special subject or situation which determines the amount of objective work required. It is not the age of the pupil that

should weigh, but his experience of the special subject in hand. Thus, a fifth-former does not want to count with beans, but it will do him good to examine Miss Croft's model of a Roman house or a Brucciani cast of a Greek inscription; or, better still, make both for himself.

The second fallacy is that you cannot have too much of objective presentation. As in all cases of the relation of concrete and abstract, the fact would appear to be that the word symbol is apt to become exhausted and anæmic, and requires to be refreshed occasionally by being brought into direct contact with the thing. Both in mathematics and classics instruction is always tending to be excessively abstract, wordy, bookish. This tendency it is our positive duty—and should be our positive pleasure—to resist by occasional returns to direct sense impression. But, for all that, we cannot afford to spoil the human effect of, say, a Penelope book of the Odyssey by interrupting the five or six hours required to read it by constructing a model of a loom, itself a five or six hours' job. Obviously, we must keep a sense of proportion, and often a delicate sense of proportion.

The upshot of the philosophy of the matter may be expressed in a sentence. There is probably no single type of educational method which has been so influential for good in the schools as objective teaching.

Let us assume, then, that objective aids to literary instruction are necessary. Teachers of Greek and Roman history and literature are still faced by two difficulties: where to get the material and how to apply it. The former question is partly solved by the collections of the Archæological Aids Committee, which have been steadily improving for the last six years. The answer to the second may be given briefly, under the headings of Time and Manner. The time to be taken from class-work should be at most an occasional ten or fifteen minutes, but this may often be supplemented by ten minutes after school time. The method, I believe, should be chiefly *ad hoc*. Thus, rather than give a more or less unrelated lesson on Roman coinage in general, when I come across a mention in Livy of *asses*, at the end of the period I would hand round specimens of "Aes Grave," and quickly explain the value and history of this particular series. But, if the lesson happens to be one on Greek or Roman history, I should feel myself justified in devoting a whole period to coinage. A week or fortnight beforehand I would put up in classroom a picture of ancient coinage and let it soak in. The curious will examine it. Then bring in the coins connected with the cities the class has been reading about. To each two or three pupils hand a tray of a dozen or so of coins, with instructions to puzzle out the legend, describe the obverse and reverse, to trace the connexion between the coin and history, to make a rubbing or drawing of certain coins. If there is time, interchange the trays. At the end, help them to solve difficulties.

This sort of use can be made of many kinds of our material. I usually bring in two or three objects as feelers, put them on my desk or side-table, and leave them to excite curiosity. The boys handle them and ask questions about them, when, after ten days or a fortnight, I bring in a group of similar objects and go into the whole matter.

In out-of-school time boys will do many things for themselves—make casts of coins (an easy and fascinating pastime), or a wooden or cardboard model in the manual school or in house. The interest excited is quite obvious: words and realities have been firmly connected for ever, a taste for archæology is sometimes implanted, and very little inroad has been made upon ordinary class time.

Now to grapple with detail. I venture to give my own first year's experiments for what they are worth, apologizing in advance in case much of what I say may seem too obvious. I was teaching the usual classical subjects to a fifth and a sixth form.

Greek History was my main chance. Yet, with two or three exceptions, I did not trench on ordinary school time for more than a quarter of an hour at the end of a lesson in any week. My plan was to introduce appropriate objects into the classroom, say nothing about them at first, but leave

them to excite curiosity, invite inspection after class time, and then, when questions began to come in, give a short talk about them. These objects were seldom left more than a week, and nearly every week throughout the year I had something fresh and appropriate to bring in. The general effect was the increased interest and keenness, especially, of course, in that most difficult of lessons, the history lesson—an effect noticed, though their attention was not directly called to the subject, by both Board of Education Inspectors and University Examiners.

My first opportunity was with the Sixth (a class of 17), in dealing with the art of the Periclean age, when Balle's statuary pictures had just come into my hands. On this occasion I boldly took the whole of the two consecutive history periods; introduced the subject by sketching the history of Greek sculpture of the sixth, fifth, and fourth centuries, and then exhibited select photographs arranged under headings, saying a few words about them, and sending them round for closer inspection. A week or two later I found some postcards and photographs in the British Museum, and pinned them up, and recommended purchase.

Shortly after this it happened that most of the Archæological Committee's exhibits for circulation were assembled at Christ's Hospital before they were sent away on rota. I therefore arranged an exhibition in the school library, adding to the collection what I could borrow from various members of the staff, and inviting all and sundry masters and boys to see wall pictures, photos, and coins, and arranging a practical demonstration of coin casting. This aroused much curiosity and interest, and masters resolved that some such pictures, at least, were desirable. Result: the Governors granted £5 for purchase of pictures. Among the models, the catapult, of course, was popular. Result: boys made in manual school a mill, a catapult, a tortoise, &c.—all better things than the originals—at the cost to the school of material only. One boy made me a voluntary offering of a roll of a book, another labelled with Latin and Greek names the various parts of the catapult.

But it happened during the four days while the material stood in the library, that the sixth had to deal with Chapter XXV in Oman's Greek History, the Years of Peace 445-439, in which "Pericles and the Athenian Empire" is the subject. I found I had at hand illustrations of many things: a cast of the inscription of the Erechtheum Commission's Report (the introduction and first few lines of which a few fair attempts had been made to decipher, while it stood as a challenge in classroom), a relief map of Athens and the Peiræus to show the third wall built by Pericles, a picture of the Acropolis, the photographs of Athens and Attica to show the Acropolis, the Odeum, and other buildings mentioned—plaques of the frieze to illustrate the Panathenaic festival; the *ὀβολός* and the *τριῶβολον* from the Greek coins to illustrate state payment, the coins of Thurii to illustrate the colony settled at New Sybaris in 443, and so on. So after the first period in classroom we adjourned to the library, inspected, handled, and talked about these various objects.

In the next chapter (XXVI), 435-432, the outbreak of the Peloponnesian War, with a little harking back to Chapter XXV, I found relevant among the coins the Athenian obol, $\frac{1}{2}$ obol, Aeginetan stater, triobol, and obol, the Corinthian stater and diobol, and coins of Corcyra, Thebes, Euboea, and Amphipolis.

Meanwhile, with the fifth I had reached Livy I, 43, which deals with the organization of the people into classes according to property qualifications. Its opening—"Ex iis qui centum milium aeris aut maiorem censum haberent"—was suggestive, and as Prof. Browne had just kindly presented me with a set of the "Aes Grave" series, I did not hesitate to spend twenty minutes of valuable time in explaining the series, and handing round the very realistic reproductions. At the end of the morning, of course, several stayed for ten minutes to handle them again.

We were now well in the middle of the second term, and the results of these little talks began to show themselves among the keener few, from whom there began to drop in contributions of various sorts; one wanted identified a fragment of old

pottery from a stream near his home, another brought some Persian coins, and others several pictures bearing on class subjects, history, or classical reading. One introduced me to the Greek history pictures in Hutchinson's "History of the World," which were without delay cut out and fixed up to illustrate the chapter being read.

I have not space to detail the other objective devices used for the rest of the year, including a lantern lecture on ancient Greece, the handling of Sicilian coins and Greek pottery, and the use made of the Roman Spectacle at Olympia.

To sum up. The following are generalizations made from my first year's experience, confirmed by that of the subsequent five years:—

1. The interest of pupils and teachers is genuine and beneficial.
2. Much can be done without making any but the slightest inroads on the time of ordinary class work.
3. The objects should be used almost entirely to illustrate the matter in hand, æsthetic values, of course, being noticed; but the pure archæology of the thing should not be emphasized.
4. Objects should not, with rare exceptions—such as pictures of Athens or Rome, or a few objects of marked æsthetic merit—be left permanently in classroom; they should be brought in *ad hoc*, and for short periods.
5. Home-made copies of most things will be made by pupils with the smallest encouragement.
6. The teacher need not be timid: a trained archæologist is not necessary. It is pure pedantry to demand a nice accuracy, which is nothing as compared with the intensified interest and broadening of imagination which follow from the use of tangible and visible illustrations when chosen with ordinary judgment.
7. Schools should aim at acquiring their own material after four or five years' use of the A.A.C. collection.

CORRESPONDENCE.

AN EXPERIMENT IN SELF-GOVERNMENT.

To the Editors of *The Journal of Education and School World*.

DEAR SIRs,—A senior class having been asked what should be the chief aim of education, a happy student said: "to give the scholars a good time and see that they enjoy themselves." It does not take a philosopher to see the inadequacy of such an aim, though one sometimes meets the genial *bonhomme* who would endorse it. Nevertheless, life is not altogether a play-garden. To a certain extent the aim of education must be adjusted to the needs of the age. Benjamin Kidd points out that in progressive civilization the fittest are those who have developed the qualities which make for collective efficiency and co-operation. If we are to develop these in the race and so make the world safe for democracy, it is essential to begin with the young. Thus, the Germans are the most submissive people in Europe, and it is education that has made them so, for absolute monarchy demands passive obedience.

One of the best ways of developing these collective qualities is through self-government in the school. The public-school system of government through the prefects with their "flogging privs." and their fags, is not self-government so much as deputed autocracy. The ideal should be the autonomous school; a fraternity in which the boys work with and not for a prefect or master. It is one of the ironies of fate that it should have been left to a soldier—Sir Robert Baden-Powell—to popularize this idea in the training of boys. In a Scout troop there exists a Court of Honour of the leaders, the latter being in many cases elected by the troop and being responsible for the discipline and training of the boys under their charge. Starting with this idea, the writer has worked out in the course of three years a system of self-government in his school.

A Court of Honour of the prefects was first formed. It met weekly and was given certain deliberative and judicial powers. Each house was represented by the captain—a prefect in every case. Boys were brought before the Court for certain offences, a too frequent appearance in detention being a case in point. The Court would decide the nature of the punishment. Usually a warning was found to be sufficient, but sometimes a boy would be

suspended from his house and so deprived of such privileges as playing in a house match or taking part in a field-day. The results were most satisfactory, especially in reducing the numbers in detention. The prefects were unanimous in their opinion that a boy disliked nothing so much as an appearance before the Court of Honour. For the Court came to represent strongly the public opinion of the school, and the boy can seldom stand up against that.

Then there was the power of the Court to deliberate and to decide many matters of school policy. It arranged matches and drew up all rules for field-days and inter-house competitions. It made the arrangements for camps, and, where Scout funds were concerned, it checked accounts and discussed expenditure. Prizes having been given up on Speech Day, it decided how the prize money was to be spent, and it disbursed concert moneys among the different War charities. A detailed illustration may not be out of place. In 1917 the Court decided to give all the prize subscriptions to War bonds. A lively discussion followed as to the use of the annual interest. Finally the boys decided that half its amount should go to endow a prize for the pluckiest boy in the school, the selection to be by ballot. The girls objected to this arrangement for themselves, and allotted their share of interest to found a prize for the best all-round girl in the school. The scheme was welcomed by the school, and has been a great success. Suggestions were often made by the members of the Court as to the distribution of leisure time between the various scouting activities, games, and War work. But with the actual curriculum of the school the Court had no concern.

Reference must finally be made to the Supreme Court of Honour. This was a court of appeal consisting of the prefects and the members of the staff. A member of the ordinary Court could always move that certain business go before the Supreme Court, and it became customary for important matters to be reserved for the latter.

Having started out with the Court of Honour, there arose the further question of associating the majority of the pupils in the government of the school by means of a vote in the selection of their officers. A plan was devised that set up an elective body known as the League. Members of the League were elected by and included all boys over twelve years of age who had been in the school at least one term. At the first election there were some seventy-five candidates for admission to the League. They also formed the electorate. To enter the League, fifty votes had to be obtained, two-thirds of the possible number. Ballot papers were given out, and scholars put on their honour to vote only for those who were doing their best to raise and maintain the good name of the school. The result was that some 12 per cent. of the candidates were voted out of the League, and, according to the prefects, they were the very pupils who ought to have been so rejected. It will be seen that the League thus fulfils two functions: it gives a measure of self-government to all who in the opinion of their fellows deserve it, and it helps to raise the tone of the school. As regards the latter, pupils on voting were asked to judge of a person's fitness for the League according as he carried out the spirit of Baden-Powell's Scout Law, which has been adopted as the school law.

The system of self-government outlined has been some three years in working itself out, and it has met with a considerable measure of success. It justifies the experience of many years' work with boys—namely, trust them and give them a hand in the framing of policy, and they will justify that trust. Treat them as irresponsible little animals, and they will act as such. Largely owing to the co-operation of the Court of Honour, the school referred to has raised since 1916 almost £800 for War Loan, War Savings, and War Charities, not a small total for a school of just over 100 scholars.

Co-operation is indeed the essence of the system, and the secret of its success. Here are all the qualities that make for collective efficiency. For individually the prefects have not great powers, but as a Court they are all-powerful. Then, too, a prefect must be a member of the League and is elected by the League. He holds his position by the goodwill of its members. And, since all members may have to seek re-election each year, any prefect who lapses from the standard required of him may lose his position and cease to hold office. Leadership not dictatorship, responsibility not privilege—these become his watchwords. The school-master gives in to the natural desire of the boy to form and carry out a policy which is his own. The boy in turn learns not to give in to himself. This is the true discipline, the real "school of learning." Indeed, self-government gives a school in the complete sense of the word, since it educates the whole boy. Here is no mere examination factory with its soulless routine of cramming, but rather a society in which the boy learns self-confidence, self-reliance, and self-discipline. He has opportunities for making decisions and judgments which are his own. He can form and state his opinions. He accustoms himself to do of his own will what

is too often done under compulsion. And, not least of all, he has plenty to do and think about outside his studies and his games. This is true offensive policy on the part of the schoolmaster, for he is not thrown on the defensive as against a boy's capacity for mischief.

The writer would be just neither to his boys nor to himself if he minimized the difficulties of any system of self-government. They are inherent in the nature of the case. To some extent there is a surrender of the head master's powers. Although he or one of his staff always takes the chair at the Court of Honour, his is only a casting vote. Each member of the Supreme Court has only one vote, whether he be master or prefect, and, though the prefects may outnumber the staff, the reverse is never the case. Whatever affairs are left to the decision of the Court, its decision on these is final. The Court of Honour needs careful handling. One must needs ride as if the reins were made of silk and could easily be broken. Sometimes there is no alternative but to allow the Court to persevere in a mistaken policy, and to find out its error by experience. Should the Court tie on a question, it may be good policy for the chair to avoid giving the casting vote, and to let the League vote on and decide the question.

There is also the effect on the relations of the boys and the masters to be considered. As a rule, these relations are improved. Though more intimate than is customary, they are equally respectful. The boy's sense of honour prevents him from taking advantage of the liberty allowed him. There will always be exceptions to this rule. Occasionally a prefect can become too big for his shoes and require a new size in hats. Such bumptiousness is a passing phase, and the true educator, under the inspiration of his calling, will never deny that "to do the things that cannot be done is the glory of life."

HEAD MASTER.

RECONSTRUCTION IN MUSIC.

To the Editors of the *Journal of Education and School World*.

DEAR SIRs,—My attention has just been drawn to your note in the September issue, page 577, on "The Teaching of Music in Schools," in which you refer to a letter recently addressed by the Directors of Music in Secondary Schools to the head masters of all the preparatory schools in the Kingdom. I have also seen the letter itself, and I hope you will allow me to make a few observations on it, as the subject is one to which I have given the greatest attention for many years, and is, I believe, of extreme importance for the future, particularly owing to the fact that music is constantly getting more and more complicated from the point of view of notation.

I hope that many of the head masters who have read the letter of the Directors will also read these remarks.

The gist of the letter in question is that the Directors of Music in Secondary Schools state that the boys who come up to them from the preparatory schools are, if singers, "quite unable to sing a simple melody at sight, far less to sing at sight a second treble or alto part." If they are players, they are without any idea of reading music, but say frankly "we never could read."

These being the facts, the Directors find themselves on the horns of this interesting dilemma: either (a) the notation is so difficult that it really cannot be taught to the boys, so as to enable them to master it (or presumably to girls either), or (b) the teachers in the preparatory schools are incompetent.

Now, the fact that the notation is so difficult that only a very small proportion of pianists can play their music at sight is a mere truism, well known to all interested in music. Those who can do so belong to one or other of two classes: those (a strictly limited few) who have a natural talent for the subject, and practically have never wanted anyone to teach them, and those who have devoted a great deal of time to music, have studied it thoroughly, and become really proficient in musical theory. Great numbers of the students turned out year after year by the great schools and colleges of music are very bad readers.

As long ago as 1905 Sir Frederick Bridge told the Incorporated Society of Musicians (the most professional of all the musical societies) that "the inability to read was deplorable and general, and that the examiners did not dare to give the young players anything like a difficult piece of music to read, although they could play sonatas by Beethoven, suites by Bach, and so on, with the greatest fluency."

Some years ago also (June, 1908), there appeared in *The Journal of Education* an article by Dr. A. Somervell, the Government Inspector of Music, in which he said practically the same things about girls' schools as the Directors now say about boys', but he included the senior as well as the junior pupils in his denunciation.

It is no concern of mine to defend the junior music teachers, who will probably reply to their seniors with a vigorous *tu*

quoque, calling upon them to demonstrate to what extent they themselves produce better results. The real blame lies with the antiquated, erroneous, complicated, mystifying, irritating, brain-fagging notation, which took its origin in the darkest of the dark ages and has been patched up and patched up during the intervening centuries till now it is a confused mass of varying staves and ledger lines, sharps, flats, naturals, double sharps, double flats, and enharmonic changes, which is the greatest of all obstacles to the progress and enjoyment of music. The perfectly accurate and simple "Note for Note" system of music is waiting, ready to take its place. It would save nine-tenths of the time now spent in learning music, it would enable countless numbers of music-lovers who are now shut out from the practice of the art to play for themselves.

The "Note for Note" system is simply the application to the notation and theory of music of the principle of equal temperament, which was practically brought into use for the sounds of music by Bach, and of which it is said in Grove's Dictionary of music and musicians, "this principle was known to the Greeks, but its modern revival, which dates from about the sixteenth century, has been one of the happiest and most ingenious simplifications ever known in the history of music, and has had the effect of advancing the art to an incalculable extent." There is every reason to anticipate that the reconstruction of the notation and theory on this same principle would still further "advance the art to an incalculable extent." It would also result in an enormous saving of time.

Let me beg the head masters to investigate this system, and, instead of trying to *make* the junior teachers *make* the boys and girls learn the present impossible system, which they certainly will not be able to do, let them insist on the musicians reconstructing their defective system in the light of twentieth-century science. The directors of music will have then no further reason to complain that the boys and girls can neither sing nor play at sight.

In conclusion may I remind your readers that a review of the "Note for Note" System appeared in your Journal in September 1918.—Yours faithfully,

WALTER H. THELWALL.

3 Earl's Court Square, S.W.5.

THE SECONDARY SCHOOL TEACHERS WAR RELIEF FUND.

To the Editors of *The Journal of Education and School World*.

SIRs,—The Committee of Management of the Secondary School Teachers War Relief Fund desire to make a final appeal for funds with a view to closing the subscription list in December, 1919. While expressing our sincere thanks for the support so generously accorded in the past, we have to point out that the response to the appeal made in May last has not fully met the existing liabilities of the Fund. Actuarial investigation has shown that, if our annual commitment based on life expectations on annuity principle is to be maintained, a further capital sum of £500 must be provided. We feel that all subscribers will realize the obligation laid upon us of continuing allowances to the families of those of the profession who have fallen in the war, so that a reasonable livelihood is assured.

We therefore urgently appeal to all interested in Secondary Education to assist to the utmost of their power in raising this sum before December 31 next.

Subscriptions and donations may be sent to any of the Associations represented on the Committee of Management, or to any of the local honorary collectors, appointed by the fifty branches of the Incorporated Association of Assistant Masters. When this is not possible, contributions should be sent to the Hon. Treasurer of the Fund, Mr. J. Hart-Smith, c/o Barclay's Bank, Ltd., 835 Wandsworth Road, S.W.8, London. Cheques should be made payable to the Secondary School Teachers War Relief Fund, and crossed "A/c Payee only."

35 John Street, London, W.C.1.

A. A. SOMERVILLE,
G. D. DUNKERLEY, Hon. Secretary,
J. HART-SMITH.

SCHOOL TEACHERS' SUPERANNUATION ACT.

To the Editors of *The Journal of Education and School World*.

DEAR SIRs,—In view of the possibility of some amendment of the School Teachers' (Superannuation) Act, may we venture to draw your attention to one or two points on which further legislation would appear desirable?

First, it must be noted that as the Act stands at present the interests of schools are likely to suffer somewhat seriously from the necessity of keeping on elderly teachers at the maximum salary.

Many assistant mistresses of fifty and over are still capable of doing excellent work, and would, if it did not affect their pension, be willing to accept a slightly lower salary if they were relieved from some supervision duties, obtaining in consequence more leisure. Such an arrangement would frequently conduce to the harmony of the school; we would suggest that if the pension of the teacher could be calculated on any five years of continuous service, instead of the last five years, it would be a great improvement.

Secondly, we think that, in the interests of education, some means should be found whereby teachers may be enabled to pass from one type of school to another without loss of pension. At present, service in private schools, denominational secondary schools, public schools rich enough to support a pension scheme, and all schools outside England and Wales, is definitely excluded from recognized service, and the teacher who accepts service in these schools receives, in consequence, a smaller pension; yet there is no doubt that such experience, provided it is in good schools, makes a wider-minded and more efficient teacher.

Thirdly, we would suggest that, in view of the difference between the scales of salaries under different Education Authorities, the pension should not be entirely proportionate to the annual salary.—We are, yours faithfully,

E. STRUDWICK,

Chairman of Pensions Sub-Committee.

G. BRACKEN, K. H. COWARD, M. B. CURRAN,

M. C. FOLEY, L. A. QUARTLY, D. SANDFORD,

of the Association of University
Women Teachers.

AN IMPROVISED TAP.

To the Editors of *The Journal of Education and School World*.

SIRS,—The following may be of some little interest to teachers of science. In certain experiments where an aspirator is essential, a glass tap is not always available. The usual substitute is a screw-clip, but this type does not always form a part of the equipment of a laboratory. In such cases, and where water is to be delivered slowly and steadily from the aspirator, a satisfactory plan is to place an ordinary clip on the rubber tubing, and then fasten the clamp from a retort-stand on to the clip, adjusting it until the desired result is obtained.—I am, yours, &c.,

High School,
Kirkcaldy, N.B.

NORMAN M. JOHNSON.

October 31, 1919.

FOREIGN AND DOMINION NOTES.

FRANCE.

M. Artaud, President of the Chamber of Commerce at Marseilles, has been telling his fellow-citizens that the greatest danger hanging over France is a diminution of the will to work. "If we do not change," he said, "we shall perish of hunger, with our pockets full of paper money." Making the preliminary remark that the salaries of French teachers are paid in paper, we glance at the definitive table of payments now published. Primary teachers, *men and women alike*, of the sixth, or lowest class, are to receive 4,000 francs a year; of the first class, 6,500 francs (the increase at each promotion to a higher class being 500 francs); whilst a *classe exceptionnelle*, or special class, will get 7,000 francs. In the higher primary schools the salaries range from 6,250 francs in the sixth class to 10,750 in the *classe exceptionnelle*; in normal schools from 6,500 francs to 11,000, with higher rates in the Departments Seine and Seine-et-Oise. Head masters receive each the salary of his class with a (not large) supplement, dependent, in the ordinary primary schools, on the number of forms in the school controlled. A great disparity between the remuneration of a head and the remuneration of an assistant master is unusual in France.

Salary is not the whole of life. Joy in work counts for much, and the will to work should be encouraged. Amid much clamour against competition in the expenditure of energy, the French regulations uphold the rights of individual effort. How is promotion got? The minimum period of stay in a salary class is three years; promotion by seniority takes place after five years. But 30 per cent. of the teachers who have passed the minimum stage and have not reached the maximum of five years are promoted by selection. Advancement to the *classe exceptionnelle* is always for the chosen.

The larger salaries assigned to the higher primary schools are designed as an inducement to the lower teachers to equip themselves for office in those schools. Even the inspectorate, with a salary for the *classe exceptionnelle* of 17,000 francs in Seine, 13,000 francs in other departments, is open to the primary teacher who has possessed himself of the necessary qualifications. Scholastic successes and University degrees, a professorship in an *école normale*, the *agrégation*, the *doctorat*—they are titles to an augmented stipend for the inspector. France, in fine, recognizes the fact that the teacher must not only be fed, but also stimulated to purposeful endeavour, in which matter other lands would wisely follow her example.

The French primary teachers, it is announced, have decided, wisely or unwisely, to transform their Amicales, or associations, into *syndicats*, or trade unions, which will join the *Confédération générale du travail*, or Labour League. The trade union and the strike would be more justly estimated if women were taught to view them with larger understanding. A French Catholic society grants a *diplôme d'enseignement ménager*, at the last examination for which the girls were required to write papers on social economy, the programme of matters being this:—"The trade union. What is a trade union? What is its essential aim? What do you understand by trade interests? Are they really promoted by an undetermined demand for a raising of wages? When is such a demand proper? In what cases may the right to strike legitimately be exercised? Explain how a trade union can be a means to mutual understanding and social peace." It would be a gain if the woman learned to regard the strike as something affecting not only her own flour bin and lard pots, but also society in general. The new rôle assigned to women in the State requires for social economy an important place in the education of girls.

France has not yet an obligatory continuation law; but there has lately been promulgated an important "Loi relative à l'organisation de l'enseignement technique, industriel et commercial" (*Text in Bulletin de la Société générale d'Education*, L. 3).

This French law recognizes both public and private schools and courses of technical, industrial, and commercial instruction. But the private schools are governed by a special Section of the law. Any person who wishes to open a private technical school must declare his intention and designate its locality to the *maire* of the commune in which it is to be opened. The particulars that he furnishes will be placarded for a month on the door of the *mairie*. The *maire* may oppose the scheme on some ground of morals or hygiene. The applicant must submit the same particulars to the Prefect, the *procureur de la République* and the Minister of Commerce and Industry, together with a certificate of birth, diplomas, and judicial record. If no opposition is raised by these authorities the school may be opened after a lapse of two months. The applicant must have qualifications strictly determined. Any one who opens a school without fulfilling all the legal requirements becomes liable to a fine of from 100 to 1,000 francs, and his school will be closed. Private technical schools are to be inspected by inspectors approved by the Minister of Commerce and Industry; if legally opened and properly conducted they may be "recognized" by the State. In brief, France requires that private technical schools shall be conducted by fit persons, in fit places, and under adequate public control.

You will find in the end that bonds of sentiment and exchanged culture are more than paper covenants. France knows this. She is sending professors to Bohemia and to Greece. She has signed a *convention universitaire* with Rumania, and is preparing a like agreement with the Swiss Universities. With America her relations grow continually more intimate. Last year 114 French girls and 36 invalided French soldiers were passed over to American colleges and Universities by the American Association of Colleges. Now there is news of twenty scholarships founded in French *lycées* and *collèges* for American girls, who will return to teach French in American schools. The French Universities (Strasbourg, in particular; cf. *Education*, ii, 1) are desirous of attracting the foreign students who formerly sought light in Germany. To promote this object the Society for American Fellowships offers twenty-five "fellowships," of the annual value of 1,000 dollars for two years, for American students proceeding to France. The aim of the society is "to assist in establishing the standing and repute of French scholarship in its proper place of eminence in the mind of the American public." Events have driven French culture forward and German back; yet there will be room for both when Germany has rehabilitated herself in the esteem of mankind. Meanwhile, French spirit, the French language, and French literature are being widely diffused, notably by means of *Instituts*:

français. The University of Grenoble has charge of such establishments in Italy; to the University of Lyon is entrusted the *Instituts français* of Tokyo, and will be entrusted that to be founded at Pekin; Bordeaux and Toulouse have their offshoots in Spain. There is talk of French *lycées* to be established not only in Spain (as we have reported), but also at Warsaw and Bucharest, in Brazil, the Argentine, and even in Persia. And in all this there is nothing resembling the cancer of *Alldeuschtum*. It is a linking up of friendly nations—an effort to write "*Liberté, égalité, fraternité*" over all the world.

GERMANY.

We wish we could report that Germany shows signs of penitence, but we cannot. The general tone is of injured innocence, and what we call reparation the Germans call the payment of an unjust debt, the hate officially disclaimed ranking in secret. The German will, they say, must be educated, the national sentiment maintained in the severed regions, the German language kept pure—Weimar is reproached with its *Gendärmeriekommissar*, for which the German would be *Oberwachtmeister*—and the writing of it simplified. About religious instruction there is still keen conflict. The New Constitution, repudiating a State Church, allows three kinds of school—the denominational, the mixed, and the purely secular; and parents have the right of determining locally the kind of school that they desire for their children. On the other hand, the Socialists still press for the general introduction of the secular school. There is a superfluity of primary teachers, and men and women are warned not to crowd to the school for a living. Women, especially war widows and orphans, find employment on the land, and a Gotha firm publishes a special series of "*Landfrauenbücher*" for their guidance. In the field of higher education there is activity; for at least the German intellect must retain its influence. A new foundation is the Schleiermacher Hochschule at Berlin, to which all adults are welcomed, and in which men like Prof. Harnack and Prof. Richter examine the questions of the day in the light of a liberalized Christianity. Again a Martin-Luther-Volkshochschule was to be opened, also at Berlin, on October 31, to promote "the inward upbuilding of the German people in the spirit of Martin Luther." A decree of the Prussian Ministerium für Wissenschaft, Kunst und Volksbildung admits to the Universities primary teachers, men and women alike, who have passed a training college examination (*Seminar-Abschlussprüfung*) and served two years in a school. The Oriental Seminary in the German capital offers popular courses in the Russian, Polish, Turkish, or Bulgarian language to the aliens stranded there, the fee being 10 marks a course; whereas ladies' stockings are advertised at from 6.50 to 16.50 marks a pair in Chemnitz, where they are made. Learning is cheaper in Germany than underclothing.

MEXICO.

Culture and education in Mexico are not at a high stage; indeed, malice relates that the trains have to travel with closed windows in order to keep out the bullets of banditti. We note briefly some slight signs of progress. The Government is preparing films illustrating the social and industrial life of the Mexicans, for the education of the people and the enlightenment of foreigners. The library of the Department of Agriculture in Mexico City is handsome and well equipped; a public reading room has also been opened in connexion with the Department of Industry and Commerce. The Ayuntamiento, or authorities, of that city have approved a project for the immediate establishment of two open-air schools in the outskirts, and it is hoped that others will be added soon. To improve relations with the United States, exchanges between the National University of Mexico and American colleges are proposed. The Rector of the University of Michoacan at Morelia has accompanied the Mexican Ambassador (Bonillas) to Washington for the purpose of studying American methods in higher education. "*Los lazos culturales y educativos son los más fuertes*" (no ties so strong as those of culture and education), said that ambassador lately; and for the ties which he desires to join between the United States and Mexico we wish strength and permanence.

CAPE OF GOOD HOPE.

We have hesitated to report from the United States dissuasions against the closing of schools during epidemic influenza. The Cape of Good Hope *Education Gazette* (xix, 2), seems to be, however, on the same side. Anticipating not another great out-

break, but milder and smaller waves of the disorder, it writes:—"To close schools in order to limit or prevent the spread of such smaller waves of the disease is not only futile, but tends rather to promote the outbreak by dispersing carrier cases and by withdrawing all supervision from school-going children. This is even more probable if churches, Sunday schools, bioscopes, and, in fact, all places where children congregate, are allowed to remain open. The only way in which school closure can succeed as a preventive measure is by limiting the contact of children who live far apart and who are brought together, from different areas widely separated from each other, at a common centre; it is, therefore, only in small country schools that closure as a feasible preventive measure need be discussed. In town schools closure is useless, a waste of money and of educational facilities, an interruption of the normal routine of the child's life, and a sure means of engendering panic among the public and promoting a scare. Unless all places of public entertainment are closed at the same time, and the children of school-going age kept rigidly isolated at home—a policy which it is almost impossible to enforce in large towns—school closure by itself will not succeed in stamping out the outbreak or in preventing its extension in the district where such closure has been enforced." We incline to think that no general rule can be laid down; but that the decision as to the closing of a school should be based on the opinion of the medical authority in each separate case.

It will surprise Berlin. The Report of the Superintendent-General for the year 1918 shows that during the war the number of schools for Europeans in the Cape Province rose from 2,266 to 2,840, whilst the enrolment improved and the average attendance of pupils was very satisfactory—93.5 per cent. in secondary schools and 91.2 in primary. Thus German intrigue and domestic rebellion dealt no grave wound to education. The School Board Act of 1905 exempted from school attendance children who had passed Standard IV; the time is ripe, says the Superintendent-General, for raising the limit to Standard VI. The method of inspecting schools will soon be radically changed. It has been laid down in the recently issued primary school curriculum that individual examination, except in small schools or where several classes are grouped under one teacher, is to be replaced by class inspection if, "by means of a continuous record of good work and other trustworthy evidence of efficiency," the inspector is satisfied that the school is well conducted. Again, the Cape manifests no love of external examinations, being minded to leave examination to the school authorities. By whomsoever the children are inspected or examined, the Cape Education Department would have them, above all, healthy, and the year 1918 saw the commencement of medical inspection in the schools. In the domain of secondary education, a certain elasticity is aimed at—different schools to offer different courses according to local requirements. The Report indicates as of central importance in education religious and moral instruction, with lessons on the duties of citizenship. It disparages the long study of Greek and Latin, and to do so seems to be the tendency in all the Dominions. Rightly or wrongly, they regard *Classicism as hereditas damnosa*.

The provision of a sufficient number of teachers has been a constant source of anxiety in the Province. The difficulty as to quantity has been overcome by systematic organization; the quality of the teaching body is still capable of improvement. Unilingual teachers are being helped to obtain a bilingual certificate. In Europe, primary teachers are seeking access to the University; the Cape Superintendent-General writes: "It is very strongly felt that the Universities should devote their time and attention to the training of higher grade teachers, and should leave the training of elementary or primary teachers to the Departments in charge of education other than higher." We make no comment. It is the essence and the glory of our imperial citizenship that social and educational problems are solved locally.

RHODESIA AND THE OVERSEA TEACHERS' MEMORIAL.—The League of the Empire has received a grant of £500 from the Government of Rhodesia towards the inauguration of a headquarters in London for oversea teachers coming to this country for educational experience or for study. The building is, it will be remembered, to be erected in commemoration of the teachers' services in the war. Subscriptions may be sent to Sir Philip Hutchins, K.C.S.I., Office of the League of the Empire, 48 Catherine Street, Buckingham Gate, S.W.1.

DEMONSTRATIONS HAVE BEEN GIVEN BEFORE NEARLY 100
ASTRONOMICAL-EDUCATIONAL & SCIENTIFIC SOCIETIES.

The NEW ASTRONOMICAL MODEL

*Specially Designed
for use in
Schools & Colleges.*

INVENTOR, PATENTEE & SOLE PROPRIETOR
WILLIAM WILSON, M.B. CM. FRAS

EDUCATIONAL CAPABILITIES OF THE MODEL.

THE MOTIONS OF THE HEAVENLY BODIES REPRODUCED BY THE MODEL.

THE EARTH.—Yearly revolution round the Sun—Diurnal rotation on its axis—Inclination of the Earth's Axis ($66\frac{1}{2}^\circ$ to the Ecliptic)—Constant direction of the inclined axis to one point in the heavens, the Pole Star.

THE MOON.—Monthly revolution round the Earth—(Calendar, Synodic, and Sidereal Months)—Monthly rotation on its axis—Moon's orbital plane oblique to the Ecliptic—Moon's constant presentation of the same side to the Earth—Moon's shadowed side necessarily away from the Sun—Moon's shadow cast into space and under certain conditions travelling across the Earth's surface.

MOON'S ORBIT.—Retrograde revolution of the Moon's Nodes, completing one Sidereal revolution in 18 years 219 days and one Synodic revolution in 346 days—The forward revolution of the Moon's Apes completing one Sidereal revolution in 8 years 310 days, and one Synodic revolution in 412 days.

THE SUN.—Rotation of the Sun on its axis once in 26 days—The inclination of the axis—The constant direction of the axis to one point in the heavens.

NATURAL PHENOMENA CAPABLE OF DEMONSTRATION BY THE MODEL.

The Year (Solar and Lunar)—The Month (Calendar, Synodic, and Sidereal)—The Day—Alternation of Day and Night*—The Succession of the Seasons (Solstices and Equinoxes)—The Phases of the Moon—Eclipses (Solar and Lunar, Total, Partial and Annular)—The Solar and Lunar Eclipse Limits (Major and Minor)—The limitation of Eclipses to definite periods of the year—The variation in position of these periods from year to year—The maximum and minimum number of Eclipses possible in any one year—The "Saros" or Chaldean Cycle of 18 years and 11 days, comprising 70 Eclipses, after which Eclipses repeat themselves in the same order and at the same intervals—The Metonic Cycle—The Midsummer 24-hour day within the Arctic Circle—The Midwinter 24-hour night within the Arctic Circle—The Harvest Moon—The Hunters' Moon—"The Old Moon in the New Moon's Arms," &c., &c.

* The varying lengths of day and night throughout the year.

The accuracy in the time relations of Earth, Moon, Nodes, and Apes is shown by the fact that—

THE MODEL IS CAPABLE of predicting for at least twenty years to come the solar and lunar eclipses and of differentiating these into total, partial, and annular.

THE SIZE OF THE MODEL can easily be judged from the illustration when it is stated that the Cloth Dial underlying the Model is 3 ft. 6 ins. in diameter. This large size of the Model renders the various movements and phenomena easily visible to a large audience, and yet, when not in use, the model can easily stand in any ordinary bookcase or cabinet from which two shelves have been removed, as the space required from back to front is only 10 ins.

DEMONSTRATIONS have been given in response to invitations, before nearly 100 Astronomical, Educational, and Scientific Societies, including:—

Royal Society.
Royal Institution.
Royal Observatory, Greenwich.
Royal Society of Edinburgh.
Royal Astronomical Society.
British Astronomical Association.
British Association.
Universities.

Training Colleges.
Technical Colleges.
L.C.C. Education Committee.
Head Masters' Conference.
Science Masters' Association.
Geographical Association.
Education Authorities.

And many Public, Secondary, and Elementary Schools.

LETTERS OF APPRECIATION have been received from a great many leading Astronomers and Educationists who have seen the model demonstrated, the former including Sir Frank Watson Dyson, Astronomer Royal, Royal Observatory, Greenwich, and the Directors of the University Observatories respectively of Oxford and Cambridge; the latter including Sir Oliver Lodge and Principals, Professors, Head Masters, Geography Masters, and Science Masters of Universities, Training Colleges, and Public Schools, and Inspectors of Education. 20 of these letters of appreciation will be found in the pamphlet mentioned below.

Alexander Morgan, Esq., M.A., D.Sc., F.R.S.E.,

Principal, Provincial Training College, Edinburgh.

The members of our Staff and the Students of the College were immensely impressed by the demonstration you gave of your New Astronomical Model. We were particularly struck by the completeness of the model. There is hardly an Astronomical phenomenon that cannot be demonstrated by means of it. The movements are shown with an accuracy which is not approached by any one of the many models I have seen. The beautifully simple contrivances by which the various motions are produced are, in my opinion, a triumph of mechanical genius. Some of our lecturers have been trying to demonstrate the same phenomena for years, and they are loudest in their praise of the marvellous simplicity and completeness of your model. If it can be placed on the market at a price within the reach of Educational Authorities I think it ought to form part of the equipment of every Secondary School and of many Colleges in which the motions of the Sun, Moon, and Earth are taught.

ORDERS HAVE BEEN RECEIVED from University Professors of Astronomy, Training and Technical Colleges, London County Council Education Committee and other Educational Authorities, Public Schools, as well as from many private individuals for presentation to schools in which they are interested.

For full particulars see the 16-page Illustrated Pamphlet, post free 6d., obtainable from—

Dr. WILLIAM WILSON,
43 Fellows Road, London, N.W.3.

For forthcoming Demonstrations of the Model see page 818.

UNIVERSITIES AND SCHOOLS.

OXFORD.

The Ministry of Labour have an office at Oxford, whose function is to assist ex-Army officers in obtaining suitable employment. The University Appointments Board have for some years been engaged in placing graduates in posts of all descriptions—scholastic and otherwise. They have, for instance, acted as Government agents in choosing men for Civil Service appointments in Egypt and the Sudan. Their chief drawback, which has prevented them from extending their activities, has been a lack of funds, their income being round about £500 a year. As their Secretary, Mr. Waterfield, has just retired, it has been suggested that the present would be a suitable time to combine the two offices under conditions which would permit of an extensive development of appointments work in connexion with the University.

It had been proposed that the University should go to Parliament to seek powers to enable them to grant degrees to women. The Sex Disqualification Act will obviate any need for this.

The position so far as compulsory Greek is concerned is, at the time of writing, still obscure. Congregation is asked to accept the again introduced Responsions Statute which contains provisions permitting amendments. Of these, two seem likely to be seriously discussed—one, urged by Prof. Gilbert Murray, that there should be exemption from Greek for passmen and those taking honours in science and mathematics; the other, a partial abandonment of the compulsory Greek position by the dividing of the subject into four compartments, two only needing to be taken, and one of these consisting of the study of a Greek book in an English translation. Compromise is in the air. Delay is to be deprecated, for at present the teacher does not know definitely what to work for.

CAMBRIDGE.

The report of the Previous Examination Syndicate to the Senate is of interest to teachers in secondary schools, since it means an approach, however modest, to uniformity in examinations; it brings the Previous more nearly into line with School Certificate Examinations. Its chief features are: that Part II shall contain only three papers, two in mathematics and one in natural science,

each of the mathematical papers containing questions on arithmetic, algebra, and geometry, one paper being more elementary than the other, and the present science syllabus being slightly altered; and that a candidate who has obtained a school certificate from a University Examining Body approved by the Board of Education shall be exempted from Part II if he has passed with credit in elementary or higher mathematics, or in physics and chemistry, or in either of these. It must be noted that the report recommends that these alterations shall not come into force until after January 1, 1921.

The Royal Commission to inquire into the application of these Universities for assistance from the State has been appointed, and its terms of reference include an inquiry into the resources of the Universities themselves, and of their colleges and halls, and into the administration of those resources. The Committee will also consider the general government of the Universities and the inter-relationships of the colleges and halls with each other and with their parent Universities. The Chairman is Mr. Asquith, and that the Commission is strong its personnel very clearly shows. The Commission is a unit, but its parts may sit as three separate committees. Chairman of Commission: Mr. H. H. Asquith. Oxford Committee: Mr. Asquith (Chairman), Lord Chalmers, Sir John A. Simon, the Very Rev. T. B. Strong, Sir H. A. Miers, Prof. W. H. Bragg, Prof. W. G. S. Adams, Miss Emily Penrose, and Mr. Albert Mansbridge. Cambridge Committee: Mr. G. W. Balfour (Chairman), Mr. Arthur Henderson, M.P., Sir W. M. Fletcher, Sir Horace Darwin, Mr. G. M. Trevelyan, Dr. H. F. Anderson, Miss B. A. Clough, Dr. M. R. James, and Prof. A. Schuster. Committee on Estates Management: Lord Ernle (Chairman), The Hon. Edward Strutt, Sir H. Frank, Sir J. H. Oakley, and Mr. H. M. Cobb.

WALES.

At a Council meeting, held at Aberystwyth, on November 10, Mr. J. H. Davies was appointed Principal in succession to the late Mr. T. F. Roberts. The question of the principalship had been discussed very widely, and the merits of the three selected candidates had been much canvassed. This is partly due to the hold which Aberystwyth, as the oldest of the three Welsh colleges, has

THE PROGRESSIVE FRENCH GRAMMAR.

By Dr. F. A. HEDGCOCK.

A New French Grammar by a well-known authority on the language. The method is a combination of the direct with the indirect, and in order to give teachers an idea of the style of the book 16 specimen pages will be sent for inspection to all interested. Complete book, 5s. 6d. net. Also in two vols.: Part I, 3s. 6d. net; Part II, 2s. 6d. net. Key, 3s. 6d. net.

FRENCH FOUNDATION BOOK OF VERBS, ACCIDENCE, AND SYNTAX.

By the same Author. In crown 8vo, 91 pp., 1s. net.

THE ELEMENTS OF BOOK-KEEPING.

By W. O. BUXTON, A.C.A. (Hons.).

A book for beginners—fully explanatory. Cloth, 1s. 6d. net.

PITMAN'S SHORTHAND RAPID COURSE.

The latest text-book of the world's best system. Gives the theory in 20 simple lessons. Cloth, 2s. 6d.; or with additional exercises, 4/-.

HEAT, LIGHT, AND SOUND.

By J. R. ASHWORTH, D.Sc.

An introductory course of practical exercises. With numerous Illustrations. 2s. 6d. net.

EMBROIDERY AND DESIGN.

By JOAN H. DREW.

This book arouses new interest in the subject. Many illustrations are given, and the designs are the right size for tracing and working. Cloth, with 82 Illustrations. 3s. net.

DRAWING AND DESIGN.

By SAMUEL CLEGG.

A school course in Composition. Lettering and pen and ink drawing are included, and a special feature of the book is coloured plates printed by scholars from wood-blocks of their own making and designing. Profusely illustrated. 10s. 6d. net.

THE WANTS OF MAN.

By T. H. BOWTELL, M.A., B.Sc., M.Ed.

A simple introduction to the problems of Economic Science. Cloth, 210 pp. 2s. 6d. net.

THE TRIUMPH OF MAN.

With 130 Illustrations. A reading book for boys and girls from 12 to 16 years old. Contains a simple account of wind, water, steam, and electricity and their applications; of iron and steel and their uses, &c. 2s. net.

The First Really New Atlas for
FIFTY YEARS.

The Times
SURVEY ATLAS of the WORLD

With a completely original

GENERAL INDEX

*of over 200,000 names arranged so as to render
reference to the Maps quick, easy, and certain.*

Prepared at the Edinburgh Geographical Institute under the Direction of
Dr. J. G. Bartholomew, LL.D., F.R.S.E., F.R.G.S., Cartographer to the
King, and Victoria Gold Medallist of the Royal Geographical Society.

Dedicated by permission to His Majesty the King.

The 112 entirely new Plates engraved specially, at immense cost, for this
Work, provides a series of superb and authentic Maps which incorporate
not only the latest National Surveys of all Countries, but also the results
of the Special Surveys and Researches of Travellers, Exploring Expeditions,
&c. The Territorial Re-distributions ordained by the Peace Conference are
also clearly shown in great detail. These features together with the unique
system of Orographical Colouring employed throughout the work, render
this Atlas the most modern, clear, accurate and complete hitherto published
in any country, and ensure its place, for at least a generation to come, as
THE STANDARD REFERENCE ATLAS OF THE WORLD.

In 37 Fortnightly Parts
at 2/6 each.

Part 1 on January 9th next

always had on the imagination of the Welsh people, as well as to the importance of a right selection to the post at this critical juncture in University development in Wales. Mr. J. H. Davies will be able to bring to bear upon his work a wide experience of the working of the Welsh educational system. The new Principal is well acquainted with our intermediate school system, as he has been a prominent member of the Executive Committee of the Central Welsh Board for some years, and his knowledge of secondary education has been recognized by his appointment to the Committee which is now inquiring into the effect of the new Act in Wales.

The half-yearly meeting of this Association was held at Shrewsbury on October 31 and November 1. The most important question discussed was the policy which the Association should advocate before the Departmental Committee on Secondary Education, and, after a long debate, something like unanimity was reached on most of the points submitted to the consideration of the Association by its Executive Committee. The Association is naturally anxious to preserve our present autonomy in educational matters, as it is convinced that, if it is impaired in any way, the schools will lose in efficiency and Wales will not retain its interest in the development of education. The problem with which the country, however, is at present confronted is awkward, and its solution is far from being clear, for it is uncertain how far the Fisher Act affects the Welsh Intermediate Education Act of 1889. As yet there has been no pronouncement on this question. Further, under the recent Act the power of combination among counties is limited, and therefore it is difficult to see how it will be possible, without special legislation, for the Central Welsh Board to come within its four corners. But if, by the operation of the Act, the Central Welsh Board is abolished and it also becomes impossible to create another body with somewhat similar powers of control over secondary education, then it is certain that Wales will be perturbed and disappointed. Of course we may be told that we have only to wait for a duly developed scheme of devolution before we can re-establish our local control over education; but, as it may be many years before this is in operation, Wales is anxious to know what is to happen in the meantime. The Association of Head Masters and Head Mistresses, any way, felt strongly that the present distinctive features of our secondary system should not be interfered with, even temporarily.

Welsh County Schools Association.

as it would be a serious setback to the country to lose its present autonomy. It was also unanimously agreed that every effort should be made to retain the presence of teachers on the Central Authority, whatever its future constitution may be, and resolutions were passed bearing upon the functions of Education Committees and Local Governing Bodies, and the relationships of different types of schools. The President (Mr. Lyon), the Honorary Secretary (Mr. D. E. Williams), Mr. Prytherch (Penygroes), and Miss Collin (Cardiff), were selected to prepare evidence on behalf of the Association before the Commission.

At one of the Sessions, Prof. Walford Davies gave a delightful and stimulating address on Music, which was much appreciated. At its close, questions were asked, and difficulties in connexion with the formation of school choirs and the teaching of music generally in schools were discussed. It was ascertained that the Council of Music, in order to help in the solution of these problems, is preparing a series of primers, which should be most useful; and other measures are contemplated by Prof. Davies towards the improvement of music, both in schools and in the country as a whole. At the University College, for instance, a series of educative orchestral festivals have been started. The London Symphony Orchestra and the Hallé Orchestra have been engaged for some of these concerts; and it is further proposed by the Council of Music to arrange for similar treats at the other constituent colleges.

The first of a series of conferences for the discussion of the questions submitted by the Departmental Committee on Secondary Education was held at Cardiff Technical College, on November 14.

An Education Conference.

Sir Isambard Owen dealt with the question of the formation of the best system of inspection for all secondary schools and the relation of this system to the State, the Central Welsh Board, the University, and the private schools. The question of the co-ordination of the different types of schools and public institutions was treated from various standpoints by Mr. Rhys Morgan, Principal Trow, Mr. D. Lleufer Thomas, and Mr. Ingledew. Other problems, such as the curriculum, further provision of facilities for secondary education, the position of the Welsh language, and scholarships, were also discussed. The deliberations of the Conference must inevitably affect the future of Welsh education seriously, and they will, no doubt, be of value to the Commission.

sioners in arriving at their conclusion. A similar Conference will be held in Swansea at the beginning of January.

The agitation for increase of salaries has not yet subsided, in spite of the increases which have been granted. It is evident that so long as the present diversity of scales exists in the different counties, there will be unrest among a section of teachers. For example, the Carmarthenshire teachers complain that they are paid worse than in the neighbouring county of Glamorgan, and a request has been sent to the Education Committee for the adoption of the more generous scale given in Glamorgan, but, so far, this has not been granted. Even in Glamorgan there has been a demand from the assistant masters and mistresses for an increase in the maximum up to £500 instead of £450, but this has been refused. Cardiff and Cardiganshire are also faced with the salary difficulty. It would therefore seem to be essential that some more efficient method of dealing with this problem should be substituted for the present haphazard system. Most probably the best solution is the adoption of a national scale throughout the whole of Wales, and this seems to be the plan most generally approved by the teachers.

SCOTLAND.

The numerous changes which have taken place in the higher educational posts in Scotland during the present year are reflected in the composition of the new Executive Committee of the Educational Institute. Last year's Executive was sometimes criticized on the ground that it was "too old." This year's Executive is at the other extreme: it is doubtful whether it is old enough. Men of weight like Prof. Strong, Dr. Morgan, Dr. Third, and Mr. MacCallum, are no longer in its membership, and their places have been taken by less experienced men. The alteration in personnel, however, is not without its advantages. Last year there were three women teachers and three men class teachers on the Executive: this year there are five women and six men class teachers. The result is that, for the first time in its history, the business of the Institute will be conducted by a body on which head masters are in the minority. This fact may perhaps help to reassure the assistant teachers who are protesting against the Minimum National Scales, and threatening to secede because their interests have not received

proper attention in the past. Whatever its business qualities, the new Executive will not be open to the charge of not representing the views of the ordinary members of the profession.

Educational Research.

The formation of a Special Committee for the initiation and conduct of educational research, at the instance of the Institute Council, has been hailed with general approval. Most teachers are rather tired of the constant preoccupation with the salary question to which they have been condemned by the circumstances of the times for the last two or three years, and there is a widespread desire to get on with proper professional business. The movement for the promotion of research work in education is consequently a timely one. It still remains to be seen whether it will be possible for the Committee to carry the profession with it in this matter. Much will depend on the character of the problems chosen for investigation. The Convener of the Committee is Dr. William Boyd, Lecturer on Education in Glasgow University. The Committee, it is expected, will include as co-opted members various experts in educational experiment.

Training College Administration.

A complete reconstitution of the system of training-college government is impending, in consequence of the provision in the Education Act which makes the financing of the colleges a direct charge on the Education Authorities. The details of the scheme are still under discussion. Regarding the need for a different system there is widespread agreement. The training colleges under the nominal control of the four Provincial Committees and the real control of the Education Department, while more efficient than the Church colleges they superseded, have been disappointing on the personal side. There has been a considerable amount of discontent, both among students and among lecturers. It is specially rife among the latter at the present time. The immediate cause is inadequate salaries, but behind the dissatisfaction on that score is the objection to a system which permits the Education Department to disregard the views of the Provincial Committees and to pay less than the Committees consider reasonable. The Edinburgh Committee, on a recent occasion, for example, were of opinion that a lecturer on science whom they were appointing should receive not less than £350. The Education Department vetoed the proposal as involving excessive expense.

diture. The incident is characteristic, and helps to explain the unhappy spirit animating the training-college staffs. With governing bodies enjoying greater freedom and responsibility, the trouble would probably not have arisen. The change cannot come too soon.

The movement for a closer co-ordination of the training colleges and the Universities makes steady progress. The Edinburgh Training College Authorities do everything possible to encourage all their students, including those taking the two-years' course, to go to the University for some of their subjects, and make it easy for post-graduation students and those taking a four-years' course to work for the Education Degree. The arrangement, just instituted in Aberdeen, by which training-college students all go to the University for Education and English, is an even more important step in the right direction. It is a partial anticipation of the recommendation made by the Scottish Education Reform Committee that teachers in training should take as much of their course as possible (especially in cultural subjects) in the Universities instead of attending special classes in the training colleges.

The opening of the first session after the war has been marked by unusual features. In all four Universities an unprecedented number of new professors have been delivering inaugural addresses. Some of them are the first occupants of chairs created to meet the needs of the times in science and commerce: others represent appointments held over till the return of peace. Students, back from the Army and Navy, have come forward in embarrassing numbers, and there is a record enrolment in all the centres. In Edinburgh over four thousand students have matriculated, and the number in Glasgow is reported to be nearly as great. The difficulty caused by their return has been felt most in medicine and science, where the numbers are limited by laboratory accommodation. Preference has been given to ex-Service men at the expense of those who would normally have come in this year.

The students in Glasgow and St. Andrews have elected their new Lord Rectors. In Glasgow Mr. Bonar Law was at the top of the poll with 1,073 votes, against Prof. Gilbert Murray, the Liberal candidate, who had 726 votes, and Mr. Bertrand Russell, the Socialist candidate, with 80 votes. In St. Andrews, Sir James

Barrie (a graduate of the University) has been elected Lord Rector, having received 283 votes as against 139 for the Marquis of Bute.

The answers given by the Scottish Secretary in Parliament to the questions of Mr. MacCallum Scott regarding Parliamentary grants to the Scottish Universities show that the Government are taking a large and generous view of their obligations in the matter of higher education. In addition to payments under the Act of 1889, &c., emergency grants to a total of £131,500 have been made. Of this sum £54,500 is non-recurrent, being intended to help in making good the arrears consequent on deferred expenditures in war time: £77,000 is recurrent and is given (among other things) for the readjustments made necessary by the changed value of money, and therefore specially for salaries. The Universities have been left free to apply these special grants, and the manner of the allocation has not pleased everybody. The junior staffs complain that too much of the money given for the improvement of salaries has gone to the professors.

Edinburgh University Court have agreed to proceed at once with the establishment of a new Chemistry School at a cost of £250,000. £30,000 has been received from the business community for the endowment of a chair and a lectureship in connexion with the Faculty of Commerce in Edinburgh.

Mr. A. J. Balfour has been appointed Gifford Lecturer in Glasgow for 1920-21. This is his second term. His first course of lectures was delivered the year before the war.

M. Raymond Poincaré, President of the French Republic, who was elected Lord Rector of Glasgow University in 1914, has signalized the conclusion of his term of office by delivering an interesting address on the relations of France and Scotland, past and present.

IRELAND.

The one absorbing topic of interest during the past month has been the promised Education Bill for Ireland. The Chief Secretary declared that it would be introduced into the House of Commons as soon as the exigencies of Parliament permitted. Questions elicited that

it was to be expected soon, but it still delays, and at the time of writing no definite date has been fixed for its appearance. Rumour says that the committee of five who drafted it in the early summer have been called together again to consider some new details, but probably conjecture would not be far wrong if it surmised that the difficulty lies with the Treasury. The Government have, indeed, declared that education is one of the things in which false economy would do great harm, but the Treasury will not willingly make sacrifices for Ireland, and it will need firmness to secure for this country the benefits so freely given to England and to Scotland. Hope suggests that the Bill may appear before December, but if it does not there will be little possibility of its becoming law this year. But it is certain that educational reform is essential for Ireland, and postponement does not solve, but only increases, difficulties. P.S.—The Bill is being introduced on November 24.

New Rules, dated August 11 last, for the application of the £50,000 grant were published towards the end of October. One important change in the method of distribution has been made. The

grant is to be at a flat uniform rate to all qualified schools, and no school will receive more because it engages and pays more than the necessary minimum number of teachers. A school with fifty-nine qualified pupils must have one recognized teacher and gets no extra credit for having two. These rules are retrospective for last year. This is unsatisfactory, as the principles of grant payments should be known in advance. Under the Rules the Intermediate Board have power to spend up to £2,000 in courses of instruction for teachers, and have begun making preliminary inquiries as to what teachers would like such courses, in what subjects, and at what time of the year. The desirability will be considered of holding them in Dublin, Belfast, and Cork.

The Technical Education Committee for the County Borough of

Day Apprentice School.

Dublin have initiated a thoroughly praiseworthy scheme, under the title of "Day Apprentice School." Its object is to give a specialized training from the outset of their industrial career to boys who desire to enter trades. They must be over fourteen years of age and have passed the sixth standard or its equivalent. Approximately a hundred scholarships will be awarded each year on the entrance examination, giving free training with books and instruments, and, in addition, a payment of £15. 12s. for the first year

and £20. 16s. for the second. There will also be, in addition, about fifty free places. The instruction will be in the daytime for thirty hours weekly for forty-six weeks in the year, and will have a distinctly practical tendency. The boy will be allowed to choose his own trade, and the two years' training will count in full as part of the apprenticeship period. The Committee will work with the Employers' and Trade Associations in finding places for the boys as apprentices. For the first year the scholarships offered are: thirty for building trades, thirty for mechanical engineering, twenty for electrical engineering, and ten each for printing and furniture trades.

The Department have issued No. 4 of Vol. XIX of their Journal.

Technical Education.

It is nearly all concerned with agriculture, but the address of the new Vice-President, Mr. Barrie, contains some interesting remarks on education. Now that the war is over, the Department intend to develop to a higher degree than before their system of direct agricultural instruction; and, in particular, it is necessary to establish an institute for agricultural research. For this object the Treasury are granting £40,000 a year for the next five years. On technical education his speech was not so hopeful. Owing to lack of funds and to the decreasing value of money technical instruction cannot be maintained at its pre-war level, and the Department have been obliged to refuse assent to new schemes of development because of the utter inadequacy of the funds to carry them out. Up to the present the Treasury have not seen their way to make any increase in grants.

GENERAL.

In answer to questions asked in the House of Commons, Mr. Fisher has recently supplied teachers with interesting information. He stated that service in a private school certificated by an Inspector of the Board, a Local Education Authority, or by a University, as educating its scholars satisfactorily, will be accepted as qualifying service under the Superannuation Act, so far as service after April 1, 1919, is concerned; so also will service, past as well as future presumably, in any University or University College as professor, teacher, demonstrator, or lecturer. The figures given by him as to the amount set aside to provide for full-time courses of higher education are instructive. The total

(Continued on page 824.)

The "Tutorial" System of Correspondence Tuition makes a success of every willing student.

The "Tutorial" Correspondence Courses are based upon the best educational experience and compiled from unequalled sources of information and specialized knowledge. The work of the correspondence student is closely scrutinized, minutely checked, criticised, and appraised by a tutor interested in producing the best individual results and alive to the closest co-operation necessary between himself and the student.

ALL "Tutorial" Tutors have been directly connected with University work for a number of years. Under their guidance, industrious candidates have a surer guarantee of success than any other training system or institution can afford. Being individual coaching from start to finish, the Tutorial Correspondence Tuition is incomparably efficient.

Special provision is made for coaching candidates for all examinations connected with the Teaching profession. Particular attention is devoted to special subjects if necessary, so that backward students may quickly recover lost ground.

The Tutorial College Correspondence Tuition affords complete Training in Art, Science, Medicine, Economics, Laws, &c., preparatory for University and Professional Examinations, as well as for the Indian, and Home Civil Service Examinations.

Salary £500 per annum, with board and residence. Five copies of applications, and not more than three testimonials, must be sent not later than December 5th, 1919, to Miss H. F. COHEN, 18 Albert Court, South Kensington, S.W.7, from whom further particulars can be obtained.

SENIOR MISTRESS (graduate) required, large Private School. Essential subjects, Botany, Elementary Science, Geography, some Arithmetic. Applications to—Buckhurst Hill Girls' School, Essex.

Posts Vacant—continued.

URBAN DISTRICT OF SPENBOROUGH.

APPOINTMENT OF DIRECTOR OF EDUCATION.

The Council of the above District invite applications for the position of DIRECTOR OF EDUCATION for their District.

Candidates must have had actual experience in the administration of Elementary Schools and be thoroughly acquainted with the Regulations of the Board of Education with regard thereto.

They must be competent to advise the Education Committee upon all matters relating to the supply and co-ordination of all forms of Education within the Urban District, including the organization of Technical, Evening School, and other Classes.

The salary attaching to the position will be £400 per annum.

The appointment will be subject to three months' notice on either side.

Forms of application containing list of duties may be obtained at my Office, and must be returned to me, accompanied by copies of three recent testimonials, not later than the 10th day of November, 1919.

Canvassing members of the Council either directly or indirectly will be deemed a disqualification, but applicants, if they so desire, may send 14 copies of their applications and testimonials to me for the use of the Staff Committee.

JOHN H. LINFIELD,
Town Hall, Cleckheaton. Clerk to the Council.
24th October, 1919.

Desk T 97, SKEGNESS.

WANTED, DIRECTOR OF PHYSICAL EDUCATION and One ASSISTANT IN PHYSICAL EDUCATION for the Saskatoon Public Schools. Applicants are requested to state clearly: (1) the character of their academic (English) training, names of institutions where secured, and time spent at each; (2) full details of their special training in Physical Education, including name of institution where training was received, length of course, subjects studied, &c.; (3) experience in teaching Physical Training with adults, and with children. Instead of submitting copies of testimonials, applicants are requested to have those whose names are submitted as references write direct and confidentially to the Secretary-Treasurer. State salary expected.—WILLIAM P. BATE, Sec.-Treas., Saskatoon, Sask., Canada.

WANTED, after Christmas, thor- oughly experienced TEACHER OF DOMESTIC ECONOMY for Household School in Denmark. Must be an educated gentlewoman, over 30 years of age. Good salary to competent person. Apply, giving all particulars, to Countess RABEN-LEVETZAU, The English School, Nysted, Denmark.

* Replies to these advertisements should be addressed "No. —, c/o Mr. William Rice, 3 Ludgate Broadway, E.C.4." Each must contain sufficient loose stamps to cover postage on to advertiser. Post cards will NOT be sent on.

amount is £6,000,000, of which the awards already made commit the Board to an expenditure of £4,500,000. There are no fewer than 15,000 approved applicants. Of course, only a moiety of these will become teachers. If even a comparatively small proportion of them enter our profession the effect upon the present shortage will be appreciable. It is said that a number of ex-Army elementary school teachers are taking advantage of these courses in order to graduate and enter secondary schools. On the question of the medical examination of ex-Service teachers for the Superannuation Act, he refused to initiate legislation to exempt them from the provisions of the Act, but promised to dispense with the examination where it could be done consistently with the Act itself. The various Associations of teachers have been pressing for this and, chiefly in consequence of a deputation from ex-Army men themselves, it is hoped that a method of doing so has been devised.

PRIZE COMPETITIONS.

THE Prize for the November competition is awarded to "J. S."; *proxime accessit*, "666."

The winner of the October competition is the Rev. H. J. Chaytor, St. Catharine's College, Cambridge.

Extract from Renan's "L'Antéchrist."

By J. S.

Nero's raging madness had reached its climax. It was the most horrible ordeal through which the world had ever passed. The absolute necessity of the times had bestowed omnipotence upon a single man, the inheritor of the great legendary name of Caesar; any other régime would have been impossible, and the provinces, generally speaking, had little fault to find with this one; but beneath it an immense danger lay concealed. When the Emperor lost his reason, when all the arteries of his poor head, dazed by a power without parallel, gave way in a single moment, follies without name were the consequence. A monster was let loose upon the world. To get rid of him was impossible; his body-guard, composed of Germans, to whom his fall meant ruin, rallied fiercely round him; the wild beast, driven to its lair, turned to

bay and defended itself madly. Nero himself presented a spectacle at once appalling and grotesque, magnificent and absurd. The emperor was a man of wide reading, and thus his madness took chiefly a literary form. The dreams of all the ages, all poems and all legends, Bacchus and Sardanapalus, Ninus, Priam, Troy and Babylon, Homer and the lifeless poetry of his own day, were jumbled chaotically together in the unhappy brain of a mediocre, but highly opinionated artist, on whom chance had conferred the power of realizing all his fantastic visions. Imagine a man with about as much common sense as the heroes of Victor Hugo, a Shrove Tuesday figure, a mixture of fool, cotquean and actor, clothed with supreme power and set to govern the world. His was not the black wickedness of Domitian, the love of evil for evil's sake; neither was he an extravagant like Caligula; he was a conscientious romanticist, an emperor of the operatic stage, a melomaniac trembling before the pit and making the pit tremble; comparable in our own day to some plain citizen whose brain had been turned by the study of modern poetry, and who felt constrained to model his conduct on Han d'Islande and the Burgraves. Government is of all practical matters the most practical, and romanticism has no place in it. For it is in the domain of art that romanticism is at home; but action is the antipodes of art.

The passage was an easy one, but competitors did not find it easy to hit the happy mean between tame and inflated language; a large number erred in the latter direction. The prize-winner need not have substituted "ordeal" for *aventure*; the latter word, with its suggestion of unknown dangers and horrors exactly suits the situation. Nor need he have used the French word *régime* when "rule" and "government" are ready to his hand. But to transcribe *bourgeois* as many did was a still worse error; "honest tradesman" gives the meaning to a nicety. Is "an extravagant" English? Better "whimsical" or "fantastic." Renan is thinking, no doubt, of Caligula making his horse a consul, and other whims, less harmless. We can find no authority for "melomaniac" as an English word; say "crazy musical amateur." For *jocrisse*, "cotquean" is right; it means a man who does the women's work in the house, a common character in old comedy. "Nincompoop" and "simpleton" might pass, but "dolt" and "fool" are clearly wrong.

Special Christmas Prize Competition.

A Prize of One Guinea is offered by the Editor of
The University Correspondent,

Burlington House, Cambridge, for the best original collection of twelve "Howlers," or Schoolboy blunders, which will appear in the issue of January 1st, 1920. Every collection of twelve "Howlers" must be in a separate envelope, and must bear the words "Howlers Prize Competition" on the outside of the envelope.

Entries must reach the Prize Editor, Burlington House, Cambridge, not later than December 20th.

SHAKESPEARE.—For Oxford and Cambridge Locals.

LECTURE RECITALS (To Schools and Colleges). By Mr. ADRIAN HARLEY.

1919, "As You Like It," "Twelfth Night." 1920, "The Tempest," "Hamlet," &c.

H. NICHOLSON, Esq., M.A., Head Master of Watford Grammar School writes: "The Recital given by Mr. Adrian Harley was eminently successful. The introductory lecture upon the Shakespearean stage was extremely lucid and most attractively given. He held the interest of the boys from start to finish. The lecture has been of real service to us."

FOLKESTONE BOROUGH EDUCATION COMMITTEE.

THE HARVEY GRAMMAR SCHOOL.

APPOINTMENT OF HEAD MASTER.

The Governors are desirous of receiving applications for the appointment now falling vacant of **HEAD MASTER** of the Folkestone Harvey Grammar School, a Secondary School for Boys. Candidates must be Graduates of a University in the United Kingdom or have such other equivalent qualification as may be approved by the Board of Education. Pupils attending the School may reside with the Head Master at such fee as the Governing Body may approve, but a Head Master's residence is not provided by the Governors. The School is carried on under Articles of Government approved of by the Board of Education, and the appointment will be made subject thereto. The official accommodation of the School is 150, but the number of pupils at present exceeds 180. It is possible the School may be enlarged.

The present salaries scale fixes the maximum at £600, which, however, may be increased at the discretion of the Governing Body to £800.

The Governing Body are desirous of securing the services of a Head Master who has had experience of Schools organized on a modern basis.

Applications (there is no prescribed form) stating age, qualifications, and previous experience, together with copies of not less than three recent testimonials, must be sent to the undersigned not later than the 8th December, 1919.

THOS. WILKINSON.

Clerk of the Education Committee.

Class IV.—Grandpère, Fireplace, Tuilier, Excelsior (Neron), Highfield, Bluebottle, Philomène, Punch.

A Prize of Two Guineas is offered for the best translation of the following extract from Novalis' "Heinrich von Ofterdingen":—

DIE DICHTER.

Anders ist es mit jenen ruhigen, unbekannten Menschen, deren Welt ihr Gemüt, deren Tätigkeit die Betrachtung, deren Leben ein leises Bilden ihrer innern Kräfte ist. Keine Unruhe treibt sie nach aussen. Ein stiller Besitz genügt ihnen, und das unermessliche Schauspiel ausser ihnen reizt sie nicht, selbst darin aufzutreten, sondern kommt ihnen bedeutend und wunderbar genug vor, um seiner Betrachtung ihre Muse zu widmen.

Grosse und vielfache Begebenheiten würden sie stören. Ein einfaches Leben ist ihr Los, und nur aus Erzählungen und Schriften müssen sie mit dem reichen Inhalt und den zahllosen Erscheinungen der Welt bekannt werden. Nur selten darf im

Verlauf ihres Lebens ein Vorfall sie auf einige Zeit in seine raschen Wirbel mit hereinziehen, um durch einige Erfahrungen sie von der Lage und dem Charakter der handelnden Menschen genauer zu unterrichten. Dagegen wird ihr empfindlicher Sinn schon genug von nahen unbedeutenden Erscheinungen beschäftigt, die ihm jene grosse Welt verjüngt darstellen, und sie werden keinen Schritt tun, ohne die überraschendsten Entdeckungen in sich selbst über das Wesen und die Bedeutung derselben zu machen. Es sind die Dichter, diese seltenen Zugmenschen, die zuweilen durch unsere Wohnsitze wandeln, und überall den alten ehrwürdigen Dienst der Menschheit und ihrer ersten Götter, der Gestirne, des Frühlings, der Liebe, des Glücks, der Fruchtbarkeit, der Gesundheit und des Frohsinns erneuern; sie, die schon hier im Besitz der himmlischen Ruhe sind, und von keinen törichtlichen Begierden umhergetrieben, nur den Duft der irdischen Früchte einatmen, ohne sie zu verzehren und dann unwiderruflich an die Unterwelt gekettet zu sein. Freie Gäste sind sie, deren goldener Fuss nur leise auftritt, und deren Gegenwart in Allen unwillkürlich die Flügel ausbreitet. Ein Dichter lässt sich, wie ein guter König, frohen und klaren Gesichtern nach aufsuchen, und er ist es, der allein den Namen eines Weisen mit Recht führt. Wenn man ihn mit dem Helden vergleicht, so findet man, dass die Gesänge der Dichter nicht selten den Heldenmut in jugendlichen Herzen erweckt, Heldentaten aber wohl nie den Geist der Poesie in ein neues Gemüt gerufen haben.

Initials or a nom de guerre must be adopted by ALL competitors, but the prize-winners and the competitors awarded the second place will be required to send real names for publication if necessary.

No competitor will be awarded a prize more than ONCE during a given year, though the name of the competitor gaining the first place will be published each month.

All competitions must reach the Office by the first post on December 15, addressed "Prize Editor," THE JOURNAL OF EDUCATION AND SCHOOL WORLD, 3 Ludgate Broadway, London, E.C. 4.

Posts Vacant—continued.

These School and Teachers' Advertisements are continued from page 825.

THE SECONDARY, TECHNICAL AND UNIVERSITY TEACHERS' INSURANCE SOCIETY

(The S.T.U.T.I.S.)

Registered under the Friendly Societies Act, 1896. Regd. No. 1424 London.
Approved under the National Insurance Act, 1911. Approval No. 261.

Chairman: Sir JOHN D. McCURE, LL.D., M.A.

All persons whose main work is teaching other than in Public Elementary Schools are eligible for membership of this Society.

STATE SECTION:—

The forthcoming Valuation will, it is expected, show that this Section is in a very strong position and that valuable additional benefits will be able to be offered to its members.

Members who have been insured for at least two years, and who are passing out of Insurance in consequence of the Superannuation Act, or of larger salaries, are entitled to become *Voluntary Contributors*, and thus share in the Additional Benefits which they themselves have helped to create.

DIVIDEND SECTION:—

This Section is independent of the State Section and is for the insurance of those teachers to whom the Insurance Act does not apply, or *who desire additional benefits*. It possesses the advantage of a Savings Bank (by the creation of Own Funds and Deposit Accounts), and offers at a very low cost Sick Benefits up to £3 3s. per week. Hitherto about two-thirds of the members' annual contributions have been returned to them each year by being placed to the credit of their Own Funds.

For information apply to the SECRETARY,
10 Mecklenburgh Square, London, W.C.1.

The Future Career Association.

(Established 1904.)

THE Governing Body are prepared to receive applications for the appointment of a HEAD MISTRESS of this School, from candidates not exceeding forty years of age.

The School is recognized by, and receives a grant from, the Board of Education.

The Head Mistress will have a house assigned to her free of charge for rent, rates, and taxes, and a commencing salary of £550 a year, and will be required to commence her duties immediately after the end of the first term of 1920.

Forms of application and detailed particulars may be obtained from the CLERK TO THE GOVERNORS, to whom applications, with testimonials (not to exceed four), should be forwarded on or before the 20th December.

Canvassing will be a disqualification.
JOHN E. DAW,
Clerk to the Governors.

13 Bedford Circus, Exeter.
24th November, 1919.

REQUIRED, in January:—
KINDERGARTEN MISTRESS, fully qualified and experienced. A knowledge of Montessori methods would be an advantage.

GEOGRAPHY MISTRESS, Oxford Diploma preferred.

Subsidiary subjects for either of the above: Class Singing or Latin or Games.

Salary scale: Graduates, £150, rising by £10 to £210, and then by £15 to £330. Non-graduates, £110, rising by £10 to £200, or more in special cases.

The initial salary will depend upon qualifications and experience.

Apply—**THE HEAD MISTRESS, Girls' High School, Bilston, Staffs.**

REQUIRED in January, VISITING MISTRESS, three hours weekly, for Botany to Matriculation standard. Apply—**HEAD MISTRESS, High School, Ltd., Sidcup, Kent.**

BLACKIE'S FRENCH BOOKS

Experience has proved that Messrs. BLACKIE & SON'S Books take a foremost place by reason of their scholarly editing, clear type, strong binding, and reasonableness in price.

A JUNIOR FRENCH COURSE.

FIRST AND SECOND YEARS.

::

PUBLISHED IN TWO VOLUMES.

By E. J. A. GROVES, Lic. ès L., Senior French Master, Bedford Grammar School.

First Year, 2s. 6d. net.

Second Year, 4s. net. Now Ready.

The need of a practical French Course combining the essentials of the "Direct Method" with sound grammatical teaching has long been felt, and has been lately emphasized by the Reports on the *Teaching of French* issued by the Board of Education and the London County Council respectively. The "Direct Method" alone has been found to leave the pupils ill prepared for precise expression or exact renderings in translation, and generally wanting in an exact knowledge of French. Mr. Groves's *Junior French Course*, now issued, undoubtedly demands the consideration of all Modern Language teachers, for it will be found to combine all that is useful of the "Direct Method" with systematized grammatical instruction, largely by process of induction.

BLACKIE'S LONGER FRENCH TEXTS.

From Modern French Literature. Printed in large, clear type, with brief Notes, Exercises, Phrase List, and Vocabulary. Fcap. 8vo, 10d. net each.

BLACKIE'S LITTLE FRENCH CLASSICS.

Representing all important French Authors from Montaigne to Bourget. Fcap. 8vo. 6d. each.

FIRST STEPS IN COMMERCIAL FRENCH.

Being everyday scenes of business life described in colloquial language, with Exercises, Letters, Synopsis of Grammar, and Vocabulary. By ALBERT THOUAILLE, M.A., and E. E. WHITFIELD, M.A., sometime Lecturer at the School of Commerce, University College, Liverpool. New and Revised Edition. 2s. net.

COURS DE FRANÇAIS, d'après les Textes.

By M. ANCEAU and E. MAGEE, Edgbaston High School for Girls, Birmingham. Cloth boards, 2s. 6d. net.

BLACKIE'S COPYRIGHT FRENCH TEXTS.

A new series drawn from contemporary French Literature. With Notes and Exercises written in French, and Vocabulary. 1s. net each.

LE LIVRE ROUGE.

A First Book of French in Coloured Pictures. By E. MAGEE, Edgbaston High School for Girls, Birmingham. With many full-page Coloured Pictures and other illustrations. Fcap. 4to. 2s. 6d.

LE LIVRE BLEU.

A Second Book of French in Coloured Pictures. By E. MAGEE. With sixteen full-page Coloured Pictures and many other illustrations. 2s. 6d.

A SKELETON FRENCH GRAMMAR.

By Professor ATKINS, M.A., King's College, London. The "irreducible minimum" printed in red and black. 2s. net. With Exercises 2s. 6d. net. Exercises only, 1s. 6d.

A NEW SERIES OF FRENCH HISTORICAL READINGS FROM ORIGINAL SOURCES.

ÉPISODES MÉMORABLES DE L'HISTOIRE DE FRANCE.

General Editor: LOUIS A BARBÉ, B.A., Officier d'Académie.

PRISE DE LA BASTILLE, from Michelet's *Histoire de France*.

LA ROUTE DE VARENNES, " " "

LES FRANÇAIS A LA 1^{ère} CROISADE, " " "

STRONGLY BOUND IN LIMP CLOTH. Price 9d. net each.

BLACKIE & SON, LTD., 50 OLD BAILEY, LONDON, E.C.4.

AND AT GLASGOW AND BOMBAY.

Supplement to

THE JOURNAL OF EDUCATION AND SCHOOL WORLD.

No. 605.

DECEMBER 1, 1919.

Cambridge University Press

Britain and Greater Britain in the Nineteenth Century

By E. A. HUGHES, M.A. Crown 8vo. 5s net

"The work is interesting and illuminating, and can be thoroughly recommended to all who wish to study the history of our Empire during the last century. . . . The author is to be congratulated upon having achieved a work of high quality and wide utility."

The Teacher's World

Cambridge Readings in Literature

A Series of Anthologies from Homer to Masfield, illustrated with reproductions of pictures by great masters, from Botticelli to William Orpen. Edited by GEORGE SAMPSON. In five books. Crown 8vo. School edition, cloth flush. Books I, II, and III, 3s 6d net each; Books IV and V, 4s net each

"We have never seen more delightful books of their kind, and we predict that they will receive the most cordial of welcomes from teachers of English."—*The Scottish Educational Journal*

Plane Trigonometry for Secondary Schools

By C. DAVISON, Sc.D. Crown 8vo. 6s 6d net

"This volume has the virtue of clarity of style and simplicity of explanation. . . . The somewhat advanced second part deals with inequalities, approximations and errors, with de Moivre's theorem and various series."—*The Times Educational Supplement*

The Letters of Charles Sorley. With a Chapter of Biography. Demy 8vo. With a portrait. 12s 6d net

These letters of Charles Sorley have been published in response to many requests from readers of *Marlborough and Other Poems*. In his familiar letters to his family and friends there is material enough, when taken along with the poems, for forming a picture of the writer. There is also in them a picture of the times, especially in Germany, immediately before the war, and a criticism of life and literature, which may be found to have a value of their own.

The Holy Sepulchre, Jerusalem, and other Christian Churches in the Holy City. A brief description, with some account of the mediæval copies of the Holy Sepulchre surviving in Europe. By G. JEFFERY, F.S.A. Demy 8vo. With 59 illustrations and plans. 10s 6d net

There are certain aspects of the greatest of Christian monuments which still remain comparatively unknown. The author has cast into book form the notes which he made some few years back, and has presented these studies in a way which, he hopes, will interest others in the most famous of Christian relics.

Notes on Magnetism for the use of Students of Electrical Engineering. By C. G. LAMB, M.A. Crown 8vo. Paper covers. 5s net

Contains an outline of such portions of magnetic theory as are required by a student in order to read the ordinary technical textbooks with intelligence.

Examples in Heat and Heat Engines.

By T. PEEL, M.A. Crown 8vo. Paper covers. 5s net

Questions arranged in short papers of increasing difficulty, and taken from papers set for the courses of lectures at the Cambridge Engineering Laboratory and from the A and B papers of the Engineering Tripos.

Exercises on Rules for Latin Prose.

By T. C. WEATHERHEAD, M.A., sometime Head Master of King's College Choir School, Cambridge; formerly Bell University Scholar. Crown 8vo. 2s 6d net

Key to Exercises on Rules for Latin

Prose. By T. C. WEATHERHEAD, M.A. Crown 8vo. 7s 6d net

Accounts Rendered of Work Done and Things Seen. By J. Y. BUCHANAN, F.R.S. Demy 8vo. With illustrations. 21s net

This book contains papers on—The Mediterranean Sea; Monaco a Whaling Station; The Cruise of the "Princesse Alice" (1902); The Sperm Whale and its Food; The Wreck of Santos Dumont No. 6 (1906); Volcanoes and Earthquakes; Transportation and Civilization; Civilization and Extinction; and many other subjects. A prospectus will be sent post free on application.

Palaeontology: Invertebrate. By H. WOODS, F.R.S. Fifth edition. Crown 8vo. With 173 text-figures. 12s 6d net. Cambridge Biological Series

The general plan of this work is to give, in each group of the Invertebrata, first, a short account of its general zoological features with a more detailed description of the hard parts of the animals; secondly, its classification and the characters of the important genera, with remarks on the affinities of some forms; and thirdly, a description of the present distribution, and the geological range. Some new figures have been added in this edition, and the work has been revised throughout.

A Course of Practical Chemistry for Agricultural Students. Volume II, Part I. By H. A. D. NEVILLE, M.A., F.I.C., and L. F. NEWMAN, M.A., F.I.C. Demy 8vo. Paper covers. 5s net

Volume II, Part I, deals with such exercises in Pure Organic Chemistry as are essential for agricultural students and is entirely qualitative.

The Study of the Weather. By E. H. CHAPMAN, M.A., B.Sc. Large crown 8vo. With 56 maps and illustrations. 3s 6d net Cambridge Nature Study Series

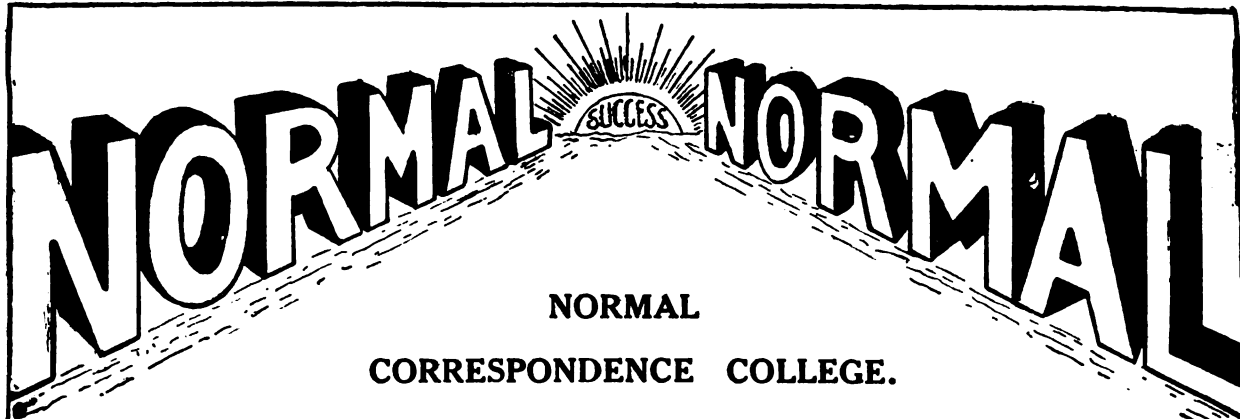

"For school use this is, without doubt, the best book yet published on the subject."—*The Journal of Education*

Plautus: Menaechmi. Edited, with introduction and notes, by CLARA M. KNIGHT, D.Lit. Extra fcap. 8vo. 5s net. Pitt Press Series

Thucydides, Book IV, Chapters I-XLI (Pylus and Sphacteria). Edited by J. H. E. CREES, D.Lit., and J. C. WORDSWORTH, B.A. Extra fcap. 8vo. With map, notes, and vocabulary. 2s 6d net. Cambridge Elementary Classics

The Cambridge Bulletin, No. XXXIV, October 1919, giving particulars of books recently published by the University Press, is now ready, and will be sent post free on application.

FETTER LANE, LONDON, E.C. 4: C. F. CLAY, MANAGER

NORMAL CORRESPONDENCE COLLEGE.

THE EFFICIENT AND SUCCESSFUL CORRESPONDENCE COLLEGE.

(FOUNDED 1889.)

The Normal makes sure of Success.

HOW IT IS DONE

NORMAL TUTORS AND NORMAL TUITION.—The Normal Courses are carefully and thoughtfully prepared by the Principals, assisted by other experts with long experience in this particular work. Changes in the syllabus are specially noted, difficulties are anticipated, any alteration in the standard of attainment required is marked, useful suggestions from former students and others incorporated, and every detail likely to affect the student is given the closest attention. The capital at the command of the Normal ensures the engagement of tutors of the very first rank, with the result that the Normal tuition is the best correspondence tuition available. The Normal aims at perfection, and spares neither time nor trouble to secure it.

METHOD OF PREPARATION.—At the beginning of each lesson a set of papers is sent to each student to be studied. The work sent is carefully graded, and the individual capacity and requirements of the pupil are minutely considered in allotting the ground to be covered. Full notes, hints, and advice accompany the work, with explicit instructions for study and working the exercises.

Thorough preparation for the examination is the essence of Normal tuition; true education in the best sense of the word is always kept in view.

CORRECTION OF WORK-PAPERS.—When completed by the students, the work-papers are sent to the College. They are carefully corrected, either by or immediately under the supervision of the Principals themselves, and promptly returned with complete solutions, model answers, maps, diagrams, &c. Difficulties are smoothed, hazy points elucidated, and more work is sent, the quantity varying with the capacity of the student.

FORECASTS OF QUESTIONS.—A test paper is sent every week, containing questions which have actually been set and shrewd forecasts of questions likely to occur. The value of the student's work is assessed and recorded in the College registers, so that the Principals always have their finger on the pulse of the Normal system.

PUPILS ENCOURAGED TO STRIVE.—By every legitimate means, the student is encouraged and stimulated to energetic effort. Occasional letters are despatched with the sole object of keeping the pupil up to pitch, and urging him to put forth his best efforts, so as to be certain of success.

WHY THE NORMAL GIVES MONEY PRIZES AND MEDALS.—The Principals, Messrs. Lyddon-Roberts and Denney, give prizes first of all as a stimulus to work, secondly to assist their successful students to pursue their studies in the higher branches of knowledge, and thirdly to call attention to the system of tuition which, judged by results alone, stands easily first as the most successful—the Normal Correspondence College.

REVIEWS AND MINOR NOTICES.

UNMUZZLED, BUT NOT DANGEROUS.

The English Elementary School: Some Elementary Facts about it. By A. W. NEWTON, formerly an Inspector of the Board of Education. (6s. net. Longmans.)

"At last I am come among you unmuzzled" is the historic phrase that occurs to one in taking up a book of recollections and opinions, set down by a man who has spent a working life-time as a school Inspector, and whose retirement enables him to cast off the strict restraints of official etiquette. Only a Matthew Arnold could dare to say, sometimes openly and sometimes under the thinnest of disguises, just what he thought of the school system whilst he was still helping in its administration. But then Arnold, "the spoilt child of the Department," only played at being an official. We could have done very well with instalments of Mr. Sneyd-Kynnersley's gay humour, and even of Mr. A. J. Swinburne's discursive notes, before the close of their official careers. As for Mr. Holmes, the world would surely have been a better place for others, and a happier place for himself, if he had been free to pour forth his soul on the subject of education twenty years earlier. Still, in his case there was no doubt much to be said, from some points of view, for the existence behind the scenes of a powerful personality, whose voice did not, except by accident, reach the ears of the educational public.

One would easily have gathered from his book, and apart from personal knowledge, that Mr. Newton has ever shone as the perfect official. If he has any enemies, which we doubt, the worst of them must admit his complete and accurate knowledge of our elementary-school system, and his consistently judicial attitude of mind. Some of his best friends, on the other hand, would probably admit that the prolonged practice of official reserve has so worked upon a naturally cautious disposition as to make Mr. Newton abnormally reluctant to express a strong opinion. We have heard it said that he advocates cheap teachers. In a double sense this is a libel. For only by a stretch of language can he be said to advocate anything; and at any rate there is no indication whatever that he favours cheap teachers, though he does go so far as to say that the proper qualification for a nursery-school assistant is not necessarily that of an ordinary assistant.

A very good instance of Mr. Newton's extreme cautiousness is his comment upon the fact (to which we also can bear witness) that whereas at one time foolish or obscene inscriptions and drawings were far from uncommon in the out-offices of schools, they are now seldom to be met with. The time to which he refers was also a time when a dozen public-houses existed in a country town where there are now only three or four; when drunkenness was far more common than now; and when, in fact, the moral tone of the community was generally lower. Here is surely a case in which one may heartily admit that progress has been made, and that those "damned Board Schools," to quote Mr. Fisher's quotation, may have had something to do with it. Not so Mr. Newton: he coldly tells us that "too much must not be made" of these changes. Numerous other instances might be given of Mr. Newton's rather exasperating cautiousness, but two must suffice. We believe that any authority on language teaching would now hold that under the ordinary conditions of school instruction, and apart from the special case of a bilingual home or district, no child should begin two foreign languages at the same time; but Mr. Newton still speaks of this question as an open one. Again, Mr. Newton leaves us to suppose that it is probably immaterial whether we teach an arithmetical rule first and give the reason for it afterwards, or adopt what has been called the method of discovery—so long as both rule and reason are given in the end. We think (though our statement might need qualification in detail) that any good teacher would say that here lies the whole difference

between the old teaching and the new; between leading the child by the nose and cultivating in him the spirit of inquiry.

We turn to one or two matters as to which Mr. Newton appears to have abandoned the safe official attitude, the attitude of the open mind. Prominent among these is the subject of physical training. He notes the curious fact that, whereas in all other branches of instruction the Board has given up the practice of prescribing a uniform syllabus, in this branch the Board, acting on the advice of its medical officers, prescribes a syllabus from which it brooks no important deviation. He not only admits that both teachers and scholars are often bored by the exercises, but, to our intense satisfaction, he goes so far as to say that the central authority, if pressed by an important Local Authority, "could not maintain the quasi-papal infallibility of its medical officers, and the superiority of its authorized scheme over all other possible schemes." Coming from Mr. Newton, this is condemnation indeed. Another matter upon which Mr. Newton expresses a quite definite opinion is that of Nature study. He thinks it should not be compulsory, because many teachers have no taste for it. Of course the argument is rather dangerous, because if it were followed to its logical conclusion, no subject could be made compulsory. Still, we sympathize with Mr. Newton's point of view. The real fountain-head of efficiency in this kind of thing is the training college, and not until the training colleges have been able to send out a sufficient number of duly instructed teachers can any good result be obtained by making a subject compulsory in the schools. In making Nature study compulsory, the Board was wise too soon; and to be wise too soon is often equivalent to being foolish.

Mr. Newton devotes some interesting pages to a comparison of the study of education in the older training colleges and in the newer University training departments. We think there is much to be said for some of his implied strictures upon the courses offered in the latter, and especially upon the courses in the history of education. But on the whole we take leave to doubt whether he has grasped the main points at issue. At any rate, let a comparison be made between the current literature of pedagogy, *even on its practical side*, before and after the year 1890, when the University departments were first instituted, and we think that the professors of education may amply claim to have justified their policy of broadening the scope of the subject. We conceive the test to be a perfectly sound one, because the literature in question is a sure indication of the kind of thinking that has gone on in the colleges.

Space does not permit us to indulge in extensive quotation, but there is one passage for which we must find room. "It is hard," says Mr. Newton, "to say exactly what religious teaching the average parent of 1880-1902 really wanted, but my own observation led to the following conclusions. Most parents wished for some religious teaching. Whilst very few demanded definite Church of England teaching, large numbers did not seriously resent it. But for clerical pressure steadily applied, many children would have left the Roman Catholic schools for schools of an undenominational kind. In the main, the parental attitude was one of indifference. I believe that these conclusions hold good at the present day." Mr. Newton is studiously and, indeed, obstinately impartial, and such a judgment is all the more significant.

To be insensible to Mr. Newton's dry humour would be to write oneself down a very dull person. But we are left in doubt as to whether even he perceives the infinite drollery of some of the duties that have fallen to him as an Inspector: that, for instance, of measuring tone and discipline by sixpenceworths—one of the requirements of the "Mundella Code." And, to turn to that which is the opposite of humorous, we feel quite sure that neither he, nor perhaps any other Inspector, ever appreciated adequately the tragic side of "payment by results." The iron never entered into his soul as it did into the souls of those who were teachers and scholars at the time when Mr. Newton started his official career, and who were therefore among the unfortunate victims of Lowe's colossal blunder. That blunder, committed nearly sixty years

ago, has not even yet been lived down. It has affected the educational system as an hereditary taint may affect the physical frame, and its baneful influence is correspondingly difficult to get rid of.

That we place a high value upon Mr. Newton's book is, we trust, proved by our having reviewed its contents at considerable length. The author's long experience, his high official position, and his accurate mental habits, have enabled him to raise a multitude of issues in a form which challenges and deserves the respectful attention of anyone who is interested in English elementary schools. Unfortunately we have seen the last of him as an Inspector. We trust that we have by no means seen the last of him as a writer.

T. R.

THE TEACHING OF ENGLISH.

- (1) *An English Course for Schools.* By S. P. B. MAIS. (6s. net. Richards.) (2) *The New English Books.* By W. J. GLOVER. (Books I, II, 8d. each; Book III, 9d. Philip.) (3) *Outlines of the History of the English Language.* By Dr. E. CLASSEN (5s. net. Macmillan.) (4) *Studies in Literature.* By F. H. PRITCHARD. (2s. 6d. net. Harrap.)

"English" as a subject in the school curriculum has always been an elastic term. But most of us regard it as a definite training in self-expression and mental culture through the study of our native language and literature; and it is upon this interpretation that most of the books enumerated above make their appeal to the teacher of "English." It is obviously desirable to combine from the earliest stages these two strands of training. It is therefore with real pleasure that we see the series of New English Books (2) published by Messrs. George Philip & Son, for they provide a graduated course of English composition based upon sound and delightful literature, worked out upon a concentric plan in such a way that it can be begun and nearly finished in the primary schools. Would that all boys of the age of eleven had already mastered such a course before entering the secondary schools! For they would then have the essential background of technical fundamentals such as punctuation and accidence as well as an imaginative feeling for atmosphere and style. From such a start teachers could lead them on without a break to interests suitable to their maturer age.

Of some of these interests we can judge from Mr. Mais's book (1). Let us say at once that we hope that, in any future edition, Mr. Mais will omit entirely his first two chapters—Grammar and Syntax; Analysis, Parsing, and Synthesis. They are very bad. If the elements of English grammar are to be packed into a few pages, they must be stated lucidly and accurately; we must not be told, for instance, that "the verb 'do' cannot represent 'be,' or an active verb supplied from a passive, nor yet an active verb in a compound tense, gerund or infinitive"; nor must we be told that "a strengthened form of the personal pronoun is to be found in such words as 'yourself,' 'himself,' which are called reflexive." But, apart from these chapters, there is much to welcome in Mr. Mais's book. He has kept his object steadily in view, although he may not realize that his means of attaining it have already engaged the attention of most good teachers. His object "is to stimulate a love of English in the mind of the boy and girl of average ability, to enable them . . . to experience some of the delights that come from the appreciation of good writers, and to rouse in them a desire to emulate the great masters, so that they, in their turn, may write, if not beautifully, at least clearly and concisely." The means on which he relies are choice selections from English literature, chiefly letters, essays, a few poems, and Shakespeare. A few exercises are given on some of the sections. There is also a well chosen list of books, largely from the best known series of cheap reprints, to serve as a basis for a boy's private library. We think that Mr. Mais is rather optimistic as to the literary capabilities of "the boy and girl of normal ability," but we know that nearly everything here depends upon the enthusiasm and personality of the teacher.

The French, we know, have a great tradition in the teaching of the mother tongue. One of their most interesting methods is the *lecture expliquée*, and, of recent years, a good many adaptations of it to English have been published in this country. We have an example before us in Mr. Pritchard's book (4). The selections are well chosen for their purpose, the exercises are often interesting, and the lists for comparative reading are happily drawn up. Two things, however, strike us: that, after working through such a book, a boy will have a rather patchy acquaintance with English literature as a whole, and that the exercises tend to become stilted.

Why, for example, should one be expected to write an essay on rheumatism after reading Pope's "Solitude"? Would it not be better to take selections from an author or a work, and then for the class to examine in detail, under the guidance of a skilful master of his subject, those portions which by such treatment will throw into relief the features of an epoch, of a writer, of a type of literature, or even the underlying principles of all thought and style? But the worst service we can do to the study and the teaching of English is to discourage experiment; let us be grateful to Mr. Mais and to Mr. Pritchard and to Dr. Classen (3) (whose "Outlines" are fascinating in their broadness and in their detail), and wish them, as they deserve, all success in their efforts.

CLASSICS.

"TRANSLATIONS OF CHRISTIAN LITERATURE."

- (1) *Minucius Felix: The Octavius*. By J. H. FREESE. (3s. 6d.)
 (2) *St. Ambrose "On the Mysteries," and the Treatise "On the Sacraments."* By Rev. T. THOMPSON and Dr. J. H. SRAWLEY. (4s. 6d.) (S.P.C.K.)

(1) Very little is known of Minucius Felix, and it is difficult to fix the date of his work, which most scholars place between 160 and 250 A.D. There is a reference in it to Fronto (c. 100-170), and it is closely related to works of Tertullian and Cyprian, but this remarkable book, "a little work of gold," has a value independent of all this. It is a dialogue in the form of Cicero's "De Natura Deorum," in which Minucius himself, a somewhat late convert to Christianity, proposes to act as arbitrator. Caecilius Natalis attacks Christianity, and Octavius, who is visiting Rome from over the seas, defends it. Arbitration is not required, as Caecilius professes himself convinced by Octavius' argument. The work is also a tribute by Minucius to the memory of his friend Octavius, who has lately died. No mention is made of Jesus Christ, or of any of the mysteries or sacraments of Christianity, but it is more in the nature of an eighteenth-century argument addressed to educated and literary circles, of which Caecilius is a typical representative.

(2) These two treatises, by contrast with "The Octavius," deal entirely with "mysteries and sacraments." The authorship of the second is uncertain, but it is clearly of the same period as the first, about 400 A.D. Each consists of a series of addresses given in Easter week to adults baptized on Easter Eve, and they show the great care of the Church in instructing the baptized. Baptism was a much more elaborate ceremony then than it is now, when it is almost a mere form; and all the details are discussed and defended with a wealth of Scriptural quotation. The difference between the Roman and the Eastern ritual is commented on and explained, especially in the custom of the washing of feet at the end of the ceremony. These two editions have adequate introductions and foot-notes.

Lucretius on the Nature of Things.—Translated from the Latin into English Verse by Sir R. ALLISON. (7s. 6d. net. A. L. Humphreys.)

We recommend this book. The translation is remarkably literal without being bald, and the short introduction is excellent. It contains a brief appreciation of the "De Rerum Natura," and handles the few notices of Lucretius in ancient literature so skilfully that the reader can form quite a good conception of the poet; especially good is the account of the condition of Rome when Lucretius wrote. There is an appendix giving several of the maxims of Epicurus from Diogenes Laertius, and another one containing Hobbes's translation of Thucydides' account of the great plague at Athens. The book is beautifully printed and tastefully bound.

Key to Exercises on Rules for Latin Prose. By T. C. WEATHERHEAD. (7s. 6d. net. Cambridge University Press.)

We deprecate the need for the publication of this book. With Mr. Weatherhead's Latinity we have no fault to find; but we cannot help feeling that he and others like him do a disservice to education by producing such books as this, for they merely serve to perpetuate the existence of the incompetent teacher. Of two things one: either a teacher does not need Mr. Weatherhead's help for such elementary work as is covered by the present volume, or he has no business to be a schoolmaster. We have, however, one consolation: the price of the book is high, and schoolmasters are generally poor.

EDUCATION.

Paton's List of Schools and Tutors. (3s. J. & J. Paton.)

The twenty-second annual issue of this invaluable directory will receive a wide welcome. It is well described in a sub-title as an aid to parents in the selection of schools. Particulars of a large number of the best schools for boys and girls are brought together

in a concise and attractive manner, and lists of scholarships and exhibitions obtainable at the public schools are supplied. In addition useful information regarding preparation for the Services and the professions is provided. Parents will be glad to know that the publishers of the volume are able to supply prospectuses of any of the schools dealt with should they desire fuller particulars, and to have an assurance that unusual care has been taken to provide correct information concerning fees. We are sure the directory will secure the wide circulation its completeness deserves.

The Education (Scotland) Act, 1918, with Annotations. Edited by Dr. JOHN STRONG and Others. (4s. 6d. net. Oliver & Boyd.)

The new Professor of Education at Leeds University has marked his resignation from a Scottish Headmastership by publishing, with the help of a team of ten distinguished collaborators, an annotated edition of the text of the recent Scotch Education Act. The names of the commentators give a sufficient guarantee of the trustworthiness of the help they offer to the puzzled layman who attempts to apply the Act. Sometimes, it is true, the inexperienced reader may think that here and there an elucidation appears where it is hardly needed; but anyone who has had occasion to deal with a new Act is only too well aware that it is almost impossible to find a clause about which some one or other will not raise doubts and ask questions. Dr. Strong and his contributors have deserved well of the many officials and others who will have to expound the Act. Two useful appendixes increase the value of the volume: (1) a copy of Circular No. 1, and (2) a complete list of the members of the new Education Committees. There is a satisfactory index.

Catholic Education: a Study of Conditions. By the Rev. Dr. J. A. BURNS. (6s. net. Longmans.)

The conditions referred to in the title apply to America, but English readers will find much here that throws light upon the attitude of Catholics towards education in these islands. While the book is intended primarily for Catholics, Dr. Burns does not confine his appeal to them, and his presentation is sufficiently broad minded to be acceptable to all honest people. It is well to realize that in the year 1915 there were more than a million and a half pupils of elementary grade in Catholic schools in the United States, and 74,538 of secondary grade. It appears that the Catholics are not content with this result, but claim that the enrolment in Catholic schools is not quite half of what it ought to be. The cost of the Catholic schools amounts to over twelve million dollars a year, raised by voluntary contributions, and by next census year this is expected to be twenty millions. Education really costs much more than this, for the Catholic Church obtains the services of religious teachers either gratis or for a purely nominal salary. This gives a great advantage, which, added to the stability of their teaching service, enables enthusiastic Catholics to claim that their parish schools in America will soon be rather better than the public schools. The book contains much valuable and some surprising information for non-Catholic readers.

The Equipment of the Workers. An inquiry by the St. Philip's Settlement Research Society. (10s. 6d. net. Allen & Unwin.)

This volume, the result of investigations carried out by the St. Philip's Settlement Education and Economics Research Society, Sheffield, is more fully described on the title-page as an inquiry into the adequacy of the adult manual workers for the discharge of their responsibilities as heads of households, producers, and citizens. Mr. Fisher was to have written a preface, but for various reasons has felt compelled to cancel his promise; and as the society "has decided that a pilot inferior in standing to the President of the Board of Education is not worth having," the "volume is left to make its own way out to sea." How far this curiously worded decision is due to a sense of Mr. Fisher's merits, and how far to a sense of the Society's merits, we are left to guess. Anyhow, we think the book ought certainly to make its way, because it represents a solid and interesting piece of work, of a kind which is at once new and necessary. The Society finds that, of the male and female adult manual workers of Sheffield, about one quarter are "well equipped," nearly three quarters "inadequately equipped," and about one-fifteenth "mal-equipped," the three classes being otherwise described as rich, poor, and destitute in the spiritual sense. The first part of the book, after dealing with the effects of the war upon the workers, and upon the possibilities of large schemes of adult education, sets forth the method of investigation, and justifies the classification arrived at. The second part consists of extensive studies of representatives of each of the three classes, and the third part of intensive studies of the same. These studies are no less interesting than valuable, especially when one remembers that there is nothing exceptional about the population of Sheffield.

GEOGRAPHY.

Map Reading made Easy. By Capt. C. C. ESSON and G. S. PHILIP. (3s. 6d. net. Philip.)

During the last five years many books on map-reading have been published, largely due to the prominence given to the subject in the training of Army officers. The title of this book accurately describes its aim, for the writers assume that the schoolboy knows little or nothing about the subject and they proceed to instruct him in a most careful and thorough manner. Everything is made as simple as possible both in the descriptions and in the diagrams. The main divisions of the book deal with (a) the relief of the surface with special reference to contours; (b) direction by means of bearings; (c) distance measured on the map by the scale. After studying this book any intelligent boy would be able to do practical exercises in the field from an Ordnance map. Teachers are recommended, therefore, to examine the merits of this book before deciding on any other textbook.

"The Making of the Future."—*The Provinces of England.* By C. B. FAWCETT. (6s. 6d. net. Williams & Norgate.)

This is a thoughtful and well considered study of a most interesting problem—namely, the re-division of England into a number of provinces, each of which should be comparable in resources and population to the other countries of the British Isles. In the earlier chapters the writer gives a brief historical survey to show how the shires and counties originated; he then examines the existing political divisions of England and points out the complexity of the areas into which England is now divided for purposes of its local government, administration of justice, poor law administration, and so on. To bring order into the existing chaos, Mr. Fawcett proposes a division into provinces the areas of which shall be determined largely by the distribution of population at the present time. He therefore marks out each province round a certain centre of population, such as Birmingham, Sheffield, and Newcastle; he then analyses the growth and importance of these towns in relation to their geographical surroundings. An account is given of each of the proposed provinces, its extent, its boundaries, and the factors which make it more or less distinctly a unit area. The establishment of such provinces with simple boundaries closely related to the actual features of the land and the distribution of the people, would render possible a far greater economy of administration than under present conditions. This book is particularly suitable for boys in secondary schools who are taking an advanced course in geography or history.

An Outline of the Geography of the West Indies.

By J. E. BLACKMAN. (3s. net. Blackwell.)

Among the excellent geographies now published, it is somewhat surprising to find one of a type that is quite out of date. The writer of this little book is evidently unacquainted with the works of modern geographers and with the progress that the teaching of geography has made in the last twenty years. In this book the old-fashioned plan is followed of tabulating lists of islands, capes, bays, exports, imports, &c. The historical notes, to which the writer appears to attach some importance, add little interest to the book, for they consist of statements such as, "the island was discovered in 1493," "it was colonized by the French in 1635," and so on.

"Our Own and Other Lands Series."—*The Daughter Lands of Britain.* (2s. 6d. McDougall.)

This book is more suitable as a reading book than as a textbook of geography. Many chapters are devoted to the geography of the various parts of the British Empire, and several sections deal with the history of the Colonies. Two or three passages, quoted from well known authors, make most interesting lessons, such as "How Gold was found in Australia," from Charles Reade's "It's Never too Late to Mend," and "A Fight with Bushrangers," from Henry Kingsley's "Recollections of Geoffrey Hamlyn." In the account of a railway journey across Canada, the description is confined to the Canadian Pacific route; the two other trans-continental railways across Canada should have been mentioned. The illustrations form the most striking feature of the book; the coloured pictures are beautiful, and they are particularly useful because they show typical scenes in great variety. A few maps are inserted. The maps of India and Australia are too detailed for an elementary work, and the Map of the World (Mercator's projection), showing the British Empire in red, gives a misleading idea of the area of India in relation to Canada.

HISTORY.

A History of Spain. By C. E. CHAPMAN. (14s. net. New York: The Macmillan Co.)

The writer of this important and deeply interesting volume is Assistant Professor of History in the University of California. He is intimately familiar with the Spanish language and literature,

and he has qualified himself for the task of interpreting Spain to the world by a two years' residence in the Iberian Peninsula. He treats of the Spanish civilization rather than the detailed course of the political history of Spain, and he does so avowedly in order that he may foster a closer *entente* between the American people and the peoples of the numerous Republics of the Western Hemisphere who derive their culture from Hispanic sources. He has little to say concerning the relation of Spain to the general history of the European Continent. The basis of Dr. Chapman's work is the large and authoritative work of the greatest of living Spanish historians, Rafael Altamira; but a good deal of original research is incorporated. Particularly interesting to English readers is the light thrown on the part played by Spain in the American Revolution.

Days of History. By C. V. CALVERT and B. L. K. HENDERSON. (3s. Methuen.)

Under the title, "Days of History," Messrs. Calvert and Henderson, masters at the Haberdashers' School, have produced a volume of historical sketches which present several novel and instructive features. The sketches are frankly fictitious, but they adhere with the closest possible fidelity to established fact, and they follow a strictly chronological plan. They aim, indeed, at preparing the way for the study of history proper: first, by exciting the interest of the youthful reader, and, secondly, by giving in an easy manner a good deal of authentic information concerning all the leading episodes in the life of the English people. There are thirty-nine sketches in all, and they range from a description of the prehistoric maker of flint implements to an imaginary account of "How I first saw a railway train." The book makes a fascinating reader, its charm being greatly increased for the eyes of children by a dozen vigorous illustrations from the clever pencil of Miss Doris Williamson.

A Survey of Modern History. By H. W. HODGES.

(6s. net. Blackie.)

The period covered by this survey is the century from the Congress of Vienna to the outbreak of the Great War. It is not covered systematically in any sort of order, whether logical or chronological. Rather, its leading features are surveyed and described as they happen to present themselves to the errant eye, particular attention being paid to such as have escaped the eye of previous observers. This book, therefore, is not a textbook so much as a companion to the textbook. It is not so much a history of the nineteenth century as a commentary upon the history. As such it has great value. Mr. Hodges writes from full knowledge and with considerable clarity and skill. His accounts of such familiar processes as the rise of Prussia or the making of Italy do not add much to our textbook information. But when he depicts the development of the United States during the century, the British occupation of India and Egypt, and the chequered history of the Balkan States, he summarizes stories that are less hackneyed, and he gives instruction which is not always easily obtainable elsewhere. Hence Mr. Hodges's survey should be on the reference shelf of every classroom in which recent history is taught.

"The Making of the Future."—*Our Social Inheritance.* By V. BRANFORD and Prof. P. GEDDES. (6s. net. Williams & Norgate.)

This book is marked by great enthusiasm, extreme incoherence, and a new vocabulary. Its aim is to assist in the reconstruction of the world during the period now commencing. It sees the twin evils of "Prussianism and Profiteering" being swept away by "the rising tide of a new vitalism," whatever that may be, and it associates itself with those who find their hope of the future gathering round regionalism, idealism, and civism. The volume consists of three parts that have little or no connexion with one another. The first is entitled "The Past in the Present," and in it is advocated decentralization of government, the break-up of the Great Powers, and a return to the simpler life of small communities. The second part is devoted to "A Survey of Westminster," a study in the growth of a city such as Prof. Geddes develops with expert skill. Oh! that he would keep to this kind of work and avoid "Eutopias," as he calls them. The third part switches the reader off suddenly and violently to "Re-education, National and International." Altogether, the book is a curious hotch-potch, obviously concocted in extreme haste and from no definite prescription.

Citizenship: its Meaning, Privileges, Duties.

By F. R. WORTS. (4s. 6d. net. Hodder & Stoughton.)

The aim of this excellent volume in the "New Teaching" series is stated to be "to help the young student to know and to value both the privileges and the duties of the citizenship which awaits him or her." This aim is admirably achieved. The meaning of citizenship is clearly explained; the privileges are set forth in a

(Continued on page 844.)

PRACTICAL ENGLISH COMPOSITION.

By C. M. GERRISH, B.A., and M. CUNNINGHAM. Adapted and edited for English Schools by E. W. EDMUNDS, M.A. Second Edition. Large crown 8vo. 320 pages. 4s. net. Also Section I. 112 pages. 2s. net. Sections II and III. 224 pages. 3s. net.

A PRACTICAL TRAINING IN ENGLISH.

By H. A. KELLOW, M.A., late Head of the English Department, Allen Glen's School, Glasgow. Second Edition. Crown 8vo, 272 pages, with full Indexes, 3s. 6d. net.

Complete Catalogue and special Prospectus giving full particulars of our recent Books on English will be sent on application.

GEORGE G. HARRAP & CO., LTD.

Directors: GEORGE G. HARRAP & G. OLIVER ANDERSON.

2 & 3 Portsmouth St., Kingsway, London, W.C.2.

manner which is a sound corrective to the ignorant mania for revolution; its duties are emphasized in a way which should effectively stimulate the zeal for social service. The book is divided into four parts. The first describes in twelve chapters the working of the Central Government of the United Kingdom—its Parliament, its executive departments, its judicial establishments. The second treats of Local Government—the various administrative units, their functions, and their spheres of operation. Part three discusses generally "Citizenship and its Privileges," e.g. freedom, security, religious toleration, education, health. The last part is devoted to an enumeration of civic duties and a consideration of the grounds of obligation. The views expressed throughout are sane and moderate. The book is one that should be widely used in continuation schools and in adult reading circles.

MATHEMATICS.

The Analytical Geometry of the Straight Line and the Circle.

By J. MILNE. (5s. Bell.)

This book is intended to be an introduction to the formal study of analytical geometry, and, in view of the difficulties which beginners experience, the author has endeavoured to make the first steps as easy as possible. In the earlier chapters only the simplest equations relating to the straight line and circle are discussed, the more difficult forms being reserved for the later chapters. A distinctive feature of the book is the wealth of numerical examples and of illustrative diagrams, especially in the earlier part, where the stress is laid rather upon the arithmetical evaluation of equations than upon the relationships arising from algebraic form. There is some danger that this numerical work may be given too great prominence. After a boy has worked a couple of examples on finding the angle between a pair of lines, he ought to be able to find the angle between any pair; and it is sheer waste of time to make him work half a dozen. Knowledge of the general formula is the important matter: the rest is mere substitution. We are therefore afraid that, unless the reader works under the direction of a teacher who makes a judicious selection of a very small fraction of the total number of examples given, he will find his progress slow and tedious. The private student will find the examples worked in the text very helpful, and the answers give additional assistance.

Woolwich and Sandhurst Mathematical Papers, 1909-1918.

Edited by R. M. MILNE. (7s. Macmillan.)

The Elementary, Intermediate, and Higher papers set at the examinations for admission into Woolwich and Sandhurst preserve their well known characteristics, but in 1918 a separate paper in arithmetic was added to the elementary papers. Doubtless the authorities have realized that the slipshod inaccuracy which is an unhappy feature of much school arithmetic at the present time requires a corrective. Papers in elementary engineering for Naval Cadets were set for the first time in 1917. Candidates are expected to be able to apply the principles of mechanics to simple structures and mechanisms, and to be acquainted with the action of ordinary types of machinery. Mr. Milne provides answers to the questions.

SCIENCE.

Lectures on Sex and Heredity, delivered in Glasgow, 1917-18.

By F. O. BOWER, J. GRAHAM KERR, and W. E. AGAR. (5s. net. Macmillan.)

In these lectures the leading facts relating to sex in animals and plants are set out with a simplicity and breadth of view which should commend them to a wide circle of readers. The first two lectures deal respectively with the origin of sex in plants and with the effects of a fixed position on the sexuality of plants. In the third lecture the general principles of reproduction in animals, and in the fourth the modifications of the reproductive process entailed by life on land, are considered. In these four lectures the opportunity is taken of emphasizing the evolutionary aspect of the subject, and at the same time of preparing the ground for a discussion, in the fifth and sixth lectures, of heredity, with special application to man. We know of no other book of this size which puts so clearly for the lay mind the essentials of Mendelian inheritance, the question of the transmission of acquired characters, and various other matters on which there is much popular mystification. The book is attractively got up, and contains forty-nine helpful illustrations and a glossary of technical terms. Quite apart from their value to students of botany and zoology, which is considerable, the lectures should do much to focus attention on certain practical problems "which are vastly more vital to the real welfare of the human race than those political questions which usually absorb the energies of governments."

Recent Discoveries in Inorganic Chemistry. By J. HART-SMITH. (4s. 6d. net. Cambridge University Press.)

Mr. Hart-Smith has attempted to produce a live sequel to the

orthodox textbook. To be infallible is one of the essential claims of orthodoxy, and therefore the authors of this class of literature usually include only those statements which have passed unchallenged through the ages. The result is that the painstaking student at the end of his school career is some few decades out of date. This is particularly true of the chemistry of manufacturing processes as described in quite reputable treatises, and perhaps the author of the present monograph at some future date will assist his contemporaries in this direction. Nothing but praise can be accorded Mr. Hart-Smith. He has contributed a series of thoughtful chapters on recent chemical progress, which perhaps the teacher should have accumulated for himself, but which unfortunately the exigencies of time and space forbid. There is an admirable chapter on atomic and molecular structure, which may clarify the reader's ideas on isotopes, the quantum theory, and the structure of the atom. Then follow accounts of recent work in the various groups of the Periodic Classification, describing the progress of inorganic chemistry up to the end of 1917. It is not enough to say that the book should be in the hands of every teacher: it should be embodied in his lectures, and should give a little impetus to his own reading.

Fossil Plants: A Textbook for Students of Botany and Geology.

Vol. IV. By Prof. A. C. SEWARD. (£1. 1s. net. Cambridge University Press.)

This, the final volume of Prof. Seward's great textbook of palaeobotany, concludes his survey of the gymnosperms, dealing with the ginkgoales, coniferales, and gnetales. Although, to students of plant evolution, none of these ancient families has proved so interesting as the extinct cycads, they are of great importance to botanists and geologists alike. The first-named is now represented only by one living species, the maidenhair tree, which probably owes its survival to its cultivation as a sacred tree in the gardens of Buddhist temples. The coniferales, living and fossil, claim some three-fourths of the book, and are discussed in considerable detail. Prof. Seward considers that the araucarineae are both their most primitive and their oldest representatives. Particularly helpful is his criticism of the value, for purposes of classification of extinct conifers, of various vegetative features which have been relied on. Regarding the possible connexion between the gnetales (of which the curious *Welwitschia* of South Africa is the best known example) and the higher flowering plants, the author is non-committal. He does not attempt to deal with the fossil records of angiosperms, because he considers that at present no satisfactory estimate can be formed as to their value. The book is beautifully printed, and contains 190 excellent illustrations. We are glad to learn that Prof. Seward intends to supplement his textbook with a review of the floras of the past as an independent work for general readers.

Elementary Chemistry of Agriculture. By S. A. WOODHEAD. (3s. 6d. Macmillan.)

The author of this excellent preliminary manual has long been connected with agricultural chemistry, and he therefore writes with authority. Faced with the difficulty that most of his readers have little or no knowledge of the elements of chemistry, physics, and botany, he has attempted most successfully to give a few essential ideas at the beginning, and then to deal with others in so far as they are needed in the course. The book is largely experimental, and the student from the outset is brought face to face with facts. The main outlines of the course are: elementary principles and laboratory tests, the feeding and growth of plants, the principles of manuring; nitrogenous, phosphatic, and potassic manures; farm foods, milk and cream, butter, cheese; insecticides and fungicides. The book is admirably printed and illustrated, and should be found a valuable guide for the beginner.

VERSE.

The Measures of the Poets: a New System of English Prosody. By M. A. BAYFIELD. (5s. net. Cambridge University Press.)

English Prosody has long been in a chaotic state. Writers on the subject have confused quantity and stress and the results has too often been a wooden system of scansion that murdered alike quantity and accent, and now Mr. Bayfield has come along to tell us we have been following a false scent, and that even in blank verse the basal foot is not the iambic but the trochaic, and that the trochaic foot is the staple of the bulk of English verse. No doubt this will be a severe shock to the more conservative authorities on the subject; but the proof of the pudding is in the eating and the merit of Mr. Bayfield's system is that it works. No one who reads through the thousands of lines of which he gives the scansion can fail to be impressed by the superiority of his system. Lack of space precludes any detailed account of its main features, but one would especially commend the chapter on Metre and Rhythm. Mr. Bayfield takes us through the whole gamut of English verse,

WM. HUNT'S OXFORD "IDEAL" LOOSE-LEAF EXERCISE BOOK. (Patent.)

WM. HUNT'S Patent "Ideal" LOOSE-LEAF NOTE-BOOK constitutes the best and most convenient Higher Form and Science Class Exercise Book, Lecture Note Book, Loose-Leaf Scrap Book, Storage Covers for Notes, Letters and Papers of all sorts yet invented. The Book opens perfectly flat for writing, and binds up absolutely securely; can be un-made and re-made and the leaves transferred from one book to another or new leaves added in any manner without trouble and without risk of disarrangement or loss. No rings, posts, arches, or mechanism of any sort. Only one book necessary for many subjects, (each subject can be transferred to its own distinctive cover as convenient). 18 sizes and several qualities. Capacity one leaf or 300 with no lost bulk. "IDEAL" for preserving NOTES OF LECTURES and other matter in convenient and easily accessible form.

Showing the Book containing 300 sheets of paper closed. The Divisible Lace is here shown joined, by inserting the Pointed Tag into the Barrel Tag. When the Book is in use the Lace should be joined as above only. When not in use the lace ends may be tied in a bow knot.

Showing the manner of changing leaves. A leaf is shown withdrawn from one Divisible Lace before withdrawing it from the other.

FROM Mr. HERBERT RUSSELL'S List of Books for Students and Teachers.

Concurrent Practical and Theoretical Geometry.

By W. J. POTTER, M.A. (Cantab.), Second Master, Roan School for Boys, Greenwich. Published in Three Parts.

Part I. Lines, angles, parallels, triangles, parallelograms. Contains the substance of Euclid, Book I, 1-34, with additions on Symmetry, Loc. Division of a Line, and Scale Drawing. Crown 8vo, 188 pp. Price 2s. 3d. net.

Part II. Circles, Inscribed and Circumscribed, Polygons, Areas. Contains the substance of Euclid, Books III, 1-34; IV, 1-9, 13-15; I, 35-48; II, 1-14 with additions. Crown 8vo, 249 pp. Price 2s. 6d. net.

Part III. Similar Figures. Contains the substance of Euclid, Books VI, III, 35-37; IV, 10-12 and 16, with additions including a course of Numerical Trigonometry. Crown 8vo, 266 pp. Price 3s. net.

Part IV (in preparation). The Geometry of Space.

Answers to the numerical and graphical examples in Parts I to III.

Price 1s. net.

A Complete Arithmetic.

By M. EASTWOOD, B.Sc., University Extension Lecturer, and formerly Lecturer on Education at the University of Liverpool, and J. LIGHTFOOT, D.Sc., M.A., Author of "Elementary and Intermediate Algebra," &c. Crown 8vo, 588 pp. Cloth 5s. 6d. net.

This book has been specially written for the use of students preparing for those examinations in which the Theory of Arithmetic and Higher Arithmetic generally are subjects. The whole of the matter usually included in elementary and advanced Arithmetic is thoroughly revised. Many improved methods of computation are given. Short methods for rapid work, approximations, and the applications of graphs are fully treated.

An Elementary & Intermediate Algebra.

By J. LIGHTFOOT, D.Sc., M.A. Crown 8vo, 472 pp. Cloth. 4th Edition. With Answers. 5s. 6d. net.

Covers all the Algebra required for the Preliminary and Intermediate Examinations at the Universities. Concrete Examples are introduced from the first, and the powerful Remainder Theorem is introduced early. A special feature is the very clear and interesting treatment of **Graphic Methods**.

Elementary Algebra Part I.

Price 3s. 6d. net.

The Senior Scientific Geography.

By ELLIS W. HEATON, B.Sc., F.G.S. Complete in one volume. Specially suited to the requirements of the Certificate Examination, the Oxford and Cambridge Senior Locals, the London Matriculation, and the Provincial Universities Matriculation. Also published in 8 parts. See catalogue. Crown 8vo, 661 pp., 384 Maps and Diagrams. Price 7s. 6d. net.

The Theory of Music for Students and Teachers.

By J. LIGHTFOOT, M.A., D.Sc., Mus. Bac.

Containing Staff Notation and Tonic Sol-fa. Crown 8vo, cloth, 295 pp.

(New and Enlarged Edition; containing three additional chapters dealing with Suspensions, the Chord of the Dominant 9th, Passing Notes, Sequences, &c., thus bringing the book up to Senior Local Requirements.)

Price 3s. 6d. net.

A Digest of British History.

By S. H. McGRADY, B.A. With an Introduction by OSCAR BROWNING. Crown 8vo, cloth, 320 pp.

Price 3s. 6d. net.

A History note-book on original lines, the great movements, trends, and developments being logically traced, and their influences clearly shown.

Also published in three parts as under:—

Part I.—B.C. to 1485. Part II.—1485 to 1789. Part III.—1789 to 1912. Price 1s. 4d. net each.

Freehand for Teachers & Art Students.

By E. A. BRANCH, Art Master, Central Secondary School, West Ham. Royal 4to, 79 pp. Price 3s. 6d. net.

Contains Thirty-two Photographic Representations, including Inlays, Patterns on Pottery, Textiles, Repoussé, Wrought Iron, Carved Work, and Natural Foliage, together with One Hundred Diagrams of Construction.

The Principles of Model and Common Object Drawing and the Shadow

Treatment of Outline Drawing. By E. A. BRANCH, Art Master, Central Secondary School, West Ham. Royal 4to, 98 pp. (New edition now ready.) Price 4s. net.

Complete Catalogue and Detailed Prospectuses post free on application to

TEACHERS OF GEOGRAPHY. ASSOCIATE, R.S.G.S.

With the object of helping to promote the teaching of Geography in Schools, "Teacher Associates" are admitted to certain privileges of the Royal Scottish Geographical Society at the reduced subscription of Half-a-Guinea. The privileges are limited to the use of the Society's Rooms, receipt of the Quarterly Magazine, the right to borrow from the Library, and one ticket for the Society's meetings. The Magazine will also be sent on the same terms to any School or College on receipt of a signed application from its Head. Prospectus and Syllabus of lectures may be had on application to the SECRETARY, Synod Hall, Castle Terrace, Edinburgh.

THE "POSITIVE" ORGAN IS IDEAL FOR COLLEGES AND SCHOOLS.

It represents the finest value offered in Organ Building, and is a real pipe organ, not an American reed organ.

Over 900 supplied, including many Cathedrals and Colleges all over the world.

Highest testimonials. Send for Catalogue "S."

TEACHERS REGISTRATION COUNCIL.

REPRESENTATIVE OF THE TEACHING PROFESSION.

(Constituted by Order in Council of 29 Feb., 1912.)

The Council desires to make known to all

UNREGISTERED TEACHERS

that

1. The full **Conditions of Registration** will come into force at the beginning of the year 1921. Up to **31st December, 1920**, teachers may be admitted to Registration on proof of **experience alone**, under conditions satisfactory to the Council. After that date proof of **attainments** and **professional training** will be required.
2. The **Official List of Registered Teachers** is now being revised. Entries for the Revised List will close on **Wednesday, 30th June, 1920**.
3. On and after the same date, **Wednesday, 30th June next**, the uniform fee for Registration will be **Two Pounds**, instead of **One Guinea** as at present.
4. Registered Teachers may count their teaching service prior to 1st April, 1919, as **Qualifying Service for Superannuation**, where the service has been accepted by the Council.

Teachers who are not already Registered should complete the form below and post it without delay to the Offices of the Council.

To the Secretary,

TEACHERS REGISTRATION COUNCIL,

47 Bedford Square,

London, W.C. 1.

REPRESENTATIVE PASSAGES FROM ENGLISH LITERATURE. A companion volume to the above. Crown 8vo. 3rd Edition. 3s. net.

A SHORT HISTORY OF ENGLISH LITERATURE IN THE NINETEENTH CENTURY. By W. H. HUDSON. Crown 8vo. 2nd Edition. 3s. 6d. net.

SHAKESPEARE FOR SCHOOLS. Edited by S. P. B. MAIS, M.A., Assistant Master at Tonbridge School. Pott 8vo. With numerous illustrations by BYAM SHAW. Sixteen volumes now ready. 1s. 6d. each.

SHORT ENGLISH TEXTS. Edited by S. E. WINBOLT, M.A., Christ's Hospital, Horsham. Fcap. 8vo. With Biographical and Critical Introductions, and Glossaries where necessary. Twenty-two volumes, covering a wide field of literature. Strongly bound in cloth. 8d. net each.
 [Full List on Application.]

HISTORY.

THE EXPANSION OF BRITISH INDIA. A Source-Book of Indian History, 1818-1858. By G. ANDERSON, M.A., Professor of History, Elphinstone College, Bombay; and M. SUHEDAR, B.A., B.Sc. (Econ.), London, Barrister-at-Law, Professor of Political Economy, University of Calcutta. Demy 8vo. 4s. 6d.

English Historical Review.—"The extracts are well chosen, the comments are sober and judicious, as well as genuinely explanatory. Indeed, we have rarely seen a book of the kind so well done."

ENGLISH HISTORY SOURCE-BOOKS. Joint Editors: S. E. WINBOLT, M.A., Christ's Hospital, Horsham; KENNETH BELL, M.A., Fellow of All Souls College, Oxford. Crown 8vo.
 17 volumes, covering the period from 449-1887. 1s. 6d. net each.

ALSO A SOURCE-BOOK OF LONDON HISTORY.

By P. MEADOWS. 1s. 9d. net.

CANADA. 1535-1913. By JAMES MUNRO, M.A. 1s. 6d. net.

A HISTORICAL COURSE FOR MIDDLE FORMS.

By B. L. K. HENDERSON, M.A., D.Lit., and P. MEADOWS, M.A., Assistant Masters at Haberdashers' Aske's School, Cricklewood. In 4 vols. Crown 8vo, 2s. 6d. each.

Vol. I.—WESTERN EUROPE. 4th Edition.

Vol. II.—THE ENGLISH NATION: INDUSTRIAL AND SOCIAL HISTORY. 2nd Edition.

Vol. III.—THE ENGLISH NATION: CONSTITUTIONAL HISTORY.

Vol. IV.—THE ENGLISH NATION: POLITICAL AND GENERAL HISTORY.

School World.—"The history is good, but the special feature is that at the end of each short chapter are given extracts from contemporary sources, and a few questions based largely on those sources, and requiring thought for their answer. A good idea."

ILLUSTRATED HISTORIES OF ENGLAND.

By GEORGE GUEST, B.A., J.P., Head Master of St. Paul's School, Bournemouth. In three volumes. Crown 8vo.

AN IMPERIAL HISTORY OF ENGLAND. 2s.

Mr. Guest's aim in this book is to explain in simple language "why England engaged in the many wars and voyages of discovery, the result of which has made her one of the world's greatest powers."

A SOCIAL HISTORY OF ENGLAND. 2s. 6d.

Educational Times.—"Will prove a valuable companion to the ordinary history book. . . . An excellent and timely volume."

A CONSTITUTIONAL HISTORY OF ENGLAND.

2s. 6d.

Teacher's World.—"Without doubt it is one of the best books on the subject. . . . It is so clearly written that it will not be difficult for the youngest to understand."

BELL'S HISTORY COURSE.

FIRST LESSONS IN ENGLISH HISTORY. Crown 8vo.

102 pp., with numerous illustrations. 5th Edition. 1s. 6d.

A JUNIOR HISTORY OF ENGLAND. By E. NIXON, late Head Mistress of Junior School, Specialist in History, Ladies' College, Cheltenham. 7th Edition. Crown 8vo. 254 pp., with 66 illustrations. 2s. 6d.

A SENIOR HISTORY OF ENGLAND. By A. E. McKILLIAM, M.A., University of St. Andrews. Crown 8vo. With numerous illustrations. 3rd Edition. 3s.

OUTLINE OF ECONOMICS. By R. E. NELSON, B.A., Assistant Master in Beath Higher Grade School and in Fife Mining School, Cowdenbeath. 2nd Edition. Crown 8vo. Limp cloth. 2s.

GEOGRAPHY.

THE BRITISH EMPIRE BEYOND THE SEAS. An

Introduction to World Geography. By MARION I. NEWBIGIN, D.Sc., Editor of "The Scottish Geographical Magazine." With upwards of 30 Maps. Crown 8vo. 3rd Edition. 4s. 6d.

Intended for use in upper and middle forms, where a rudimentary acquaintance with world geography and more detailed study of the British Islands may be assumed.

Educational News.—"Dr. Newbigin is now recognized as one of our foremost authorities on Geography, and has produced a stimulating book. We cordially commend it to those teachers who desire a manual that will afford much food for reflection and that will vitalize their teaching."

TWO IMPERIAL READERS.

HIGHWAYS OF THE WORLD. A Reader correlating Commercial Geography and Economic History. By A. E. McKILLIAM, M.A. With numerous Maps and Plans. 4th Edition. Revised. 2s.

THE BUILDING OF THE BRITISH EMPIRE. By E. M. RICHARDSON, B.A. Crown 8vo. 3rd Edition. With illustrations, Maps, and Plans. 2s.

IN MANY LANDS. A new series of Geographical Story Readers. By SAMUEL GIMSON. Printed in large, bold type, and illustrated in colour and black and white, chiefly from direct copyright photographs of the scenes depicted. Now ready, Books I and II. 3rd Edition. 1s. 6d. each.
